MALLADI BALASUBRAHMANYAM

THE SNAKE-SIMILE IN SUTTA NIPATA AND SANSKRIT EPICS

1.1 T.W. Rhys Davids made an admirable survey of the social, economic and ethico-religious artifacts of Indian culture in the time of Gautama Budha, and he wrote that it was “in this period that India came nearest to having a *golden age*. And the learned ornate poetry of later times is to the literature of this period what the systematisations and learned commentaries of Buddhaghosa and Samkara are to the daring speculations and vivid life of the early *upaniṣads* and the four *Nikāyas*.”¹

1.2 In my opinion the Indian culture vividly portrayed by the two national Epics of India - the *Rāmāyaṇa* and the *Mahābhārata* (=MBh) - as well as scholastic Pali Buddhism, as enshrined in the oldest canonical texts, paint a picture of the *Second Golden Age* of Indian History. I may mention in this connection that the golden age of Indian history may be marked by three stages in its historical development: Vedic culture in the first stage, Epic and Pali Buddhist civilisation in the second stage and the Gupta era in the third stage.²

1.3 During the second golden age, we see the rise and evolution of *ākhyānas* (> Pali *akkhāṇa*), dialogue verses (*Yakṣapraśna* in Mbh. and the *Ālavakasutta* in the *Sutta Nipāta* Pali), eithical narratives, sacred ballads and the

characteristic refrains or typical repetitive phrases such as *urago jīṇṇam iva tacam purāṇam* in the *Suttanipāṭa* (= SN) Pali and *yathorags tvacam jīṇṇam* in the *Rāmāyaṇa* and again *eṣa dharmah sanātanaḥ* in Mbh., corresponding to *esa dhammo sanāntano* of the *Dhammapada* Pali³ and so on.

1.4 A Sanskritist who is a Buddhistologist at the same time, will not fail to observe the striking identical views between the systems of Pali Buddhism and Sanskrit ethico-religious thought as manifested in the refrains. The Pali ballads in prose and verse such as those sung by rhapsodists (or the *sūtās* in the ancient tradition), comprising numerous popular, bardic ethico-religious material, are referred to under the technical term of *ākhyāna* which is one of the oldest documents in India.⁴ The Sanskrit epics are said to have evolved from this stage of rhapsodic *ākhyānas* such as the *Samkṣepa-Rāmāyaṇa* of Sage Nārada, which grew into the grand epic of Mahārṣi Vālmīki and correspondingly the *Jaya* developed into the greatest epic in world literature as the *Mahābhārata*, via the *Bhārata*. The doctrines relating to *dharma* and *nīti* were superimposed upon the bardic religio-ethical and historical materials sung by the rhapsodists⁵

1.5 The Hindu ascetics and the Buddhist monks of ancient times, who lived abstemiously in every respect, spread the message of human culture from door to door by travelling from one region to the other. Quite in keeping with the *sūta* tradition, they sang the glory of Indian culture through ballad poetry, narratives, sermons and dialogues on *ākhyānas*. That the mellifluous poetry of sage Vālmīki - an *ākhyāna* par excellence - was recited by Śrī Rāma's illustrious twins, Lava and Kuśa in the city of Ayodhyā, as instructed by the epic poet cum seer, Vālmīki, is stated in the *Rāmāyaṇa*; and this is expressed in the following terms:

The Snakesimile

*āścaryam idam ākhyānam
muninā saṃprakīrtitam /
paraṃ kavinā ādhāraṃ
samāptaṃ ca yathākramam //* ⁶

and

*yathoktam ṛṣiṇā pūrvam tatra tatra
abhyagāyatām//* Concomitantly Mbh too is declared an
ākhyāna. I quote the appropriate verse in the
Svargārohaṇaparva (18.5.53) which runs as under:

*mahābhāratam ākhyānam
yaḥ paṭhet susamāhitaḥ /
sa gacchet paramāṃ iddhim
iti me nāsti saṃśayaḥ //*

2.1 The snake-simile, *urago jñṇam iva tacam purāṇam*, occurs as a refrain in SN⁸ in the section entitled, *Uragasutta* which contains 17 stanzas; each stanza ends with the snake-simile cited above. This refrain, in other words, recurs in all the 17 stanzas.

2.2 As a matter of fact, the refrain or the repetitive phrase is a characteristic feature of bardic poetry.⁹ A careful, critical and comparative study of the gnostic poetry of Mbh; and the Pali ascetic poems will clearly indicate that a good number of ethical maxims foreshadowed in the Pali canon is strikingly reminiscent of almost identical views found in Mbh.

A fine example of the snake-simile is cited in the *Uragavagga* of NS. I quote the first verse here:

*yo uppatitam vineti kodham
visatam sappavisam va osadhehi /
so bhikkhu jahāti oraparam
urago jñṇam iva tacam purāṇam //*

This verse is rendered in English as under:

He who gives up anger which has arisen

Like snake-poison diffused through the body, is cured
by medicine,

That monk quits bounds both here and yon

Like a snake which casts off its old decayed skin.

2.3 A striking parallel to the Pāli verse occurs in the *Sundarakāṇḍa* of Vālmīki's *Rāmāyaṇa*. Hanumān, after meeting Sītā in the *Asōka-vana*, set fire to Laṅkā. Later Rāma's messenger was filled with remorse, because he thought that the conflagration might have burnt Sītā too. He was deeply disturbed in his mind for his hasty behaviour or angry temperament with which he acted. Consequently the following thought arose in his mind -

*yaḥ samutpatitaṁ krodhaṁ
kṣamayaiva nirasyati /
yathoragas tvacam jīrṇaṁ
sa vai puruṣa ucyate // (5.55.6)*

According to Hanumān, 'he who gives up anger through forbearance, like a snake casts off its decayed slough, is, indeed, declared to be a great man'. The moral lesson emanating from this verse is that a really great person gives up his anger through forbearance, like a snake abandons its slough.

The same simile occurs in the *Aranyakāṇḍa* of Vālmīki's *Rāmāyaṇa* (3.5.39). The Divine Sage Śarabhaṅga declares to Śrī Rāmacandra that he would not enter into the abode of Brahman (*Brahmaloka*) unless and until he could meet the prince of Ayodhyā. He also declares -

yāvaj jahāmi gātrāṇi jīrṇaṁ tvacam iva uragaḥ /
that 'Rāma should see him for a moment as and when he would abandon his limbs (body) like a snake casting off its old decayed slough'. To put it particularly, the sage wants to give up his body like a snake its old skin. The

Rāmāyaṇa verse (5.55.6c) containing the snake-simile, carries an avowed pedagogical aim or an ethical principle, that is to say, he who gives up anger that has arisen, through the power of forbearance, will be regarded as a real man, just as a snake casts off its old slough.

2.4 Correspondingly the *Mahābhārata* (12,212,48) uses the same snake-simile together with the analogy of a deer abandoning its old horn without looking at it again. To quote the Mbh (*Sāntiparva*, *Mokṣadharmaparva*) verse:

yathā ruruḥ śṛṅgam atho purāṇam
hitvā tvacaṃ vāpy urago yathāvat /
viḥāya gacchaty anavekṣamāṇas
tathā vimukto vijahāti duḥkham //

The two similes enhance the value of the deontological concept that an ascetic, unmindful of craving and other hindrances, casts off suffering like a deer abandons its old horn without looking at it again - or (to use another simile) - like a snake gives up its old worn-out slough.

2.5 The simile of the snake casting off its slough (*urago jinṇam iva tacam purāṇam*) seems to be popular in Pāli ballad poetry as well as in Sanskrit epics. In SN, the simile has been introduced to give importance to the moralistic discipline of a Buddhist monk (*bhikkhu*) that he should renounce 'this world and the beyond' (*orapāraṃ* SN,I,1). It has also been introduced to describe the body at death.

The seventeen stanzas of SN.I.1 show that 'the monk overcomes anger, lust, craving, arrogance, hatred, doubts, perplexities and other impediments. He finds no essence in all forms of being. He sees everything as void being free from covetousness, passion, malevolence and delusion. He eradicates all evil tendencies with no leanings whatsoever towards them. He is free from all such qualities which form the basis for earthly existence, and he destroys all obstacles. He verily is the *bhikkhu* who shuns both

'here and the beyond' as a serpent casts its old and worn-out slough'.¹⁰

It deserves mention in this connection that the term *ura-ga* (belly-crawler) signifies five principles. These are:

- (i) It has superior strength;
- (ii) It has the capacity to change at will;
- (iii) It casts off its slough with ease;
- (iv) It possesses two tongues; and
- (v) It has the capacity to live even in fire.

The *uraga* and fire possess *tejas*.¹¹

A comparative study of the snake-simile found in SN with Sanskrit epics, evidently reveals that early Buddhist ascetics not only used the same traditional floating literary corpus but also made use of the same ethical precepts common to the earlier Sanskrit literature.¹² Correspondingly the riddle poetry, attested in SN such as the *Alavaka Sutta* and other dialogue ballads in which a *yakkha* (= Sanskrit *yakṣa*-) asks questions, has parallels in the *Mahābhārata*.¹³ Furthermore the ballads contain many passages and ideas common to the early *upaniṣads*, as has already been shown by Katre in his book, *Early Buddhist Ballads and their Relation to Older Upaniṣadic Literature*. To put it particularly, besides the similarities that SN bears to the Sanskrit epics, it has much in common with the early *upaniṣads* in form and thought.

3.1 In addition to the occurrence of the snake-simile in the epic texts¹⁴ already cited above, its origin goes back *sensu stricto* to the Upaniṣadic times. It is attested in the *Praśnopaniṣad* (=PU. 5.5) and the *Bṛhadāraṇyakopaniṣad* (=BU. 4.4.7). The former (PU) teaches us that he who meditates on the Supreme *puruṣa* with the utterance of the sacred syllable *OM* - comprising the three moras (*matras*: *a, u* and *m*) - becomes united with the effulgent Sun. He

is freed from all sins, just as 'a snake is freed from its slough'. This is expressed in the following terms in PU.5.5:

*sa punar etaṃ trimātreṇa om ity
etena eva akṣareṇa paraṃ puruṣam
abhidhyāyīta sa tejasi sūrye sampannaḥ /
yathā pādodaras tvacā vinirmucyata
evaṃ ha vai sa pāpmanā vinirmuktaḥ
... puruṣam ikṣate /*

Śaṃkara-bhagavatpāda's commentary on the snake-simile runs as under:

*yathā pādodaraḥ sarpas tvacā vinirmucyate jīrṇa-
tvagvinirmuktaḥ sa punar navo bhavati*¹⁵.

The latter *upaniṣad* (BU) too at IV.4.7 has made capital use of the snake-similitude, and the text reads as under:

*tad eṣa śloko bhavati. yadā sarve pramucyante kāmā
ye asya hr̥di śritāḥ / atha martyo 'mr̥to bhavaty atra
brahma samaśnuta iti. tad yathā ahi-nīrlvayanī valmīke
mr̥tā pratyasthā śayīta evaṃ eva idaṃ śārīram śete atha
ayam aśarīro 'mr̥taḥ prāṇo brahmaiva teja eva so 'haṃ
bhagavate sahasraṃ dadāmi ti hovāca janako vaidehaḥ.*

Śaṃkara-bhagavatpāda's commentary on BU. 4.4.7 is worth quoting here:

*tat tatra ayam dr̥ṣṭānto yathā loke 'hiḥ sarpas tasya
nīrlvayani nirmokaḥ sō ahiḥ nīrlvayanī valmīke sarpāśraye
valmīkādāv ity arthaḥ. mr̥tā pratyastā prakṣiptā
anātmabhāvena sarpeṇa parityaktā śayīta varteta. evaṃ
eva yathāyam dr̥ṣṭānta idaṃ śārīram sarpasthānīyena
muktenānātmabhāvena parityaktaṃ mr̥tam iva śete.*

The central idea contained in BU. 4.4.7 is that, when all the cravings or desires (of death) which abide in the heart or intellect of man, have totally disappeared (along with ignorance which is their root), a mortal becomes immortal; that is to say, he attains immortality (Brahman) here itself.

Just as the lifeless slough of a serpent lies, having cast off in an ant-hill, even so the body lies; and the formless, the immortal *prāṇa* is Brahman, is pure light.

Having shown the ethico-religious or the religio-philosophic significance of the snake-analogy in SN on the one hand, and Sanskrit epics, PU and BU on the other, it is now left for me to raise the pertinent question whether the simile is pre-Buddhistic in origin or it is a Buddhist idea incorporated in Sanskrit epics.

Rhys Davids (loc.cit.) thought that the date of the *Mahābhārata* and of the *Rāmāyaṇa* must be later than the ballad literature, preserved in the Pāli *Nikāyas*. Dahlmann in the *Genesis des Mahābhārata* wrote that 'the date of the poem as composed or compiled by the diaskeuast is certainly not later than the fifty century B.C.' V.S. Sukthankar accepted 'MBh. on the whole as a monument of the pre-Buddhist India'.¹⁶ He was the greatest Indian indologist and founder of the critically constituted *Mahābhārata* (BORI, Bona) in his times. Therefore, I consider his judgement on the dating of MBh as very authentic and final.

4.1 Based on the above valid grounds I regard BU as older than the Pāli ballad poetry (SN and other canonical texts). Consequently the early Buddhist ascetics might have borrowed the snake-simile from the upaniṣadic thought. The typical upaniṣadic simile might have been introduced in Pāli ballad poetry at a time when the germs of a religio-philosophic system came to be more logically and consistently systematised and popularised among Indian literati.

I have reasons to believe that this period may be assigned to 'the second stage of the golden age' of Indian history. This period might have lasted from B.C. 400 to 400 A.D.¹⁷

4.2 The people of this age have worked out a common *weltanschauung* as a result of meticulously practising the

primeval norm or ideal, that is, the *sanātana-dharma* of the Hindus equated with the *sanātano dhammo* of the Buddhists, based on moralistic faith.

5. The basic principles underlying episodical moralism are: cessation of anger, greed, lust, hatred and possessing calmness, desirelessness, fearlessness, forbearance, gentleness, kindness towards all beings (*maitrī* in Sanskrit and *mettā* in Pāli), nonviolence, righteousness, sinlessness, truthfulness and going from 'home to homelessness'.

VARIANT READINGS IN
THE SIXTH CHAPTER OF NĀṬYAŚĀSTRA

It is wellknown that even Abhinavagupta, the famous tenth century author of the *Abhinavabhāratī* commentary on the *Nāṭyaśāstra*, had before him a text that was polluted by many variant readings and interpolations. Recently the present writer had the privilege of examining a well-preserved palm-leaf manuscript of the *Nāṭyaśāstra* in Grantha characters, containing the full text, but without *Abhinavabhāratī*, which has been obtained from the private collection of the great Pandit Chennamangalam Ayyasastrigal of Kerala and now lodged in the Manuscripts section of the Department of Sanskrit, University of Calicut. In many readings Kashi edition (1929) keeps similarity with the text in this manuscript and most of those readings are noted in foot-notes in the Gaekwad edition (1926). Based on this new manuscript, an attempt is made here to study some of the readings in the Sixth Chapter of the *Nāṭyaśāstra*. The following abbreviations are used in this paper:

P - Palm-leaf Manuscript in the Department of Sanskrit,
Calicut University.

N - *Nāṭyaśāstra*, Kāvya-mālā edition, Bombay, 1894.

- K - *Nāṭyaśāstra*, Kashi Sanskrit Series, 60, 1929.
 G - *Nāṭyaśāstra*, with *Abhinavabhāratī*, Gaekwad series, Baroda, 1926.
 B - *Nāṭyaśāstra*, with *Abhinavabhāratī* and *Madhusūdanī*, Banaras Hindu University, 1971.
 C - *Nāṭyaśāstra*, Chowkhamba edition, 1972.
 M - *Nāṭyaśāstra*, with Malayalam Translation by K.P.N. Pisharoti, Kerala Sahitya Akademi, Trichur, 1971.
 A - *Abhinavabhāratī*, Benaras edition, 1971.

We may divide the readings into three groups:
 I. new and significant readings, II. readings which are not much important, and III. interpolations.

I. NEW AND SIGNIFICANT READINGS

1. Title of the Sixth chapter

रसविकल्पः - P, K, M. - रसाध्यायः A, C, N, G.

2. Verse i.

किन्त्वल्पसूत्रगूढार्थ-

मनुमानप्रसाधकम् P, K

..... ग्रन्थार्थः N, B, C, M, A.

सूत्रग्रन्थयोर्लक्षणपरीक्षयो-

र्योऽर्थो लक्ष्यपरीक्षितव्यलक्षणः

सोऽल्पः संकुचितो नाममात्रेण

देश्यतया यत्र (A, p. 599)

Gūḍhārtha is natural, though one cannot escape the scientific explanation of Abhinava.

3. Verse ii.

सूत्रतः सा तु विज्ञेया

-

सामुपलब्ध्या

N;

कारिकार्थप्रयोगिनी

P, K, C, M.

सामुपलब्ध्या

B.

“तत्सूत्रमपेक्ष्य या अनु पश्चात् पठिता
श्लोकरूपा सापि कारिका” (A, p.
603)

A seems to be highly artificial.

4. तत्र रसानेव तावदादा- - अभिव्याख्यास्यामः
वभिधास्यामः P. K. N, B, C, M.
“अभितः आदितः सूत्रग्रन्थ-
परीक्षाक्रमेण विभज्याख्यास्यामः”
(A, p. 619)

It is certain that A had influenced later scribes and editors.

5. न हि रसादृते कश्चिदप्यर्थः - कश्चिदर्थः
प्रवर्तते P. K. N, B, C, M.
This new reading is more apt and appropriate.
Moreover on another occasion, Abhinava quotes this
sentence with the reading कश्चिदप्यर्थः (p.691). Though
B follows A rather blindly, it does not accept this
reading.
6. यथा गुडादिभिर्द्रव्यैर्व्यञ्जनै- - षाडवादयो रसाः
रोषधिभिश्च षड्रसा निर्वर्त्यन्ते P, K. N, B, C, M.
“षाडवादय इति लोकप्रसिद्धेभ्यः
परस्परविविक्तेभ्यो मधुरतित्ताम्ल-
लवणकटुकषायेभ्यो मिश्रेभ्यश्च
विलक्षणा षाडवशब्दवाच्याः” (A.p. 619)

7. एवं नानाभावोहिता अपि नानाभावोपहिता अपि K.
स्थायिनो भावा रसत्वमाप्नुवन्ति।P नानाभावोपहिता अपि-N,B,C,M.
This new reading भावोहिता (नानाभावेभ्यः विभावानुभावव्यभिचारिभ्यः
ऊहिताः स्थायिभावः) is a very appropriate one which
gives a clue to *anumāna* that is an essential means
to *rasa* realisation even according to the

Abhivyaaktivāda, in its early stage. The commentary on *upagata* by Abhinava seems to be rather laboured.

3. ऋषय ऊचुः - रस इति कः अत्राह-रस इति कः पदार्थः।
पदार्थः? आस्वाद्यत्वात्किम्? उच्यते-आस्वाद्यत्वात्। कथमा-
इति चेत्, अत्रोच्यते P. स्वाद्यते रसः। N,K,B,C,M,A

Here, in the extant reading, the answer “*āsvādyatvāt*” puts forward some problems before us. A faces it with some difficulty: “अत्रोत्तरम्। आस्वाद्यत्वात्। प्रवृत्तिहेतोर्यतः प्रश्नः तेनोत्तरं हेतुविभक्त्या दत्तम्। तेन क्रिया प्रवृत्तिनिमित्तमस्येत्युक्तं भवति।अथ प्रवृत्तिनिमित्तं व्याक्षिपति-कथमास्वाद्यत इति” (pp. 679, 681).

These problems will be solved if we accept the new reading.

9. भावाभिनयसंयुक्तान् P.संबद्धान् N,B,C,M,A.
....संयुक्ताः K.

Abhinava says on this: “तैर्यैः सम्यग्बद्धा हृदयसंवादक्रमेण तन्मयीभावापन्नप्रमातृभूम्यभेदमुपसंप्राप्ता अचिन्त्या स्थायिनः” (p.683). This proves that the reading accepted by A might have influenced others. But it is to be noticed that in the *rasasūtra* itself the expression is *saṃyoga*. It is therefore appropriate to read *saṃyuktān* in this context also.

10. परस्परसम्बन्धदेषामभिनिवृत्तिरिति। Omits तत् कस्मात् N.

तत् कस्मात्? दश्यते..... P. तन्न । कस्मात्? K,B,C,M,A.

Here there are three views on the relationship between *bhāva* and *rasa*. All these are taken into consideration and accepted by Bharata in the following verses. So it is not proper to answer it in the negative as *tan na*. But it is only natural to seek for an explanation for these three apparently contradictory views as *tat kasmāt*? Therefore the new reading seems to be much more correct. Abhinava’s explanation itself is some-

what contradictory: “इत्येवं पक्षत्रयोत्थानम्। इदं चासत्। एवंभूतस्य रसस्वरूपस्य निराकृतत्वात्” (A. p.687). Who rejected this kind of *rasa* realisation? Bharata or Abhinava himself? Moreover he himself concludes the section saying that all those three views are however acceptable with some variation in their meanings: “एवं त्रयोऽपि पक्षाः कथञ्चिदुपगता अभिप्रायत्रैविध्येनेति तात्पर्यम्” (A. p.692).

. Verses 39,40

After करुणो रसः add:

शृङ्गाराब्धि भवेद्धास्यो	वीराच्चैवाद्भुतोत्पत्तिर्बीभत्साच्च
रौद्रात्तु करुणो रसः।	भयानकः।
वीरस्यापि च यत्कर्म	शृङ्गारानुकृतिर्या च स हास्यस्तु
सोऽद्भुतः परिकीर्तितः ॥	प्रकीर्तितः ॥
बीभत्सदर्शनं यच्च	रौद्रस्यैव च यत्कर्म स ज्ञेयः
भवेत्स तु भयानकः ॥ P	करुणो रसः ॥

K has also this reading. N, K, B, C, M, A

According to the existing reading there is repetition because the second verse is only an elaboration of the first. Commenting on these verses, Abhinava however explains eight kinds of *utpādyotpādakabhāva*, and thus he suggests that the second verse is not merely an explanation of the first. The relevant portion of his commentary may be cited here: “तेषां रसानामुत्पत्तौ हेतवः सूचकाश्चत्वारः। रसानामुत्पाद्योत्पादकप्रकारो यावान् संभवति स चतुर्भिश्च सूचित इति यावत्। (Then the first verse is enough!) तथा हि तदाभासत्वेन तदनुकाररूपतया हेतुत्वं शृङ्गारेण सूचितम्....(१)। यदीयफलानन्तरं द्वितीयरसोऽवश्यंभावी। तस्योदाहरणं रौद्रः(२)। यस्तु रसो रसानन्तरं फलत्वेनाभिसन्धाय प्रवर्तते तस्योदाहरणं वीरः(३)। यस्तु रसः तुल्यविभावत्वात् नियमेन रसान्तरं हि परमाक्षिपति तस्योदाहरणं बीभत्सः(४)। ...एवं तदाभासद्वारेण रसान्तराक्षेपकत्वे शृङ्गार उदाहरणम्(५)। ...परस्पराफलत्वेन रसान्तराक्षेपे

रौद्र उदाहरणम् (६)। ... समनन्तरफलत्वेन रसान्तराक्षेपे उदाहरणं वीरः(७)। ... सहभावेन रसान्तराक्षेपे बीभत्स उदाहरणम् (८)।” (pp. 694-701).

It can easily be seen that the last four varieties respectively are the same as those described as the first four. Abhinava's explanation is so unnatural that it cannot give separate examples for the last varieties. But he has got success in his attempt to insert his view on *rasābhāsa* in this context (vide pp.614-5). It may however be assumed that behind the addition of the above six lines A's influence can be seen.

12. Description of *Śṛṅgāra*:

...तदेवमेष गुर्वाचारसिद्धो हृद्यो— एवमेष आचारसिद्धो हृद्यो—
ज्ज्वलवेषात्मकः शृङ्गारो रसः। ज्ज्वलवेषात्मकत्वाच्छृङ्गारो
P, N. रसः B, C, K, M, A.

Śṛṅgāra is recognised not only by *ācāra* but it is sanctioned by *gurus* (preceptors like Brahman) also. So the expression *ācārasiddha* is not enough. Perhaps the original reading was sunk into oblivion when the A thereon gained popularity. A on the passage runs thus: “एवं शृङ्गारो रसः। स आचाराद् व्यवहारात् लोकेऽपि सिद्धः। कुतो होतो? हृद्यादिवेषात्मकत्वात्।” (p.707)

13. *Vyabhicāribhāvas* of *Śṛṅgāra* in its two stages are not given in P.

They are given in others thus:

व्यभिचारिण(स्त्रासा)लस्यौग्रजुगुप्सावर्जम् (वर्ज्याः, वर्गाः)। विप्रलम्भ—
कृतस्तु निर्वेदग्लानिशङ्कासूयाश्रमचिन्तौत्सुक्यनिद्रासुप्तस्वप्न—
विष्वोक(विबोध)व्याध्युन्मादापस्मारजाड्यमरणादिभिरनुभावैरभिनेतव्यः।
(N, K, C, M)

व्यभिचारिणश्चास्यालस्यौग्रजुगुप्सावर्जाः। विप्रलम्भकृतस्तु

निर्वेदग्लानिशङ्कासूयाश्रमचिन्तौत्सुक्यनिद्रास्वप्नविबोधव्याध्युन्मादापस्मार-
जाड्यमरणादयः। (B, A)

The enumeration of these *vyabhicāribhāvas* is not necessary because it is implied in the context that all the thirtythree *vyabhicāribhāvas* are *vyabhicārins* of *śṛṅgāra*. Hence the subsequent question about the difference between *karuṇa* and *śṛṅgāra* and the answer pointing out the *vipralambha* aspect of *śṛṅgāra*. Only if we accept this new reading the suggestion made by Bharata of the peculiarity of *śṛṅgāra* that it is a combination of all *bhāvas* (*evam eṣa sarvabhāvasamyuktaḥ śṛṅgāro bhavati*, p.726) can be justified. This will, on the other hand, be utterly contradictory if we do not consider the passage giving the *vyabhicāribhāvas* of *śṛṅgāra* as spurious.

We may examine the passage enumerating the *vyabhicāribhāvas*. In some of the versions *trāsa* is also excluded from the *vyabhicārins*. *Vyabhicāribhāvas* of *vipralambha-śṛṅgāra* are changed into *anubhāvas* also. All this indicates only the fact that the absence of *vyabhicāribhāvas* of *śṛṅgāra* in old manuscripts created confusion among scribes or editors and hence the addition of this intricate and rather contradictory list of *bhāvas* to the original text. Now we may take the four *bhāvas* which are excluded in *śṛṅgāra*. *Trāsa* can be omitted since there is no consensus about it among those who accept the passage in question. How can one exclude *ālasya* from being *vyabhicārin* of *vipralambha-śṛṅgāra*? *Augrya* or *ugratā* is also allowed by Abhinava who says that *śṛṅgāra* with an aggressive turn can also be well appreciated “(*śṛṅgāras tu prasabham sevyamānaḥ sambhāvyata eva*, A, p.779)”. Bharata himself suggests the same when he observes that each and every action of demons and other naughty personalities is horrible (*raudra* or *ugra*: *yac ca kiṃcit*

samārabhante svabhāvacestitam vāgaṅgasatvādikam tatsarvaṃ raudram evaiṣām, p.746).

According to some versions there is an additional sentence which gives strong support to our idea: “*śṛṅgāras’ca taiḥ prāyaśaḥ prasabham sevyate, ibid).* *Jūgupsā* is a *sthāyibhāva* and there is no meaning in excluding it from being a *vyabhicārin* of a *rasa*. Perhaps this very point was the instigation for the advocates of *sāntarasa* who propose to make *nirveda*, one of the *vyabhicāribhāvas*, the *sthāyin* of *sānta*, because they were in want of a sanction from Bharata for attributing the *sthāyitva* to a *vyabhicāribhāva*. We can see citation of this sanction in the *Śāntarasaprakaraṇa* of A: “जुगुप्सां च व्यभिचारित्वेन शृङ्गारे निषेधन्मुनिः भावानां सर्वेषामेव स्थायित्वसञ्चारित्वचित्तजत्वानुभावत्वानि योग्यतोपनिपतितानि शब्दार्थबलाकृष्टान्यनुजानाति” (p.764). Abhinava gives in the *śṛṅgāra* section itself this clue: “जुगुप्सा स्थायिन्यपीह निषिद्धा न्यायसिद्धं स्थायिनामपि व्यभिचारित्वमनुज्ञापयति।” (p.718).

14. *Vibhāvas of Hāsyā:*

स	विकृतवेषालङ्कारधाष्टर्य—विकृतवेष	— M
लौल्यकलहासत्प्रलापव्यङ्ग्यचदर्शन.....P,K		विकृतपरवेष	..
		लौल्यकुहकासत्प्रलाप..	
		N, B, C, M, A	

Hāsyā can be brought out without the wearing of the costumes of another one. So *para*’s is not necessary. There are petty quarrels which cause humour as can be seen sometimes in the conversations between *Vidūṣaka* and *Nāyaka*. *Kalaha*, therefore, should not be deleted. However, the existing reading gained popularity because of the influence of A: “परस्य सम्बन्धी परः। एवभूतो देवदत्तस्य वेषोऽयमलंकारो वा इत्युद्धट्टकभाण्डनृत्तादौ

दृश्यमानौ।.... कुहकं कक्षाग्रीवादस्पर्शनं विस्मापनविधिप्रसिद्धं बालानाम्” (p.731).

‘Kuhaka’, as Abhinava himself explains, brings out *vismaya* only; that too for children. How can it then be a *vibhāva* of *hāsyā*?

15. *Anubhāvas of Hāsyā*:

तस्योष्ठदशननासाकपोलस्पन्दन.... Omit दशनN, B, C, M, A.
रनुभावैरभिनयः प्रयोक्तव्यः।P,K “ओष्ठादेः स्पन्दनशब्देन
सम्बन्धः।”(A.p. 732).

Throbing of lips is not so natural as that of a nose or temple as far as humour is concerned. To bite one's lips to conceal some moods appears appropriate to the context.

16. *Verse 61*:

एवमात्मसमुत्थं च (? तथश्च) इत्येष	
तथा परसमुत्थितम् (? तः)।	स्तथा परसमुत्थश्च विज्ञेयः।
द्विविधस्त्रिप्रकृतिकः	द्विविधस्त्रिप्रकृतिगत—
षड्भेदोऽथ रसः स्मृतः ॥	स्त्रयवस्थभावो रसो हास्यः ॥
P, K, M.	N, B, C, A.

Commenting on verse 52 Abhinava says: “तस्मात् संक्रमणा—
भिप्रायेणैतत्। स्मितं हि यदुत्तमप्रकृतौ तत्संक्रान्तं हसितं सम्पद्यते।
अत एव त्रयवस्थो हास इति वक्ष्यते।” (A, p. 734).
Behind this correction Abhinava has his own purpose
to present his view on the *saṃkramaṇa* character of
hāsyarasa (see A, pp.732,3).

17. *Vibhāvas of Raudra*:

क्रोधधर्षणाधिक्षेप....	क्रोधाकर्षण — M.
वाक्पारुष्यद्राह....	क्रोधाधर्षण...रुष्यभिद्रोह—
P, K.	N, B, C, M, A.
	“आधर्षणं दारादिखिलीकरणं.... अभिद्रोहो जिघांसा..”(A,p. 742)

The P,K reading is simple and natural.

18. After

तत्सर्वं रौद्रमेवेति....P, K. Add “शृङ्गारश्च तैः प्रायशः
प्रसभं सेव्यते।” N, B, C, M, A.
“सर्वमिति यदुक्तं तत्स्फुटयति-शृङ्गारश्चेति। शृङ्गार शब्देनात्र तद्विभावः।
प्रमदोद्यानादिः । सोऽपि तैः प्रसभमिति कूराकारतया सेव्यते। यत्रौग्रस्य
वर्जनमुक्तं किं पुनरन्यदिति चशब्दस्यार्थः।” (A, p.746).

This is only an explanation of the preceding statement as has been pointed out by Abhinava and is likely to have been added by later scribes.

19. *Vibhāvas of Bhayānaka*

सत्त्वदर्शनशिवोल्कात्रास.... P. शिवोल्कात्रास....
K,N,B,C,M,A.

How can the fear from an owl (*ulūka*) be a *vibhāva* of *bhayānaka*? This seems to be merely childish! The fear from a comet (*ulkā*) which is believed to be a bad omen is, on the other hand, very appropriate to be considered among the *vibhāvas* of the horrible sentiment. It is possible that scribes or editors might have mistaken the word *ulūka* for *ulkā*.

20. *Anubhāvas of Bhayānaka:*

प्रवेपितकरचरणनयनचलनपुलक.... ..नयनचपल..
P, K, M. N, B, C.

Here *capala* gives no proper sense whereas *calana* is very significant and more welcome.

21. *Vibhāvas of Bībhatsa:*

स चाह्वाप्रियाचोक्षानिष्टश्रवण- .. अप्रियावेक्षानिष्ट.. N,K
दर्शनपरिकीर्तनादिभिः.... P,M. .. अप्रियाचोष्यानिष्ट.... B,C,A.

A might have been the source of this well-publicized

correction. Abhinava differentiates all these expressions very dexterously as follows: “हृदयस्यापि किञ्चित्कस्यचिन्निसर्गोऽप्रयतं लशुनमिव द्विजानाम् यथा श्लेष्मोपहतस्य क्षीरम्। अप्रियं पित्तादिदोषात् । अक्षेप्यं स्वरूपेणादुष्टमपि तु मलाद्युपहतम्...।” (A. p.756). Any how *acokṣa* also gives the same meaning as that of *acokṣya*; but it might not have been clear to later scribes and hence corrections like *acokṣa*!

22. Anubhāvas of Bībhatsa:

तस्य सर्वाङ्गहारं	1.	
हल्लेखननिष्ठीवनोद्वेजनादिभिरभिनयः		हल्लेखनिष्ठीवने -K
प्रयोक्तव्यः - P.		...सर्वाङ्गसंहारमुखविकृण्णे-
		ल्लेखलनिष्ठीवल्ले-
		N, B, C, M, A

That the stress is given here on all kinds of actions on the face and eyes, is gone away by accepting the later readings. *Bībhatsa* has some similarity with *raudra*. In *raudra*, Bharata presents *anubhāvas* occurring in two levels (तस्य च ताडनपाटन...सधिराकर्षणद्वानि कर्माणि (कार्याणि-पा)। पुनश्च रक्तनयन...रजुभावेरभिनयः प्रयोक्तव्यः। (pp.741-2).

Similar is the description of *anubhāvas* of *bībhatsa*.

23. Vyabhicārins of Bībhatsa:

व्यभिचारिभावश्चास्यापस्मारग्रह-	व्यभिचारिभावश्चास्याप-
चेष्टितवेगमोहव्याधिमरणादयः। P	स्मारवेगमोह.... K
	भावाश्चास्य...
	पस्मारोद्देगावेगमोह.... B, C, M.
	...पस्मारावेगमोह.. M

It appears that scribes of later periods could not understand the meaning of the expression ‘*grahaceṣṭita*’ which is something like ‘*bhūtāveśa*’.

24. Verse 74:

मुखनेत्रविकूणननयननासा- ...नेत्रविघूर्णननयन.. K, C.
 प्रच्छादनावनमितास्यैः P मुखनेत्रविकूणनया नासा.. N.B.M.

‘Nayana’ in the original text might have been mistaken as ‘naya’.

25. Anubhāvas of Adbhuta:

...हाहाकारकरचरणाङ्गलि- ..ज्ञांकारचेलाङ्गलि... N
 भ्रमणादिभिः.... P, K ..हाहाकार बाहुवदनचेलाङ्गलिB, C, M.A.

What is meant by *celāṅguli*? *celāṅcala*? That is very unnatural. *Karacaraṅgūlibhramāṇa* is a quite happy one that easily gives clear sense.

26. Verse 75:

यत्त्वतिशयार्थयुक्तं वाक्यं शिल्पं for शील-N, B, C, M,
 A
 शीलं च कर्म रूपं च। ..कर्मरूपं.. B, A
 एभिस्त्वर्थविशेषै रसोऽद्भुतो Second half: तत्सर्वमद्भुतरसे
 नाम विज्ञेयः P, K विभावरूपं हि विज्ञेयम्
 N, B, C, M, A.

Abhinava's commentary on this runs as follows, “...यद्वाक्यं यच्च शिल्पं कर्मरूपं कर्मात्मकं ‘प्रशंसायां रूपम्’। सर्वं ‘मित्येवंप्रकारमिति यावत्। (p.758). A's influence in the popularity of the existing reading need not be mentioned.

27. Verse 76:

स्पर्शग्रहोत्कहसनैः P, K स्पर्शग्रहोल्लुकसनैः N.
 स्पर्शग्रहोल्लुकसनैः B, C, M, A

Utkahasana is better. It means the laughter mixed with anxiety or wonder. Abhinava, however, explains: उल्लुकसनं- “गात्रस्योर्ध्वं साह्लादं धूननमुल्लुकसनम्” (p.759).

28. Verse 77:

शृङ्गारं विविधं विद्यात् ...वाङ्नेपथ्य.. N, K, B, C, M.
भूनेपथ्यक्रियात्मकम्। P

The role of eye-brows in the erotic along with attractive dress and love-making actions is duly recognised in this appropriate reading.

29. Divisions of Karuṇarasa:

Verse 78: तथा शोककृतश्चैव N, K, C, M, A.
..तथायोगकृतश्चैव.. P. B.

..शोकशब्देन स्वजनादिनाशश्च एते त्रयो
विभावाः” (A, p. 759).

Are not all the three kinds of *karuṇa* produced from *śoka*? Then what is particular about the third variety, *Śokakṛta*? Therefore ‘*ayogakṛta*’ (caused by separation) is good.

II. READINGS WHICH ARE NOT MUCH IMPORTANT:

1. Verse 1 पञ्च प्रश्नान् ब्रवीहि नः P, K.
प्रश्नान् पञ्चाभिधत्स्व नः G, B, C, M, A.
प्रश्नमह्यं (?) वदस्व नः N.
2. Verse 2 रसत्वं केन वा तेषाम् P, K. ...वै...N, G, B, C, M, A.
3. Verse 3 निरुक्तं चाभिधत्स्व नः P, K.
..चैव तत्त्वतः N, G, B, C, A. ..च यथाक्रमम् M.
4. Verse 6 न शक्यमिह नाट्यस्य P, K.
..शक्यमस्य N, G, B, C, M, A.
5. Verse 7 एकस्यापि न वै शक्यम् P, K, G, M.
...शक्यस्त्वन्तो B, C.
6. Verse 8 किं पुनः (पुनः किं) सर्वेषां P, K.
ज्ञानानामर्थतत्त्वतः P, K, G.
पुनरन्येषां N, G, B, C, M. ...तन्त्वतः B, A.
7. Verse 10 धर्मिवृत्तिप्रवृत्तयः P, K, M. धर्मी वृत्तिः... N, G, B.
8. Verse 10 कारिकार्थप्रयोगिनी P, K. प्रदर्शिनी... N, G, B, C, M.

48. Verse 58 अस्थानहसितं यत्र साम्रनेत्रं .. P, K.
... यत्तु साश्रुनेत्रम् N, G, B, C, M.
49. After verse 61 तस्य चाश्रुपातनपरिदेवनमुखशोषण.. P, K.
तस्य चाश्रुपात..N, G, B, C, M. तालुमुखशोषण.. B, M, A.
50. Verse 62 विप्रियवचनस्य संश्रयाद्वापि P, K.
संश्रवाद्वापि N, G, B, C, M, A.
51. Verse 63 सस्वनरुदितैः P, G, B, C, M. श्वसनविरुदितैः N, K.
52. Verse 63 मोहोद्गमैश्च P, K. मोहागमैश्च N, G, B, C, M.
53. After verse 63 रुधिराम्राकर्षणाद्यानि P, K. रुधिराकर्षणाद्यानि G, B, C, M.
54. Verse 63 भ्रुकुटीकरदन्तोष्ठपीडन P, K.
टीकरणद..... N, B, C. टीकरणावष्टम्भ... M, G.
55. Verse 63 गण्डचालन P. गण्डस्फुरण N, K, G, B, C, M.
56. Verse 63 व्यभिचारिणश्चास्य P, K.
भावाश्चास्य N, G, B, M, A.
व्यभिचारिभावाश्चास्य C.
57. Verse 63 राक्षसादीनाम् P, K. दानवादीनाम् N, G, B, C, M.
58. Verse 63 स्वभावत एव रौद्राः। बहुबाहवो बहुमुखाः P, K.
After these sentences add कस्मात् N, G, B, C, M.
59. Verse 63 वागङ्गादिकं वा P, K. Omit वा N, G, B, C, M.
60. Verse 63 रौद्रमेवेति P, K. रौद्रमेवैषां N, G, B, C, M.
61. Verse 63 संप्रहारकृतो P, K. संग्रामसंप्रहारकृतो N, G, B, C, M, A.
62. Verse 64 सत्त्वप्रहार P, K. युद्धप्रहार N, G, B, C, M, A.
63. Verse 65 नानाप्रहरणसंकुल P, K. प्रहरणमोक्षैः N, G, B, C, M.
64. After verse 66 अत्र अनुवंश्ये आर्ये अत्रार्ये रसविचारमुखे
P, K. N, G, B, C, M, A.

III. INTERPOLATIONS

A few instances of interpolations have already been pointed out; but they are not recognised as such so far by well-known critics. Now we may take other instances of interpolations that are considered so by many.

1. Addition of *prakṛti* and *upacāra* to the well-known eleven *Nāṭyaśāṅgrahas*:

रसा भावा ह्यभिनया धर्मिवृत्तिप्रवृत्तयः।

सिद्धिः स्वरास्तथातोद्यं गानं

(गानं रङ्गश्च संग्रहः is the original reading.)

उपचारास्तथा विप्रा मण्डपाश्चेति सर्वशः।

त्रयोदशविधो ह्येष ह्यादिष्टो नाट्यसंग्रहः ॥ M. pp. 195 - 6.

G and C also give the second verse in brackets (p.266, p.215). Consequently after the description of *gāna* there is a verse enumerating *prakṛti* and *upacāra*:

उत्तमाधममध्या च प्रकृतिस्त्रिविधा स्मृता।

बाह्याभ्यन्तरसंभूतमुपचारद्वयं भवेत् ॥ M. pp. 199-200

G also gives this verse in brackets (p.272).

2. Description of *Śāntarasa*:

After the description of even the divisions of *rasas*, the whole *prakaraṇa* - beginning with *atha śānto nāma śamasthāyibhāvātmaḥ mokṣappravartakaḥ* is seen in G (pp.333-336), B (pp. 762-3,777-8), C (pp.350-364) and M (adds in the beginning: *śāntam idānīm vyākhyāsyāmaḥ*, pp.222-223). Abhinava also is aware of this description of *santa* but he does not seem to accept it in total (vide: *Śāntarasaprakaraṇa* in A, pp.762-80). According to Abhinava the description of *Śānta* itself occurs just after the statement, “स्थायिभावांश्च रसत्वमुपनेष्यामः। तथा च चिरन्तनपुस्तकेषु स्थायिभावान् रसत्वमुपनेष्यामः इत्यनन्तरं शान्तो नाम शमस्थायिभावात्मकः इत्यादि शान्तलक्षणं पठ्यते।” (For details on this problem, vide Dr.Raghavan, *The Number of Rasas*, Adyar Library Series, third revised edition, 1975; J.L. Masson and M.V. Patwardhan, *Śāntarasa and Abhinavagupta's Philosophy of Aesthetics*, Bhandarkar Oriental Research Institute, 1969.)

In addition to this, the following expressions are also interpolated in connection with *śānta*:

a) बीभत्सान्दुतशान्ताश्च नव नाट्यरसाः स्मृताः B.

- बीभत्साद्भुतसंज्ञौ चेत्यष्टौ P, K, N, C, M.
 तेन प्रथमं रसाः। ते च नव। शान्तापलापिनस्तु अष्टाविति तत्र पठन्ति।
 (A, p. 612)
- b) एते नव रसाः प्रोक्ता द्रुहिणेन महात्मना B. त्यष्टौ P,K,N,C,M.
 c) जुगुप्सा विस्मयश्चेति स्थायिभावाः प्रकीर्तिताः। No edition gives *vismayasamaḥ*. But A indicates about this : “तत्र शान्तस्य स्थायी विस्मयशमाः इति शमः कैश्चित् पठितः” (A. p. 613).
 d) स्वच्छपीतौ शमाद्भुतौ B. पीतश्चैवाद्भुतः स्मृतः P, K, N, C, M. “स्वच्छपीतौ शमाद्भुताविति शान्तवादिनां पाठः” (A, p. 701).
 e) बुद्धः शान्तेऽब्जजोऽद्भुते B. अद्भुतो ब्रह्मदैवतः P, K, N, C, M. बुद्धः शान्तेऽब्जजोऽद्भुते इति शान्तवादिनः पठन्ति।” (A.p. 702).
 f) एवमेते रसाज्ञेया नव लक्षणलक्षिताः B, C, A.
 एवमेते रसा ज्ञेयास्त्वष्टौ लक्षणलक्षिताः P, N, K, M.

G and M add in the end of the description of *śānta*:
 एवं नव रसा दृष्टा नाट्यज्ञैर्लक्षणान्विताः

Now Abhinava says that there are only nine *rasas*. Just after the explanation of *utpādyotpādakaparakāra* of *rasas* he says:

“एतावन्त एव च रसा इत्युक्तं पूर्वम्” (A. p. 701).

Here it means that there are only eight *rasas* because in that context only four *rasas* (*śṛṅgāra*, *raudra*, *vīra* and *bībhatsa*) are *utpādyas*. There Abhinava's suggestion is that there is no question of *śāntarasa*. That Abhinava throws utter confusion before the readers of the *Nāṭyaśāstra* is undoubtedly visible in the problem of *śāntarasa*. Similar is the case with the text of the *Nāṭyaśāstra* also. From the foregoing analytical examination, an unprejudiced critic may be forced to conclude that it is A that had influenced many scribes of later periods and modern editors in determining correct readings and that at the same time on several occasions that influence had produced not so admirable results.

I.W. MABBETT

HINDUISM IN INDOCHINA BEFORE THE RISE OF ANGKOR

The countries of the eastern part of the mainland of South-East Asia (Vietnam, Cambodia, Laos and Thailand) have for many centuries, at least until very recent times, been staunchly Buddhist in their orientation, as has Burma in the west. In the earlier phases of Indian cultural influence in the area, however, Hinduism and Buddhism were parts of a single parcel of Indian tradition, and wherever that tradition spread, both faiths were to be found. To some extent though, for reasons that are not clear, Hinduism was generally stronger in the east than in the west. One must be careful with such generalizations - for one thing, it must be understood that they apply only to the levels of religious life attested by inscriptions and archaeological remains, omitting any judgement about the religious life of ordinary people in the villages, who were historically mute; for another, it must be admitted that the religious culture of the early Mon communities remains rather shadowy, so that our notions about the ancient cultures of much of the area that later became Burma may be subject to considerable revision.

It does seem, though, that Hinduism - represented by general brahmanical culture and ritual, by the cult of

Viṣṇu and its variants, and perhaps most especially by the cult of Śiva - outstripped Buddhism in its appeal in the earliest states around the coast of Indochina where the trading route ran. Royal sponsorship of *liṅga* cults is conspicuous in Champa, for example, and in the Cambodian kingdoms. An examination of the religious statuary listed and described by J. Boisselier in *La Statuaire du Champa*, for example, shows that only a small minority of the images are Buddhist.¹ The inscriptions of the successive states in the area of Cambodia show a very pronounced bias towards Hinduism, and of course, during the heyday of the empire of Angkor, the great majority of the foundations endowed by rulers and court dignitaries benefited the votaries of Śiva and Viṣṇu and the whole pantheon of divinities associated with them. In the west it was different; Hīnayāna and Mahāyāna, Sanskrit Buddhism and Pali, were predominantly attested from early times in the iconography and epigraphy of the 'Indianized' states, particularly that of the Pyu at Śrīkṣetra.

Why should this be? One line of enquiry might attempt to trace the fortunes of religious cults in their South-East Asian homes to their relative strength in the particular parts of India from which the cultural impulses came that influenced each community. Such an enquiry, however, requires perhaps rather more detailed knowledge of particular times and places than the evidence permits at present. It is not so long since scholars were debating the claims of northern and southern India to provide the chief impetus for 'Indianization'; both, it is clear, played a part at different times, but specific linkages are few and far between. Influence seem to have been cosmopolitan. Champa, in the southern part of what was to become Vietnam, was named after a northern state, but some of its cults have been seen as stemming from the far south. We are far from possessing the materials for a historical map of cultural influence.

Another approach would be to seek evidence of any *rapport* there may have been between Hinduism or Buddhism and each host society. Such an argument would be tenuous, but there is something to be said for it. The wealthy centres of relatively dense population, thriving on a combination of trade and increasingly productive agriculture, were, in the earlier period which we are here considering (2nd-8th centuries A.D.) mainly in the east. Such societies, it might be considered, produced relatively centralised regimes with flourishing royal courts; the richest endowments would go to support the cults of a socially oriented religion with its sacrifices and community rituals. True, Buddhism was to adapt itself to this role, as we see in its sponsorship by many kings; yet perhaps Buddhism's primary orientation was to coenobitism, and it thrived best in the smaller outlying communities where population was originally sparser, and where people turned naturally to the values of a universal doctrine rather than to the cultural particularism of a metropolitan society. When flourishing metropolitan centres such as Pagan appeared in later centuries, Buddhism was well established and adapted itself increasingly to the role of state orthodoxy that Hinduism had long been playing in the east.

Such a thesis is too speculative to establish with any rigour, but it may be useful here to offer a survey of the forms taken by Hinduism in the Indochinese states. It will be useful to bear the thesis in mind, however; what we shall observe is that, in each state where Hinduism dominated, (a) it had an important role in *legitimizing* a metropolitan regime; (b) it provided the ideological framework for an elaborate network of well-endowed foundations which served as 'centres of employment and economic distribution and exchange'; and (c) it furnished a repertoire of 'public ritual' which served to endorse the solidarity of the community.

CHAMPA

Let us take Champa first. This state, or series of linked principalities, witnessed in particular the adoption of *liṅga* cults as part of the regalia of royal legitimacy.

Champa is first attested in the historical record by Chinese sources which refer to it as *Lin-i*; over the centuries, several other names were applied as successive capital cities became centres of royal ambition. By the late fourth century, the royal capital at Mi-Son possessed a royal cult of Siva in the form of Śiva Bhadrēśvara, a name which combined the ruler, Bhadravarman, with the patron deity Siva (*īśvara* being a name of Śiva).² Subsequently, a later ruler, Sambhuvarman, rededicated the cult with a Śiva *liṅga* combining his own name with his ancestor's and the god's, as Śambhubhadrēśvara.³

It is clear that Siva was important to the Cham state. In 774 A.D. it is recorded that piratical and savage raiders from the south, possibly from Java, ravaged the Cham coast, burned the royal temple, and stole the precious *liṅga*. In 787 raiders came again from Java; they pillaged and desecrated the Bhadradhipatisvara temple west of the capital Virapura, near Phanrang.⁴ These episodes attest the importance of saivite cult icons as symbols of national identity.

In the thirteenth and fourteenth centuries royal *liṅga* cults were still actively patronised. King Jayasimhavarman III (who reigned in the last years of the thirteenth century and the first years of the fourteenth) established a *Śiva-liṅga* called Jayasimhavamaliṅgesvara at the shrine of Po Klaung Garai.⁵ The central tower had a fine *liṅga* with a face sculpted on it (a *mukhaliṅga*): the neck and head emerged from the *liṅga*, and the face was moustached and bearded. Another *mukhaliṅga* has a carefully finished face but the *liṅga* is rough.⁶

This sort of cult has been seen as representing, in a more sophisticated Hindu form, a type of religion that persisted from prehistoric times, whereby the community chief, acting as priest, would become identical with the patron deity. In an important article published in 1932,⁷ P. Mus argued that, for the Chams (and such others as adopted it), the imported Śiva cult was domesticated as an essentially local tradition entirely continuous with their ancient cults of rough stone icons which had social, cadastral and magic functions in defining the community and its land and assuring its prosperity.

It follows from this sort of analysis that the ruler, as descendant of the tribal chieftain whose religio-magic role Mus reconstructs from prehistoric times, is the vehicle of the local divinity whose sacred energy is made accessible to the community by his intervention. The essence of the *liṅga*, then, is at once the inner nature of the god, Śiva who stands as protector of the community, and at the same time the human being, the ruler acting as priest, through whom the sacred energy flows to make itself manifest.

Mus' analysis of the significance of the Śiva cults adopted in Indochina thus identifies them as essentially continuations in an Indian-supplied form of indigenous cults of particular communities. It has been contested by J. Filliozat, who draws attention to the results of research into the nature of the Śiva cult in southern India, at the source of the Indochinese importation.⁸ He stresses that in India, Śiva was embodied in multiple *liṅga* cults possessed by particular communities, but was in all of these well understood to be the (locally incarnate) one and only universal Śiva.

But he (Mus) did not know that Śiva, the sovereign being, is the lord of each locality, worshipped and hymned as such to the exclusion of the *bhūta* of the same locality, for it is the miracle of divine grace to be fully materialized in each place and for each person, even while pervading

the whole universe. He is the opposite of a glorified god of the earth.⁹

Thus, he considers, lacking the Indian perspective, Mus was wrong in seeing the Cham *liṅgas* as effectively multiple local gods, for the Chams were sophisticated adepts in Indian lore and recognized perfectly well the meaning of what they took from India. This much is no doubt the case, but it may perhaps be argued that Mus' underlying argument, which bore on the meaning of the cult within the mentality of local culture, still stands: the theology (so to speak) of Śiva could be learned and used as a part of the 'Great Tradition' of high culture, but what gave the *liṅga* cult its appeal and its sacred energy was precisely its continuity with ancient local cults of earth gods; that at least is the case that Mus would no doubt put, and the evidence for it is not so much the historical record of Champa as the numerous parallels throughout monsoon Asia attesting the vitality of chthonic cults.¹⁰

Thus Śiva, worshipped through the *liṅga* cult, was generally the chief patron of rulers and nobles in Indochina. A further illustration of the importance of this cult is furnished by the various historical references to Liṅgaparvata, known from Chinese references to Ling-ch'ieh po-pa-to as a mountain crowned by a temple on an island opposite Champa. It was said that each year the king would offer human sacrifice there.¹¹ This represents the special attention paid in the region to the sanctity of mountain sites, the cult of the local spirit who must be approached by the community chief by means of sacrifice, and the adoption for the purposes of essentially indigenous cult practices of the forms of Indian religion.

It is perhaps this adaptability of the *liṅga* to the needs of community cult life that gave Śiva his importance. Vaiṣṇavism, by contrast, was much less conspicuous in Champa than in some other early kingdoms of South-East Asia. One exception in the earlier period was the reign

of Vikrāntavarman, who came to the throne in 653 A.D. He was responsible for a great deal of religious construction, and some of his buildings evidence the presence of Vaiṣṇavism in Champa.¹²

Much later, a temporary restoration of Cham independent power took place under Che Bong-Nga late in the fourteenth century. A Cham ruler in 1421 scored a victory over the now weakened Khmer kingdom and celebrated by the inscription of Viṣṇu of Bien-Hoa.¹³

In Champa, the dominant strain in Hindu-Buddhist culture that was sponsored at the courts of the kings was Hindu, chiefly the Śiva cult. But, as elsewhere, it is necessary to recognize the operation of the syncretic impulse which fused imported texts, myths and rituals with indigenous cults. The religious practices and beliefs that are characteristic of folk culture throughout monsoon Asia persisted, in the ways suggested by Mus, not simply alongside but in the very forms of Hindu and Buddhist cults that were part of the state religion. Local myths and deities were fused with those of Indian origin, so that, when Vietnamese encroachment was complete and the high culture of the Chams was lost, the vestiges of former Hindu cults were identified with cults of indigenous origin.

A trace of indigenous religious belief of another type can perhaps be recognized in dynastic myths. There is a widespread dynastic foundation myth according to which in variants found throughout South-East Asia a line of rulers is founded by the union of two mythical families; it is found in a Cham version, surfacing from the reign of Harivarman IV (acc. 1074) who was said to be descended from the clan of the coconut palm (*nārikela*) on his father's side and that of the areca palm (*kramuka*) on his mother's. This sort of clan mythology is paralleled in other areas, notably among the Vietnamese, and has been thought to represent a vestige of indigenous totemism.¹⁴

The persistence of local beliefs under the mantle of 'Great Tradition' cults, in the Hindu and Buddhist forms patronised by the courts, is also illustrated in Champa as elsewhere by the popularity of the *nāga* or serpent spirit. Although the term *nāga* is Indian, the type of serpent spirit which it designates is not of Aryan origin; it is, rather, part of the web of local cults that in prehistoric times lay across the whole of monsoon Asia, South-East Asia as well as India, and the occurrence of *nāga* spirits in the ancient kingdoms, attested in Champa for example by epigraphy,¹⁵ conceals under an Indian name a sort of religious practice that owed nothing to India in its inspiration.

In the middle of the eighth century, the capital of the Chams moved south, first to Phanrang, then to Kauthara (Nha Trang), where the regime known to the Chinese as Huan Wang was established. The kings of this southern dynasty took posthumous names indicating Hindu affiliation: the first, Pr̥thivīndravarman, was known after his death as Rudraloka (= *rudralokagata* 'gone to the world of Rudra')¹⁶.

Nha Trang was a centre of the cult of Po Nagar, 'Lady of the Kingdom', from the eighth to the thirteenth century; in the tenth, the principal shrine was replaced by a Bhagavata image.¹⁷ This happened in 918, when the ruler, Indravarman III, consecrated a golden statue of Bhagavati. However, it was stolen in around 950 by Khmers. In 965 Jaya Indravarman restored the sanctuary. The Bhagavati cult is addressed to the *śakti* (divine energy, personalised as a goddess) of Śiva, and the Cham Bhagavati cult of Po Nagar, with its associated art, has been seen as betraying links with south India (Mahabalipuram) and Ceylon.

In the last part of the ninth century and the early part of the tenth, Buddhism was actively patronised by rulers at Dong-Duong, and an important era of Buddhist culture came to vary the Hindu domination. The Buddhist

rulers, like the Hindu (and indeed it is misleading to segregate them as if the two faiths were separate and exclusive allegiances), regularly patronised religious cults as part of the apparatus of legitimacy, a practice which continued after the Dong-Duong period.

In 988 Harivarman II was reigning at Vijayapura; in 991 he established the shrine of Īśānabhadreśvara (recalling the much earlier Bhadreśvara and Sambhubhadreśvara) at Mi-Son.¹⁸ In the eleventh century, after a period in Indrapura, the Cham rulers were forced south to Vijayapura (Binh-Dinh province).

This was a consequence of the Vietnamese encroachment, which ultimately was to decree the doom of the Cham kingdom. In the tenth century the Vietnamese had grasped their independence from the Chinese empire and in the eleventh they imposed a series of defeats on the Chams to the south of them (who had long been in the habit of raiding northward into the border territory).

Increasingly, the Chams were to be driven southwards before the advance of the Vietnamese. In 1050 the Cham crown prince commemorated a victory over rebels in the south, in Pāṇḍuraṅga, by erecting a *liṅga* column on the hill of Po Klaung Garai, and the king restored the Po Nagar shrine at Nha Trang.¹⁹

In the 1150s, Jaya Harivarman I reconsolidated the kingdom and founded many royal religious establishments at Mi-Son and Po-Nagar.

The continued importance of the Linga cult as symbol of national identity is attested in the thirteenth century by the work of King Jaya Parameśvaravarman (II), who restored ruins and re-established *liṅgas* in the south. His brother, who became king, Jaya Indravarman (VI), was described as 'versed in the philosophy of the various schools'.²⁰

Early in the fourteenth Century, the established brahmanical religion was supported by Jaya Simhavarman III, who built temples at Po Klaung Garai and Yang Prong.²¹

A little later, during the reign of a Vietnamese-installed ruler, Che A-nan, an early European account enters the historical record from the pen of the Franciscan Odoric of Pordenone, who described Champa briefly and intriguingly. He refers to what appears to be the Hindu custom of widow suicide: "When a man dies in this country, they bury his wife with him, for they say that she should live with him in the other life also."²² However, it is not only the Hindu custom of becoming *sati* that offers itself as the origin of this phenomenon. Similar customs, or at least belief systems that maintain the ideal of such behaviour, have been observed among various tribal groups in Indochina in more recent times, for example among the Orang Glai.²³ Usually the theory is that the survivor owes it to her husband's family to make amends, and is liable to die if she does not do so.

The social customs associated with the Hindu caste system can therefore no more confidently be ascribed to the Chams than any other South-East Asian people who adopted Indian culture. But, like the Cambodians and others, the Chams may have borrowed some of the nomenclature of caste; among their ritual groups, the first in order of precedence was the *basheh* (perhaps equivalent to 'brahman'), members of which obtained the status by patrilineal descent.²⁴

We should beware, though, of making too much of apparent evidence of caste institutions, for the caste system is highly integrated and not readily transplanted elsewhere piecemeal. In South-East Asia, Indian influence was in many ways considerable, but the ancient states such as Champa were not colonised, and their participation in the Hindu-Buddhist civilization was cultural, not social. One of the most important themes in the early history of the region is its autonomy, as the work of many scholars has emphasized.

We need to bear this theme in mind as we turn to look at the fortunes of Hinduism in Champa's neighbour states, the Khmer principalities known to history primarily by the names given them in Chinese sources on account of the absence of reliable indigenous information.

‘FUNAN’

It is impossible to avoid altogether the terms and categories used by the Chinese in referring to the Indochinese states; but it is now generally recognized that these terms and categories are likely to be gravely misleading. One of the most misleading may be the name ‘Funan’, used to describe a kingdom or empire with its centre in Cambodia and southern Vietnam; it is likely that ‘Funan’ was neither as unified nor as discontinuous with the kingdoms that succeeded it as the Chinese sources represent. Hence the archaeological evidence of religious culture in Indochina and the references to the religious traditions of ‘Fu-nan’ and its neighbours in Chinese literature cannot confidently be combined. It has even been questioned whether Hinduism or Buddhism really put down roots in Indochina during the earlier centuries of ‘Fu-nan.’²⁵

In the earliest centuries, there is indeed evidence of Buddhism from the coastal areas of Indochina frequented by traders and pilgrims; but the Indochinese states which developed in Indochina came to be more influenced by brahmanism, at least at the level of court culture, and the Chinese accounts of the region, to whatever extent they are reliable sources, vouch for the presence of substantial numbers of brahmans at the courts of the various principalities in the area of ‘Funan’ around the coast of the Gulf of Siam.²⁶

This brahmanical influence upon state formation is enshrined, among other things, in legitimization myths. A legend of obscure origin, but common to a number of kingdoms, is recorded by the account of the embassy of K’ang T’ai to ‘Fu-nan’ in the third century A.D. From it

we learn that the rulers of this kingdom traced their legitimacy to the founding of the state by a brahman, Kauṇḍinya (represented in Chinese as 'Hun-t'ien'). He travelled by sea to the shores of the country and was attacked by the queen's forces; he shot her with a magic bow and receiving her submission, married her and ruled over the kingdom. This myth is significant not as a historical record but as evidence of the type of religious context: we may interpret the brahman, bringer of Hinduism, as standing for the unifying culture derived from India which helped to give expression to national identity, and the queen as standing for the local cults of water and snake spirits (in some versions of the myth, the queen is a *nāgī*, a snake spirit inhabiting the subterranean waters). At all events it proved potent enough to survive in Indochina; later inscriptions in Champa and Cambodia refer to the union of Soma with Kauṇḍinya as the origin of a royal race.²⁷

V. Goloubew suggested a Scythian origin for the myth, mediate through the Pallavas in India.²⁸ Coedes treats it as a local form of a dynastic origin myth found in several places including the Indian Pallava kingdom.²⁹ E. Poree-Maspero concluded from a study of the Chinese texts that in fact Kauṇḍinya represented not brahmanism but local ancestral cults and originated from central Asia rather than India: some features of the legend (the use of a bow; the style of garment bestowed by Kauṇḍinya upon the queen) suggested central Asia, not India; and the processes of cultural contact at the root of the legend involved a transmission from central Asia through southern China.³⁰ This in turn raises the problem of connections between Persia and central Asia, India, and Indochina. There is some evidence of indirect cultural influence from as far west as Persia; it consists of *Sūrya* images wearing tunics of distinctly central Asian rather than Indian style, of which a few were found in Cochin China, and the epigraphical references to *Śākabrāhmaṇa*, which Bhattacharya considered could represent Viṣṇu in the form of the sun god *Sūrya*.³¹

The persian solar cult is generally considered to have had a strong influence on Buddhism during the crystallization of Mahāyāna³² and the sun god converged particularly with the myth and iconography of Viṣṇu. Representations of apparently Scythian figures are to be seen in India, at Ajanta and Amarāvati, and the Scythian presence in 'Funan' may have been significant. (Malleret supposed that the so-called 'second Kaunḍinya' coming as ruler to 'Funan' may have marked the revival of Indian tradition after a Scythian interlude, but this sort of conjecture rests upon fragile evidence.³³) A. Christie points to the Sūrya cult and the use of the Śaka era as evidences of the west Indian and Śaka influence.³⁴

However that may be, in the course of the sixth century the state known to the Chinese as 'Funan' disappeared and was replaced by a successor, 'Chenla', where Hinduism was actively promoted by many rulers.

'CHENLA'

In dealing with the Indochinese states, it is important to remember that the Chinese knew of them only indirectly and were prone to simplify the versions of their political history that passed into the official record. Thus, it is generally agreed among scholars that the terms 'Funan' and 'Chenla' probably give a misleading picture of the politics of the region, implying that there was at any time a single unified state (on the model of the Chinese concept of a kingdom, *kuo*). It appears likely that, on the contrary, there were various competing principalities, each dominating one main centre of population, and the lines of Khmer political history are only now beginning to be disentangled.

It is clear though that, in most of the principalities that made up 'Chenla', which lasted through the seventh and most of the eighth centuries, brahmanism, with its cults of Śiva and Viṣṇu, was strong. Various sects and cults are attested: the Pāśupatas in the seventh century,

and the (Vaiṣṇavite) Pāñcarātras, and also the combined Śiva-Viṣṇu cult of Harihara³⁵.

Let us take the Śaivite sects first. Some scholars have stressed the role of Śiva as a god of grace for his devotees, a mystical object of devotion transcending the barriers of caste and race, well fitted to become the patron of charismatic Indochinese leaders; ³⁶ Wolters argues that the epigraphy of the seventh century reveals an association of the devotional Śiva cult, not with a belief in the efficacy of brahmanical rituals, but with a view of the ruler as the vehicle of a special personal spiritual quality, a sort of prowess or *māna* which has analogues with Chinese and montagnard tribal religion rather than with the rituals of Hinduism. Thus, though the Khmers saw themselves as an integral part of the Indian cultural ecumen, they maintained an essentially indigenous politico-religious culture. It can be noted here that, just as Filliozat's critique of Mus' interpretation of the *liṅga* cult may be right theologically speaking but fail to meet Mus' real point about the meaning of the cult on the ground, so to speak, even so the Khmer Śiva cult can be seen in the same way: it embodied a sophisticated form of Indian religion that was fully understood, but also gave form to local beliefs about the spiritual energies inherent in great men.

An inscription of 624 offers a fragment of Śaivite theology: Śiva is a personal god of grace and is equivalent to the absolute Brahman.³⁷ This sort of monistic theism characterises the devotional movements that came to be associated with Śiva. K. Bhattacharya interprets the inscription as a significant illustration of the doctrine that represented Śiva both as a personal god and as the impersonal Brahman or absolute.³⁸ K.A.N.Sastri interprets it as representing the Pāsūpata doctrine of union with God, noting particularly its reference to Yoga;³⁹ but his identification is contested by K. Bhattacharya.⁴⁰

An inscription from Sambor dated 627 A.D. refers to a Pāśupata brahman who is said to be expert in Śabda (grammar), Vaiśeṣika, Nyāya, Sāṃkhya and Buddhism.⁴¹

The worship of Śiva is evidenced in the *liṅga* cult. King Mahendravarman established *liṅgas*, each entitled *girīśa* (lord of the mountain) on hilltops to commemorate victories. *Liṅgas* have Indian names, one *puṣkarekṣa*, represents a foundation by King Puṣkara in 716 at Prah Theat and thus illustrates the combination of the name of the patron god with that of the founder that is found also in Champa and, in the case of numerous statues, in Angkor.⁴² Also related to Śiva are the cults of Umā in her demon-slaying form (Mahiṣāsūramardīnī)⁴³ and the elephant god Gaṇeśa, both popular in Cambodia - indeed, K. Bhattacharya argues that there was a regular cult of Gaṇeśa.⁴⁴

Also related to Śiva worship are the cults, attested in Cambodia, of Kumāra, Skanda, Nandin (Śiva's bull mount), and Durgā.⁴⁵ From 713 A.D. dates an inscription of a queen Jayadevī, recording donations to a śaivite shrine founded by a princess who was married to a brahman from India.⁴⁶ Important for the history of religious ideas of kingship is an inscription of Jayavarman I which refers to the king as a part (*aṃśa*) of Śiva, an early embodiment of the conception of divine kingship (if this is how it should be interpreted) and a close analogy with the claim made by the Angkorian king Jayavarman IV.⁴⁷

The cult of Viṣṇu was well established in its own right, as evidenced by a reference to the endowment of a Viṣṇu image called Cakratīrthasvāmin.⁴⁸ An inscription of Jayavarman I refers to a Pāñcarātra priest (one of the earliest allusions to this sect).⁴⁹ Verse 3 of this inscription names the god of the foundation as Trailokyasāra; verse 4 refers to the sacrificial priest as versed in the five moments (*pāñcakāla*), the five elements (*pāñcabhautika*), and as *pāñcarātrārcācuñcuna*.⁵⁰ K. Bhattacharya points to the

derivation of the Pāñcarātras in Cambodia from the transformation of the Bhāgavatas or Sāttvatas into a Vaiṣṇavite sect in India during the Gupta period.⁵¹

Other names or incarnations of Viṣṇu are found in the epigraphy, notably the title Trailokyasāra, and his consort Lakṣmī, goddess of fortune.⁵² Possibly one of the earliest statue portraits is that called Hari Viśvareśa, a statue of Viṣṇu in the form of Hari Viśvarūpa, thought to be perhaps an image of the donor.⁵³ Bhattacharya suggests that the various references to the cult of Śakabrāhmaṇa may represent Viṣṇu in the form of the sun god Sūrya.⁵⁴ A seventh-century inscription refers to the institution by Somaśarman of daily readings from the *Rāmāyaṇa*, the (*Mahā*)-*bhārata*, and the *purāṇa* for the benefit of the cult of the god Śrī Tribhuvaneśvara.⁵⁵

Now, such evidences as these all go to show the close association in Indochina between the institutions of Hinduism and the legitimacy and authority of the ruler. It is just this association, indeed, which moved L. Dumont, in *Homo Hierarchicus*, to assert that there was an important difference between the roles of religion in India and in Indochina - in the former, Hinduism kept its independence from political power and was able to determine the concepts and categories which controlled social behaviour, whereas in the latter the position of the ruler was paramount and religious institutions were bound up with political ones.⁵⁶ This dichotomy can be questioned; the contrast between India and Indochina may not be as sharp as Dumont presents it, for certainly the Khmer and Cham rulers needed the brahmins, just as the brahmins needed them.

However, there is no space here to pursue this question further. What can be clearly enough observed on the evidence of Hindu influence reviewed above is that, whatever the relation between religion and politics in general, Hinduism provided the vocabulary in which the people of the Indochinese kingdoms expressed their view

of the forces that controlled their fortunes and gave success or failure to the enterprises of their rulers. The cults of the great gods gave orthodoxy; proper observance of their demands gave legitimacy; and the public worship of them confirmed the solidarity of the communities that were their devotees.

KALPANA UPRETI

AVADĀNA-ŚĀTAKA ON THE TRADE AND COMMERCE IN ANCIENT INDIA

All the scholars who have worked on the evolving pattern of ancient Indian economy are unanimous that the centuries immediately preceeding and succeeding the Christian era, to which the *Avadāna-śataka*¹ belongs witnessed an unprecedented growth of trade and commerce. D.D. Kosambi while dealing with the post-Mauryan and pre-Gupta phase of Indian society devotes one full section to commodity producers and trade². *The Early Indian Economics* of G.L. Adhya deals exclusively with the economic pattern of this period with special emphasis on trade and commerce. R.S. Sharma, while dealing with different stages in ancient Indian economy succinctly remarks that from the economic point of view the most important development of the period was the thriving trade between the southern India and the Roman empire.³ Some of the specific characteristics of the Sātavāhana rule have been explained by him in the light of the enormous trade with the mediterranean region and the influx of Roman coins coupled with the rise of urban settlements in the Deccan on a large scale.⁴ Romila Thapar calls the phase from 200 B.C. to 300 A.D. as the rise of the merchantile community on the assumption that beneath

apparent political confusion marked by rise and decline of many dynasties, there was one factor which gave continuity and consistency to this period, and that was trade.⁵

It is rather strange, if not outrightly astonishing, that these scholars have utilised the evidence from almost all the available sources, archaeological, epigraphic, numismatic, indigenous literature and the classical account except the *Avadānas*. Even the data provided by the *Jātakas* have been preferred to those of the *Avadānas*. It is really difficult to understand why the *Avadānas* have been so undermined as the sources of ancient Indian trade and commerce between circa 200 B.C. and 200 A.D. We are firmly of the opinion that the data provided by the *Avadānas* in this respect is much more detailed and reliable. The following tentative reconstruction of ancient Indian trade and commerce during a few centuries preceding and following the Christian era on the basis of the *Avadāna-śataka* will substantiate our contention to a large extent.

The traders and merchants have been variously called as *vaṇija*,⁶ *sārthavāha*,⁷ and *śreṣṭhi*.⁸ The references to the *vaṇijas* can be traced all over the texts and they indicate that the term was used in a generic sense covering all the categories of traders. The *sārthavāhas* seem to be large scale traders who were usually engaged in maritime trade. A stock expression in the text represents them as leaders of the *vaṇijas* (*sārthavāha iva vaṇiggāṇa parivṛtaḥ*).⁹ The most outstanding members of the *sārthavāha* community were known as *mahāsārthavāhas*.¹⁰ Another stock expression in the text associates the *śreṣṭhis* with the urban people (*śreṣṭhīva pauragāṇa-parivṛtaḥ*).¹¹ As has been pointed out by many scholars, the *śreṣṭhis* emerged as bankers and traders on the economic scene of India in sixth century B.C. and maintained a distinct position for centuries to come. At the turning of the Christian era they seem to have achieved an eminent position in the urban society. Besides these

big traders and merchants, there were also petty traders and shopkeepers who were called *aukkarikas*¹² and *āpaṇikas*¹³ respectively.

The general terms used for commodities are *paṇya*¹⁴ and *bhāṇḍa*.¹⁵ The smaller traders and shopkeepers dealt in articles like *perfumes*,¹⁶ *jewellery*¹⁷ and other necessary things of urban life. The internal trade by land route, was carried out by such modes of transportation as bullock-carts, coolies, camels, bullocks and asses.¹⁸ These traders usually travelled in caravans. However the number five-hundred mentioned so often is merely conventional as we see in the early Pāli texts also. The riverine routes were plied by boats (*nau*).¹⁹ The land routes were infested by robbers (*tasmimś ca pradeśe mahat taskarabhayaṃ*).²⁰ Besides, the danger of missing the track and being stranded in deep forests and deserts posed a real problem:

*kāntāramārgapratipannāni te mārgāt
paribhṛṣṭa vālukā sthalaṃ anuprāptaḥ
te madhyāhnaśamaye tīkṣṇakararaśmi-
santāpitajalodhṛta iva matsyaḥ vedānāṃ
vedayamānaḥ.*²¹

Consequently the traders might have preferred riverine routes to the land routes. The river Ganges, with its smooth surface and long course touching many parts of northern India, might have provided a safer and cheaper highway of communication (*gaṅgāyām....*).²² However, the riverine routes were not available to reach all the parts of the country and therefore the traders had no option but to take to land routes. Our text refers to many routes, e.g. Dakṣiṇā-patha to Kośala,²³ Dakṣiṇāpatha to Rājagṛha,²⁴ Śrāvastī to Surpāraka²⁵ and Gāndhāra to Pāṭaliputra.²⁶ The former three routes started in middle Gangetic valley and passed through the Deccan which witnessed an unprecedented growth of urbanisation and trade during this period and finally terminated on the western sea-coast. The last one was the famous Uttara-patha which started

from the middle Gangetic Valley and passed through many important towns and trade marts and finally terminated at Taxila. From sea-ports like Surpāraka and Bhārukaccha on the western coast and Taxila in the north-west, the trade was either taken over by foreign intermediaries or carried forward to the foreign lands by Indian traders themselves.²⁷ During their long journies, the traders had to pass through many villages (*grāma*), towns (*nagara*), trade centres (*nigama*), countries (*jana-pada*), kingdom (*rāstra*), capital cities (*rājadhāni*) and cities (*paṭṭaṇa*).²⁸ At these places, they might be transacting their business with the local people. Some part of these transactions was carried by barter and some part by monetary dealings, although the commodities so exchanged or sold have not been mentioned as such.

The *Avadāna-śataka* mentions many coins, namely *kārṣāpaṇa*,²⁹ *purāṇa*,³⁰ *niṣka*,³¹ *hiranya-suvarṇa*³² and *dīnāra*.³³ *Kārṣāpaṇa*, for the first time finds place in early Pāli literature³⁴ and in the *Aṣṭādhyāyī* of Pāṇini.³⁵ It was made of gold, silver and copper and the standard of weight was different in different metals. According to Monier Williams the weight of gold *kārṣāpaṇa* was 16 *māṣas*, of silver 16 *paṇas* and of copper 80 *rattikas*.³⁶ The *purāṇa* was a silver coin weighing 16 *paṇas*,³⁷ the *niṣka* has been mentioned in the earliest literary compositions of the Aryans. Some scholars are of the opinion that in the *Ṛgveda*, the term has been used in the sense of gold coins. But others have refuted this opinion and put forward an alternative view that the term has been used in the sense of small pieces of gold used for making necklaces.³⁸ However, in course of time *niṣka* became transformed into a gold coin of definite weight. *Hiranya-suvarṇa* also seems to be a coin of gold. *Dīnāra* is considered to be a *kuṣāṇa* adaptation of the contemporary Roman Golden coin *Dinarius*. This coin was introduced by Wema-Kadphesis, the son and successor of the founder of the dynasty of Kujula Kadphesis. The evidence from literary sources is so confusing and

conflicting that it is very difficult to draw an accurate chart of the standard weight and value of coins in different metals. In our text the *kārṣāpaṇa* is mentioned few times. In one instance in which a covetous sea-merchant tries to riggle out of his earlier vow to liberally spend for the worship of the Lord Buddha by offering incense for a pittance of two *kārṣāpaṇas*,³⁹ the term is definitely used for a coin of base metal. In another instance, the term however, seems to be used in the sense of 'money' in general.⁴⁰ *Hiraṇya* and *suvarṇa* are mentioned very often and are definitely gold coins of very high value which are used for large scale transactions only. The circulation of the gold, silver, copper, bronze, potin and even lead coins is attested by archaeological evidence. The gold, copper and bronze coins of the Kuṣāṇa rulers have been found in different parts of northern India.⁴¹ The silver coinage of Nahapana which were later restricted by the Sātavāhana ruler Gautamīputra Sātakarṇi have been discovered at Jogalthambi in Maharashtra. He also issued copper coins.⁴² The Kardamaka-sakas issued coins both in precious and base metals. The Sātavāhanas issued silver, copper, bronze, lead and potin coins. However they did not issue any gold coinage. It has been suggested by many scholars that the gold coins imported from Rome and found extensively at various sites in the Deccan were used for big transactions. This extensive numismatic evidence covering the period from circa first century B.C. to first century A.D., to which our text also belongs, witnessed an unprecedented money economy, not only in large scale transaction but also in the life of the common people.

The text refers to the towns and cities like Kauravya, Nagara,⁴³ Vārāṇasī-mahānagarī,⁴⁴ Pāṭaliputra-nagara,⁴⁵ Kajaṅgala-nagara,⁴⁶ Rājagṛha,⁴⁷ Śrāvastī,⁴⁸ Saupāraka,⁴⁹ Saṅkāśya,⁵⁰ and Kapilavastu.⁵¹ Kaurava-nagara as the name suggests, might have been situated in the region of Kuru which comprised modern Haryana, Delhi and the Upper Gangetic Doab.⁵² This town has not at all been mentioned

in the Pāli canonical literature. Vārāṇasī, Śrāvastī, Śāṅkāsya and Kapilavastu are in present day Uttara Pradesh. Pāṭaliputra, Rājagṛha and Kāśyāpāṭa are in modern Bihar. Saupāraka is in modern Thana district of Bombay and one of the most important sea-ports on the western coast of the Indian subcontinent. Among the geographical zones and the states, our text mentions Dakṣiṇā-patha (Deccan)⁵³ and Dakṣiṇā-giri⁵⁴ (which has been identified as Deccan(?) by Speyer,⁵⁵ Madhya-deśa (the middle Gangetic valley), Gāndhāra (certain parts of north-western India), Pāñcāla (the districts of Bareilly, Badaun and Farrukabad in Uttara-pradesh), Videha (Tirhut in Bihar), Kosala (present day Oudh), Kāśī (the region round about Vārāṇasī), Malla (Gorakhpur district of Uttara Pradesh) and Magadha. These names of the cities, geographical regions and states give us an idea of the scope of functioning of Indian traders within the subcontinent. However one should always keep in mind that many of the states mentioned in the text actually refer to the time of the Buddha and by the time our text was written, they ceased to exist. The same can be said about certain cities and the towns mentioned in the text. Among the rivers, Ajirāvati, Cārikā, Vālukā and Gaṅgā have been mentioned. The first was near Śrāvastī and the remaining three near Vārāṇasī. In the *Nāvikaavadāna*,⁵⁶ we are told that on the bank of the river Ajirāvati, there was a village of boatmen, the residents of which were engaged in ferry services. The river Ganges was used as a highway of communication and trade by big merchants.⁵⁷

The hoarding of money was resorted to by some rich traders and merchants. However, such a practice does not seem to be wide spread and in general the traders and merchants preferred to invest their money with a view to further augment their wealth (*vaṇig iva labdhalābhaḥ*,⁵⁸ *yāvad ahaṃ... dhanasañcayam karomi*⁵⁹). It is not without significance that a rich *gṛhapati* of Rājagṛha mentioned in the *Kṛṣṇasarpāvadāna* who indulges in hoarding

wealth has been depicted as a contemptible, greedy and miserly being who lived like a vulture in his lifetime and became a poisonous snake after his death.⁶⁰

Although the period witnessed an alround growth in economy, the developments which took place in the realm of maritime trade were truly amazing. The developments in agriculture, arts and crafts and internal trade made the economy quite viable. As a result of this, the volume of foreign trade increased substantially. This foreign trade was largely carried out by maritime routes as is amply proved by the Periplus of the Erythrean Sea, the Geography of Ptolemy, the Natural History of Plinny, the archaeological findings in different parts of India and the *Avadāna* and *Jātaka* literature. This maritime trade was carried with both the western world and the countries of south-east Asia. The discovery of monsoon winds by a Greek mariner Hippalus in 46 A.D. was a breakthrough in sea-trade inasmuch as it enabled the mariners to undertake mid-sea journeys rather than the slow moving coastal navigation. This changing situation is reflected in the *Avadāna-śataka* to a large extent. The text calls *samudra* (sea) also as *makarālaya* (the abode of large marine creatures),⁶¹ and *lavaṇajala* (the saline water).⁶²

Our text suggests that individual initiative and enterprise played as much important role as the organisation and planning in the growth and development of maritime trade during this period. Many traders, impelled by the desire to further augment their wealth decided to go to the sea. Some of them undertook such journeys more than once. Kusīda, the son of a *śreṣṭhī* of *Śrāvastī* undertook sea-voyages six times⁶³ Another *sārthavāha* mentioned in the *Sārthavāhavadāna* is stated to have visited the sea at least thrice. Kusīda, the hero of the *Kusīdāvadāna*, is said to have declared himself a *sārthavāha* by publicly announcing his decision to undertake a sea-voyage. The

intention of this public announcement was clearly to associate other traders with him. In fact the very term *sārvavāha* means the leader of a company of merchants. The position is even more clear in the *Maitrakanyakāvadāna* in which Maitrakanyaka, the hero of the story, announces his decision publicly by ringing of a bell and inviting other traders of Vārāṇasī to join him.⁶⁴

It seems that the state also encouraged such organised maritime trade ventures. In the *Avadāna* just mentioned, we are told that during the announcement the traders were informed that all the wares would be exempted from various types of taxes and levies namely *śulka* (custom), *gulma* (wharf dues) and *tārapanya* (ferry charges).⁶⁵

This offer, we are told, induced as many as five hundred traders to join Maitrakanyaka. Except this incidental piece of information, the text does not furnish any data regarding the relationship between the maritime traders and the state. However we are inclined to think on the basis of the above mentioned casual remark in our text that the state gave certain concessions including exemption from some taxes with a view to promote maritime trade which not only contributed to the overall welfare of the state but also to the enrichment of the royal treasury.

The maritime trade in comparison to overland trade was much more profitable and ensured a higher and more respectable position in the society. Consequently, ambitious traders and merchants gave up the safety and security of less mobile trades and knowingly and consciously opted for the hazards and dangers of the sea trade. Maitrakanyaka who started his career as a small trader (*aukkarikā*)⁶⁶ gradually rose to the higher rung of the ladder and first became a perfume dealer (*gandhika*)⁶⁷ and then a dealer in gold-ornaments (*hairanyika*).⁶⁸ Despite of the fact that he was leading a comparatively comfortable life and earning a handsome income, he decided to go to the sea in search of more wealth. The attraction

of the large profits of the sea trade was so alluring that the disuasion of his mother and the revelation of the fact that his father who was a sea-trader died during the course of the sea-voyage did not deter him from his avowed objective. The *Avadāna* informs us that he was so much enraged at his mother whom he thought was a stumbling block in the realisation of his ambition that he struck her on the head.⁶⁹

The lure of the get-rich and respectable quickly by undertaking sea trade was so strong that the failure of such ventures (*bhagnayāna-pātra*) did not dampen their spirits and they started pooling their available resources afresh. On the other hand if such a venture proved to be successful (*siddhayāna-pātra*,⁷⁰ *samsiddhayāna-pātra*)⁷¹ it further whetted their desire for material gain and social respectability. The maritime traders were considered a group apart in social hierarchy and much above the practitioners of such trades as small scale trade, perfume-dealing and dealing in gold ornaments. If a person belonging to this group opted for such petty trades, he was looked down upon by other members of the community. In the text, such an option has been called living by unsuitable means⁷².

That the maritime trader earned immense wealth in course of a few years in comparison to the small earnings, e.g. four *kārṣapaṇas* daily by a small trader, eight *kārṣapaṇas* daily by a perfume dealer and sixteen and thirtytwo *kārṣapaṇas* on the consecutive days by a dealer in gold ornaments, made all the difference in material wealth and social status.⁷³

The evidence of the *Avadāna-śataka* further suggests that this profession like all other professions in ancient Indian social structure was gradually becoming hereditary.

Before undertaking the sea journey, the company of traders had to hire a ship and employ attendants and different categories of crew including the captain of the

ship to handle it. In the *Samudrāvadāna* and the *Maitrakanyakāvadāna* we are told that the merchants had to pay a large amount of five hundred *purāṇas* to the owners of ships.⁷⁴

In one instance, the leader of the company is said to have been accompanied by his wife who in the course of journey gave birth to a male child.⁷⁵ This, however, seems to be an exception. In general, the traders did not take their wives or children with them keeping in view the dangers which they had to face in the sea. With the increase in maritime trade, particularly with the countries of south-east Asia, some traders started settling down permanently in these countries after marrying local women. This emerging trend might have prompted some women to accompany their husbands.

Among the dangers, most dreaded by the mariners and sea traders was the sea storm which either deviated the ship from its proper course (*kālikavātena tadvāhānām itas' ca amutaś ca paribhramyate*)⁷⁷ or totally destroyed it. Because of this dreaded nature of the sea-storm it has been equated with a fierce demoness (*kālikā - rākṣasī*)⁷⁸. The ships were also wrecked by monster-sized marine creatures like whale, shark, etc. which have been called *makara-matsya-jāta*.⁷⁹ In the case of the wreck or deviation of the ship, the boarders either died or were stranded in unknown islands where they had to face many problems and had little hope of being rescued. In an *Avadāna* of our text, the difficulties faced by such stranded traders are given in detail. This *Avadāna* also indicates that many of these traders were condemned to live for the rest of their lives in these strange lands in spite of their best efforts to get out of there.⁸⁰ As the resources and devices to rescue the endangered and stranded navigators and maritime traders were not well developed the people naturally fell back upon supplicating various gods and goddesses at the time of their departure⁸¹ and when they really faced the problem, by offering their prayers and performing different types

of rituals. The technical terms for these rituals so performed are *kutūhala-maṅgala* and *svastyayana*.⁸² The deities so invoked were Śiva, Varuṇa, Kubera, Vāyu, Agni, Mahendra, Bhuvi, Tuvimagha, and Viśvadevas.⁸³ The followers of the heretical sects invoked the founders of their respective sects. The traders who believed in Buddhism invoked the compassion and infinite power of the Buddha. After the merchants safely returned home, their families expressed their gratitude to the gods and goddesses by offering flowers, incense and certain objects.⁸⁴

In spite of all these details regarding the preparations for the long, tedious and dangerous journey and the sail for foreign lands in large hired ships, our text does not mention the names of the foreign lands which were their destination. In the *Sārthavāhavadāna*, an island called Ratnadvīpa has been specified as the destination of a *sārthavāha* from Śrāvastī. However, in the present stage of our knowledge, we are not in a position to identify this island which is so often mentioned in the Avadāna Literature.⁸⁵ The name can be treated either as a mythical or a generic term for the islands of south-east Asia which were rich in various types of precious and semi-precious stones. In the *Maitrakanyakāvadāna*, four cities (*nagara*) with the names of Ramanaka, Sadamatta, Nandana, Brahmottara and a fifth city namely Ayomaya are mentioned which were visited by the trader-hero. The first four are said to have been very rich in *maṇi* (gem), *mukta* (pearl), *pravāla* (coral), *jātarūpa* (gold), *rajata* (silver).⁸⁶ The last one is in *ayomaya* (iron). However, all these cities seem to be mythical.⁸⁷

The same problem crops up in regard to the articles which the traders brought back with them from the places they visited. In the two *Avadānas* of the text namely the *Kuṣṭhāvadāna* and the *Sārthavāhavadāna*, we are told that the traders procured plenty of different types of jewels by the sea-borne trade. In the *Muktāvadāna* a certain maritime trader is said to have brought a necklace

of pearls for his wife.⁸⁸ In the *Padmākṣavadāna*, another sea-faring trader is shown to have donated a special type of gem *mahendranīlakamaṇi*, most probably an emerald to the *stūpa* of Vipāśyi Samyaksambuddha.⁸⁹

In conclusion we would like to say that the picture of trade and commerce from circa 2nd century B.C. to 2nd century A.D., based mainly on the evidence of the *Avadāna-śataka* is neither complete nor flawless and many important facets are either missing or incomplete. However, these drawbacks can be removed to a large extent with the help of evidence provided by other sources both archaeological and literary.

GANESH U. THITE

A NOTE ON THE BRĀHMAṆADHAMMIKASUTTA

In the *Brāhmaṇadhammikasutta* (*Suttanipāṭa* II.7) we find some thoughts of the Buddha on the Brahmanical religion in general and on the animal-sacrifice in particular. According to the Buddha, the earlier Brahmanical religion was different from the later one as far as the animal-sacrifice is concerned. The earlier brahmins were noble in all aspects of behaviour and characterised by knowledge and good conduct.¹ They used to beg for rice-grains, bed, garments, ghee, and oil and thereby used to perform a sacrifice, but in that sacrifice they did not kill cows². But slowly there was a change in their attitude particularly after seeing the wealth and women of the kings.³ Then they approached the kings and requested them to perform sacrifices like *Aśvamedha* and *Puruṣamedha*. In these sacrifices, they could get a lot of *dakṣiṇās* in the form of cows, garments, women, chariots, horses, etc. They then became more and more greedy.⁴ They then approached the kings again and then in those sacrifices thousands of cows were killed.⁵ Earlier, there were only three diseases namely desire, hunger and old age. But when people started killing cows, the number of diseases increased upto ninetyeight.⁶

Now it will be interesting to examine critically these thoughts of the Buddha in the context of the Vedic evidences.

We can very well understand the attitude of the Buddha towards animal-killing or cow-slaughter in the Vedic ritual. Even in the Vedic texts we notice that the description of the act of animal-killing contains some euphemistic expressions and the thoughts of *ahimsā* are coming up even in the ritualistic circles.⁷ Historically speaking we may remark that the attitude of the Buddha towards animal-killing was not favourable 'only in the Brahmanical ritualistic context.' Elsewhere he could not stop the slaughter of animals. Moreover, the Buddhists are not characterised by vegetarianism and their justifications of non-vegetarianism are full of after-thought and escapism. But my main concern here is that the chronology and sequence, in connection with the animal-sacrifice and with the cow-sacrifice, as given by the Buddha is not in strict conformity with the corresponding references in the Vedic literature.

In this context let me mention a story given in the *Aitareya-Brāhmaṇa*.⁸ In this story different stages of animal-sacrifice are mentioned. Originally man was a sacrificial animal. Then horse, then ox, then sheep and then he-goat became sacrificial animals. It is said there that the sacrificial essence went away from one animal to the next animal and ultimately it entered into the Earth. Through the Earth it entered into rice-grains and through them into the sacrificial bread (*puroḍāśā*). So ultimately we find that the sacrificial bread is supposed to be animal in a mystical way. This story throws some light on the evolution of sacrifice according to the Vedic texts. It is clear that the animal cow or ox was used as a victim in days earlier than those of the sacrificial bread. Actually the use of sacrificial bread was the last stage in the course of the history of animal sacrifice. The sacrificial bread then became established in the Vedic ritual very prominently. It also represents the development of the thoughts on *ahimsā* in the context of the Vedic ritual. But this goes against what the Buddha has said. According to him vegetarian offerings proceeded the animal-offerings. There is thus no agreement between

the two views. The thoughts of the Buddha on the ritual tradition of the *Brāhmaṇas* do not find any support in the Vedic texts themselves.

Secondly the sacrifices like *Aśvamedha*, etc. are mentioned by the Buddha as an intermediary stage following the vegetarian sacrifices and proceeding the cow-sacrifices. This also goes against the Vedic ritual tradition. For the sacrifices like *Aśvamedha* and *Soma* sacrifices and as such do contain the cow-slaughter in the form of a sacrifice of 'Anubandhyā-vasā-cow-sacrifice'⁹. So the conclusion is that the cow-sacrifice was quite old and even older than any other sacrifice. The evolution of Vedic sacrifices indicates that the cow-sacrifices were earlier and bread-sacrifices were a later development which may be due to the growth of the *ahimsā* doctrine on the one hand and due to the simplicity and less expensiveness of the bread, etc. on the other. In any case the view that earlier there was no cow-slaughter and it came and grew only afterwards when the *brāhmaṇas* became more greedy is not, really speaking, corroborated by the Vedic texts.

It will be interesting to throw some light on the word *niraggala* which occurs in the *Brāhmanadhammikasutta* and elsewhere also, in Pali-literature as one of the sacrifices mentioned in the list of Vedic sacrifices. They are read in the *Brāhmanadhammikasutta* :

tato ca rājā saññatto brāhmaṇeti rathe sabho /
assamedham purisamedham vacapeyyam
sammāpāsam niraggalam /
ete yāgā yojitvāna brāhmaṇānām adā dhanam /
 Verse 20.

According to Kane *Niraggala* might be same as the *Viśvajit* sacrifice.¹⁰ According to Kosambi *Niraggala* must be a later form of the *Aśvamedha* which consisted of letting the horse free (the word *Niraggala* literally means unbarred, unlimited, free, etc.)¹¹.

According to Bapat, who takes the help of the Pali commentaries, *Niraggala* is a variety of horse sacrifice called *Sākhamedha* - so called because the sacrifice does not have any bar or obstruction.¹² It consists, according to these commentaries of nine subsidiary sacrifices, and the tenth day is the *Viśvajit* sacrifice. Bapat, having taken clue from information, goes a little further and says that *Niraggala* means *Sarvamedha*. It is so called because there is no limit to the things to be given as gifts (*dakṣiṇā*) in their sacrifice. It may be noted that all these views are of the nature of conjecture and no view is based upon any Vedic textual evidence.

In the *Mahābhārata* the word *nirargala* is used as an adjective of *Aśvamedha* sacrifice.¹³ In the *Vāyupurāṇa* the word *nirargala* is used as an adjective of sacrifices in general.¹⁴ Sometimes the word *nirargala* is used as an adjective of the *Sarvamedha* sacrifice.¹⁵

It may now be remarked that neither the Buddhist authors nor those of the *Mahābhārata* and purāṇic literature knew the exact meaning of the word *nirargala* / *niraggala*. So also none of the modern scholars (mentioned above) has been able to explain the word *nirargala*. With the help of the proper Vedic reference, I therefore want to draw the attention of the scholars to a passage in *Mānavaśrautasūtra* (a properly ritualistic text) VIII. 18.4 where we read:

*sarvāṇāṃ vanaspatīnāṃ purastāt sviṣṭakṛto
rasam juhōti eṣa eva nirargalaḥ.*

So according to this passage, *nirargala* is a minor rite and not a sacrifice like *Aśvamedha* or *Sarvamedha*. This rite is a part of the *Sarvamedha* sacrifice. The rite consists of offering of the juice of all the trees. This is a very important and direct reference which can solve the problem of the meaning of the word *nirargala* / *niraggala*.

Buddhist texts have elsewhere also mentioned the word *niraggala* as the name of a sacrifice.¹⁶ The Buddhist texts sometimes also use the word *nirgaḍa* (instead of *niraggala*) as an adjective of the sacrificer in general.¹⁷ *The Lalitavistara* (I.341) and *Mahāvīyutpatti* (43) also use the word *nirargaḍa* as an adjective of the sacrifices in general. In the *Majjhimanikāya* (I.139) the word *niraggala* is used in the Buddhist doctrinal sense. Thus a monk who is free from the five fetters is said to be *niraggala*.

A general remark can be made here regarding the knowledge and study of the Vedic ritual in general. Neither epic-purāṇic nor the Buddhist tradition is aware of the technical information about the Vedic ritual details. They have only a few broad notions about the Vedic rituals, but hardly any detailed information. This is perhaps due to the fact that the Vedic ritual as such was very highly specialised field (limited to only a few *Brāhmaṇas* - and not all the *Brāhmaṇas*).

K.A. NEELAKANTAN ELAYATH

TYPES OF SENTENCES IN ADVAITAVEDĀNTA

In Advaita though *śabda* as a means of valid cognition belongs to the sphere of *avidyā*, liberation is attained through a process which requires *śabda*. The *mumukṣu* not only has to hear the *mahāvākyas* like *tat tvam asi* and *aham brahmāsmi* but also has to understand the meaning of these sentences. It is in this context of interpreting the *mahāvākyas* that Advaitins are concerned with the problems of sentence-meaning. What is the meaning of a sentence and what are the types of sentences? In Advaita works these two questions largely figure in discussions on sentence meaning. Though they are primarily concerned with upaniṣadic sentences the principles evolved by them are applicable to *laukikavākyas* as well.

A clear definition of a sentence appears for the first time in the *Mīmāṃsāsūtras* of Jaimini: *arthaikatvāt ekam vakyam sākāṅkṣaṃ cet vibhāge syāt*¹ 'a group of words conveying a single idea if on analysis found to have *ākāṅkṣā* or mutual expectancy is called a sentence'. Bhartṛhari refers

to a similar definition as one of the well-known definitions of a sentence² and the later Mīmāṃsakas are said to have given other definitions also.

The view that groups of words revealing a single idea constitute a sentence is more or less accepted by Advaitins. The controversy seems to be regarding the real import of a sentence. It is traditionally held especially by Vaiyākaraṇas that the meaning of a sentence is *saṃsarga* 'mutual association of word-meanings' or *bheda* 'mutual exclusion of word-meanings'. Later Kaiyaṭa argued that these two views attributed to Vājapyāyana and Vyāḍi respectively are not exclusive as each one implied the other,³ and *saṃsarga* came to be recognised as the meaning of a sentence. Thus from the point of view of import, only one type of sentence is recognised that which reveals *saṃsarga* or mutual association of word-meanings as the meaning of a sentence.

Though this is the generally accepted view on sentence-meaning the whole question was re-examined by Advaitins in connection with the interpretation of the *mahāvākyas* of the Upaniṣads. The Advaita tradition not only retains the early differences between *bheda* and *saṃsarga*, but also understands them in two different senses. According to them these terms refer to the mutual relation of word-meanings and are applicable to two different types of sentences.⁴

Accordingly in certain types of sentences, *bheda* is the import of a sentence. The example given is *daṇḍena gām ānaya* 'bring the cow with a stick'. The constituent words of this sentence reveal *bheda* or difference and presents to the mind a manifold of inter-related things. In all such

cases, what is ultimately presented is *bheda* and it is denoted by different case-endings (*bhinna-vibhakti-nirdiṣṭa*).

The other type of sentence is where the sentence-meaning is *saṃsarga*. The example given is *nīlam utpalam* 'the lotus is blue'. The sentence here presents to the mind a single object and its qualifying features are indicated by the constituent words and that too by the same case - endings (*abhinna-vibhakti-nirdiṣṭa*). In the former type of sentence, i.e. *bheda*, the constituent words not only retain their diversity of meaning but also point to different objects. Here in *saṃsrṣṭa-vākya*s though the words retain the diversity of their meanings they ultimately point to a single object. The difference between these two types of sentences was overlooked by later Advaitins and both sentences are referred to as *saṃsrṣṭa-vākya*s 'sentences that reveal *saṃsarga* as the import'.

Besides these two, there is a third type of sentence called *akhaṇḍārtha-vākya*, with which Advaitins are primarily concerned. Such sentences are identity-statements and reveal an impartite or mono-lythic meaning without any relations. As in other sentences revealing *saṃsarga*, here the verbal cognition does not involve any relations but simply indicates the substantive or *prātipadika*. The constituent words used in the same case-endings reveal an impartite meaning (*akhaṇḍārtha*). The examples given to this are so '*yaṃ devadattaḥ* 'this is that Devadatta', *tat tvam asi* 'thou art that', *satyaṃ jñānam anantaṃ brahma* 'Brahman is truth, knowledge and infinite'.

The identity-statements, as a separate class by themselves was first noticed by Śaṅkara in the *mahāvākya*: *tat tvam asi*.⁵ He says that the sentence presents to the

mind the real identity of two things (Ātman and Brahman) and is different from such statements as *ādityo brahmā* 'The Sun is Brahman' and *siṃho 'si* 'you are a lion' where the primary meaning is not at all intended (*upacarita*). The nature of identity-statements such as *tat tvam asi* and so '*yaṃ devadattaḥ*' were clearly brought out by later Advaitins like Sarvajñātman, Citsukha and Madhusūdana and they declared that such sentences convey only *akhaṇḍārtha*.

Citsukha in this *Tattvapradīpikā* gives two definitions of *akhaṇḍārtha*:⁶ (1) *aparyāyaśabdānām saṃsargagocarapramiti janakatvam* - when the non-synonymous words of a sentence reveal an integral meaning without any mutual relation as the content of a valid knowledge that sentence has an *akhaṇḍārtha*; (2) *aparyāyaśabdānāmekapratīpadikā rthamātraparyavasāyitvam* - when the non-synonymous words of a sentence denote the mere meaning of a stem it is a case of *akhaṇḍārtha*. All identity-statements like *tat tvam asi*, so '*yaṃ devadattaḥ*.. etc. and sentences describing the essential nature of things (*svarūpalakṣaṇa*) according to him are instances of *akhaṇḍārtha*.

The first definition of *akhaṇḍārtha* was later modified by Madhusūdana and the word *saṃsarga* in Citsukha's definition is explained as *padavṛttismāritātirikta*⁷. It means that the inter-relational meaning is different from that which is recalled by the denotative power of words in that sentence. Both Anvitābhīdhānavādins and Abhihitānvayavādins explain the sentence-meaning in *samsṛṣṭa-vākyas* as being cognised by the primary and secondary denotative powers of words respectively. Both

according to them fall outside the verbal cognition and is not known (*ajñāta*). Hence the sentence meaning is not ultimately recollected by the power of words (*padavṛttismārita*).

Thus, in all statements of identity and in all statements descriptive of the essential nature of a thing, the import of the sentence is said to be *akhaṇḍa*. And such sentences are of a unique type. Advaitin's classification of certain sentences as *akhaṇḍa* also does not contradict the original definition of sentence given by Jaimini. The conditions of knowing the meaning of a sentence such as *ākāṅkṣā*, *yogyatā*, etc. are also fulfilled in such statements. Madhusūdana's explanation in this context is most appropriate. He points out that *ākāṅkṣā* is that without which words cannot present the intended meaning (*tātparyaviśayānvayānanubhāvavakatvamākāṅkṣā*). This intended meaning can be either *saṃsarga* or *akhaṇḍa*. As the sentences like *tat tvam asi*, etc. reveal the intended meaning of identity the constituent words have *ākāṅkṣā* and therefore should be treated as sentences.

Though the classification of sentences as *bheda*, *saṃsarga* and *akhaṇḍa* was made by Advaitins mainly to interpret the *mahāvākyas* of the *Upaniṣads* the classification holds good also in non-vedic sentences, and can be applied fruitfully in any discussion on sentence-meaning.

SREERAMULA RAJESWARA SARMA

**MATHEMATICAL LITERATURE IN TELUGU:
AN OVERVIEW ***

The *Pāṇḍurīgaṇitamū* (=PG), a Telugu rendering of Mahāvīra's *Gaṇitasārasaṃgraha*¹ (=GSS) by Pāṇḍurī Mallana, is generally accepted as a product of the late 11th century. Mallana states that Rājarāja gave an *agrahāra* to his grandfather, also called Mallana. Hence the grandson Mallana must be a younger contemporary of Nannaya and the PG the second extant work in Telugu after Nannaya's *Āṇḍramahābhāratamū*. At the same time, the PG is also the earliest known translation of a scientific text from Sanskrit into any regional language.

Thus the importance of PG, whether in the history of Telugu literature, or in the history of mathematics in the Andhra region, or in the history of translations of scientific texts in India, can hardly be overemphasised.² Yet so far not much interest has been shown in the study of PG.³ In fact, the full text is not even available in print. Only a small portion was published from Tirupati in 1952 and this was edited by the great Telugu savant Veturi Prabhakara Sastry.⁴ About the history of mathematical literature after Mallana we know still less.⁵ We are thus depriving ourselves of a part of our heritage which ought to be as precious as any other aspect of Telugu past. In this paper I wish

to present the little we know about the history of mathematical literature in Telugu and plead for systematic efforts to study this sadly neglected area.

As translator, Mallana's performance is impressive. The lucidity with which he renders the terse Sanskrit of Mahāvīra is worth emulating by every modern translator of scientific texts. His way of handling mathematical rules or examples containing large numbers — some examples have as many as 36 digits — is unrivalled even in Sanskrit. But is Mallana just a good translator, or did he make any original contribution of his own? This cannot be answered either way until there is a good critical edition of the full text or a complete picture of the manuscript tradition of PG.

Nevertheless, on the basis of the printed edition from Tirupati and the descriptions of the mss of PG at the Government Oriental Manuscripts Library, Madras,⁶ (=GOML) some tentative conclusions can be drawn. The original GSS in Sanskrit contains a *saṃjñādhikāra* and eight chapters on so many topics: 1. *parikarma*, 2. *kalāsavarṇa*, 3. *prakīrṇaka*, 4. *trairāśika*, 5. *miśra*, 6. *kṣetra*, 7. *khāta* and 8. *chāyā*. The Tirupati edition of PG breaks off in the middle of the second chapter. A comparison of this edition with the Sanskrit original shows that PG omits certain portions but adds many others. Thus, while GSS teaches 5 methods of squaring and 7 of cubing, the Telugu version has only one each and avoids all algebraic methods. At this stage it is difficult to say whether this omission is due to Mallana himself or to a later redactor. The additions, on the other hand, are of immense interest to us.

The *Samjñādhikāra* of GSS defines the numerical and metrological terminology. Of numbers, it enumerates the names of 24 decimal notational places, that is from 10 to 10²³. Instead of translating these Sanskrit stanzas, PG (p.12) just reproduces them but adds three more stanzas

in Sanskrit, thus continuing the notational places up to 36.⁷

In the Sanskrit original, Mahāvīra gives the pan-Indian units of measurement, which he calls *magadhamāna*. In their stead, Mallana offers the units prevailing in Āndhradeśa in his time. It is fairly certain that these are not interpolations but were introduced by Mallana himself, since the same units are employed in several examples. These units pertain to the following measurements : 1. *bhūmipramāṇamu* (linear measure), 2. *kumṭa*^o (area), 3. *udaka*^o (volume of liquids), 4. *dhānya*^o (volume of grain), 5. *kāmcana*^o (weights of gold), 6. *tulā*^o (weights of other commodities), and 7. *kāla*^o (time) (pp. 4-11). It is needless to emphasise that the names of these units are of great value both for the economic history and the history of Telugu language.

The third type of addition relates to mathematics proper. PG contains some 45 additional examples under multiplication and 21 under division, which are not found in Sanskrit. All these extra examples have one common feature, viz, to produce numbers containing a symmetric arrangement of digits. The Sanskrit original has also a few and Mahāvīra calls them “necklace numbers” (*kaṇṭhikā*) because the symmetric arrangement of digits is like the symmetric arrangement of beads in a necklace.⁸ PG abounds in necklace of diverse patterns. For example, necklaces made up of just unities :

$$\begin{aligned} 111 &= 37 \times 3 \\ 1111 &= 101 \times 11 \\ 11111 &= 271 \times 41 \end{aligned}$$

$$\begin{aligned} 111111111 &= 37 \times 3003003 &= 3 \times 37037037 \\ 11111111111 &= 37 \times 3003003003003 &= 101 \times 1100110011 \end{aligned}$$

and finally 111 111 111 111 111 111 111 111 111 111 111 =

$$1\ 763\ 668\ 430\ 335\ 097\ 001\ 763\ 668\ 430\ 335\ 097 \times 63,$$

or with unities intermingled with pearl-like zeros

$$\begin{aligned}
 100010001 &= 14287143 \times 7 \\
 1100110011 &= 157158573 \times 7 \\
 1000000001 &= 142857143 \times 7 = 1298013 \times 77 \\
 10101010101 &= 3367003367 \times 3 = 777000777 \times 13.
 \end{aligned}$$

And here we have the largest pearl necklace :

$$10\ 000\ 000\ 000\ 000\ 000\ 000\ 01 = 20\ 408\ 163\ 265\ 306\ 122\ 449 \times 49$$

Mallana introduces a new formation and calls it “moon-like” number because here the digits increase from 1 to n and then decrease up to 1 just as the phases of the Moon gradually increase and then decrease in an *amānta* lunar month, e.g.

$$12345654321 = 111111 \times 111111 \text{ (p. 24⁹)}.$$

A variation of this is where each digit occurs twice as in

$$\begin{aligned}
 1122334455667788998877665544332211 &= \\
 124\ 703\ 878\ 407\ 532\ 110\ 986\ 407\ 282\ 703\ 579 &\times 9.
 \end{aligned}$$

There are also reverse cases of the Moon numbers with digits first decreasing from n upto zero and then increasing upto n , like the Moon’s phases in a *pūrṇimānta* month :

$$\begin{aligned}
 6543210123456 &= 146\ 053\ 847 \times 448 \\
 9876543210123456789 &= 1\ 097\ 393\ 690\ 013\ 717\ 421 \times 9 \text{ (p. 26¹⁰)}
 \end{aligned}$$

and other amusing formations without a label like

$$\begin{aligned}
 777778888899999 &= 2\ 710\ 030\ 971\ 777 \times 287 \\
 112233445566778899 &= 12\ 470\ 382\ 840\ 753\ 211 \times 9 \\
 9 \times 666666665555555 &= 5\ 9999999\ 8\ 9999999\ 5.
 \end{aligned}$$

It should be noted that often for one product several sets of factors are given. Again it is difficult to say whether

all these are Mallana's own innovations or interpolations of a later age. But even if they are interpolations, they show the fondness of the Telugus for such magic numbers, and this predilection may have been engendered by Mallana through his mellifluous verses like the following in *Mattakokila* metre :

aṣṭacamḍrulun aṣṭabāhulun aṣṭarāmulun aṃbudhul
aṣṭasaṃkhyalun aṣṭabāṇamul aṣṭaśāstravitānamul
aṣṭaśailamul aṣṭahastulun aṣṭanamdanarāsulun
srṣṭilopala nūṭayōkkaṭa jēppu pālgona labdhamul.
 (p. 42).

The verse instructs us to perform the following divisions:

$$11111111 \div 101 = 1100011; \quad 22222222 \div 101 = 2200022$$

$$33333333 \div 101 = 3300033; \quad 99999999 \div 101 = 9900099.$$

Note that here all the three quantities - the dividend, divisor and quotient - are necklace numbers.

It is indeed likely that problems such as these which produce startling results attracted the attention not just of serious mathematicians who invented more problems like these but also of laymen who posed these problems as puzzles or riddles under the village tree.

Reverting to PG, while it is difficult to say whether Mallana added anything new into the chapters, it is certain that his Telugu version contained (1+) 8 chapters like the original. At a later stage, two new chapters called *Suvarṇagaṇitamū* and *Sūtragaṇitamū* were added and PG came to be known as the *Daśavidhagaṇitamū*.

From the description of the mss of PG at GOML, one gets the impression that the popularity of PG, paradoxically enough, inhibited the composition of new mathematical texts in Telugu. Instead of writing a new book, successive generations of mathematicians added their contributions, often in equally beautiful verse, into the

appropriate chapter of PG. Only a few of these can be identified as interpolations as they refer to persons or events posterior to Mallana.¹¹ Copyists also interpolated verses from other sources. Furthermore, as with most of such popular books, mss containing single chapters began to be made and these continued a separate existence of growth and interpolation.¹²

The chapter on area measure called *Kṣetragaṇitam* has been the *vade-mecum* of the village *Karaṇams* through the centuries and in their hands it underwent changes of all kinds; in particular, units of length and area were changed in accordance with the local usage. At the beginning of the last century, one such copy fell into the hands of Benjamin Heyne who translated it with the help of "a Brahmin above eighty years of age ... who could repeat the greatest part of the work by heart."¹³ The text Heyne used went through so many changes that it is hardly recognizable as a translation of GSS. Therefore, the reconstruction of PG as Mallana may have written it is going to be a challenging task.

According to two stanzas quoted by Cagamti Sesayya, one Elugamti Peddana was not satisfied with the way Mallana rendered the second and third chapters of GSS into Telugu and so wrote his own *Bhinnaprakīrṇagaṇita*.¹⁴ P. T. Raju says: "Two mathematical works of the eleventh century, *Gaṇitasārasaṅgrahamu* and *Prakīrṇagaṇitam*, written by Pāvulūri Mallana and Elugamti Peddana respectively, are now available."¹⁵ But my search for a printed edition or a ms of Peddana's work has been in vain, nor do I know on what evidence P. T. Raju assigns Peddana also to the 11th century. From the above-mentioned stanzas it appears that by Peddana's time, PG was already known as *Daśavidhagaṇitam*.

The rest of the known history of mathematical literature in Telugu can be related in a few sentences. In the 16th century, Koḍūri Vallabha or Vallabharāya, son

of Rāghavasūri and grandson of Erraya, translated Bhāskara's *Līlāvati* into Telugu at the instance of Bommālāṭa Kālayya, an officer at the court of Acyutarāya of Vijayanagar.¹⁶ At the end of the 16th or the beginning of the 17th century, Pimṅaḷi Veṃkaṭādri, a descendant of Pimṅaḷi Sūrana, wrote *Kṣetragaṇitam* based on PG.¹⁷ In the last quarter of the 19th century, Tadakamalla Veṃkaṭakṛṣṇārāvu translated Bhāskara's *Līlāvati* and *Bījagaṇita* into Telugu.¹⁸ GOML has a few other anonymous texts, one of which has the title *Veṃkaṭeśagaṇitam* because it is dedicated to the deity of that name.¹⁹ This is all I could gather from the catalogues of GOML. But there are many other manuscript collections and there must be many more mss in private hands. I came across two mss through a chance enquiry and I have hopes that an organised effort will bring many more mathematical texts to light.

As I was looking for mss of PG during my last visit to Andhra Pradesh, Sri Mantri Gopala Krishna Murti, a paternal friend, very generously gave me two copybooks filled by his father, Mantri Panakalu Rayudu (1883-1928). The latter was a school master in many villages in the then Guntur district. His main passion, however, was mathematics and he was fond of asking deceptively simple mathematical riddles. He read widely and collected material on mathematics from both Telugu and Sanskrit sources in his copybooks. From him, his son inherited remarkable abilities of traditional computation: with amazing speed he once constructed for me a magic square of the order twentyseven. Of the many copybooks filled by his father, Gopala Krishna Murti could rescue only two; but these contain much interesting material. Besides a large extract of PG, there is a small treatise in 40 stanzas covering the whole range of arithmetic. There is no title, nor author's name, but it must emanate from Muktinūtalapadu near Ongole, since each stanza concludes with the refrain *muktinūtalapāṭi-sthalakhelā dīnabandho veṇugopālakā*.²⁰ There are also some stray verses from a *Muktinūtalapāṭi*-

Nṛsiṃhajña-Gaṇitamū, invoking this time *callamalleśa*, *muktipuranivāsa*, *īśā*. The mss also contain an anonymous chapter on *trairāśika*, and some mathematical riddles in Telugu and Sanskrit.

But the most remarkable find is the solution to what is known as Josephus problem. The problem consists in arranging in a circle two equal groups of good persons and bad fellows in such a manner that each n-th person to be removed from the circle must be a bad fellow. Though named after the Jewish historian Flavius Josephus (37-100 A.D.), this problem was not known in Europe before the 10th century. Japan is the only other place where this problem was known. It became popular there some time after the 12th century.²¹ This is the first time that I come across this problem in any Indian source. The Telugu version which I now discovered runs as follows: 15 brahmins and 15 thieves had to spend a dark night at an isolated temple of Durga. At midnight, the goddess appeared in person and wanted to devour just 15 persons because she was hungry. The thieves naturally suggested that she should consume the 15 soft-limbed brahmins. But the brahmins proposed that all the 30 would stand in a circle and that Durga should eat each ninth person. the proposal was accepted by Durga and the thieves. So the brahmins arranged themselves and the thieves in a circle, telling each one where to stand. Durga counted out each ninth person and devoured him. When 15 were thus eaten, she was satiated and disappeared, and only brahmins now remained in the circle. The problem is: how to arrange the brahmins and thieves in the circle.²² The answer is couched in a *Mattebhavikrīdita*:

yuga-bāṇākṣi-dharāgni-candra-śāśi-bāhu-dvandva-rāmemḍulaṃ

yugalī-karṇakalā-dvisaṃkhyā-guḍigān ūhiṃci
yantyastha vi-

*mōgi viprul jayam ōṁdi taskarulu nirmūlambulair
amdarun.*

A circular diagram with 24 points, each labeled with either 'T' or 'B'. The labels are arranged in a repeating pattern around the circle. Starting from the top and moving clockwise, the sequence of labels is: T, B, T, B, T, B, T, B, T, B, T, B, T, B, T, B, T, B, T, B, T, B, T, B. The labels are positioned at regular intervals around the circle, with 'T' and 'B' alternating every point.

Another variant - it was not known in Europe - is so to arrange 30 brahmins and 30 thieves that each 12th person to be removed must be a thief. The solution is given in a *Campakamālīkā* :

*aruvadi yaṁkēlum ravulan aṁdina corulu nilva
viprulaṁ -*

*duru dharaṇīṃdu-candra-kara-dor-bhuja-bhū-
guna-vahni-bhūṃvi-bhū-*

dharāṇi-dharākṣi-soma-vasudhā-kṣiti-bhūrvī-
dhāritrī-vārdhi-doh-

*sthīraluśāsī-dvi-tarka-sāra-cid-dharaṇīmdu-dṛg-
abdhī-somulun.*

Here also there are pairs of numbers, the first one of brahmīns and the second of thieves : *dharāṇi*, *iṃḍu* (1, 1,) ; *candra*, *kara* (1, 2); *dor*, *bhuja* (2, 2); *bhū*, *guṇa* (1, 3); *vahni*, *bhū* (3, 1); *urvi*, *bhū* (1, 1), *dharāṇi*, *dhara* (1, 1); *akṣi*, *soma* (2, 1); *vasudha*, *ksiti* (1, 1); *bhū*, *urvi* (1, 1); *dharitri*, *vārdhi* (1, 4); *doḥ*, *sthira* (2, 1); *śāsi*, *dvi* (1, 2); *tarka*, *śara* (6, 5); *cit*, *dharāṇi* (1, 1); *iṃḍu*, *dr̥g* (1, 2); *abdhi*, *soma* (4, 1).

Unfortunately we do not know where the late Pānakālu Rāyudu copied these stanzas from. His background and the other material in his copy books indicate that these are not versifications of the riddles learnt from some modern western source. That these are, on the contrary, part of the floating indigenous literature of riddles is confirmed when Sri Nannapaneni Subba Rao, a farmer in my village near Ongole, posed the first of these riddles to me. His solution is naturally the same, but formulated differently, using ordinary numbers :

viprulu naluvuru, *prathamāṃśamunana aidu* (4, 5)
toṭa viprulu reṃḍu, *dōṃga yōkaḍu* (2, 1)
dviḷulu mugguru, *sthiramugān ōkka dōṃga* (3, 1)
dharāṇīśvaruḍ okaṃḍu, *daskarulu reṃḍu* (1, 2)
viprul iddaru, *viḍi dōṃgalu mugguru* (2, 3)
brāhmaṇuḍ okkaḍu, *baṃṭulu reṃḍu* (1, 2)
agrajanmulu reṃḍu, *aṭumīdan ōka dōṃga* (2, 1).

Two versions of the same riddle in the same geographic area does indeed demonstrate the wide popularity of mathematical riddles in Andhra Pradesh²³. Whether this is an offshoot of the popularity of the mathematical literature, or whether riddles — mathematical or otherwise — are transmitted in a different process independent of literature, is a question I am not competent to answer. But a collection of such mathematical riddles would certainly enrich the history of mathematics.

I may conclude this paper with a plea that an organised effort should be made by some university of Andhra Pradesh to save this mathematical heritage of the Telugus. The effort should be directed first at a survey and collection of all the mss on mathematics in public and private collections, and then at preparing critical editions, at least of the *Pavuluriganitamu*.

18. *Ibid.* Nos. 2274, 2279.
19. *Ibid.* No.2281.
20. I hope to publish this text soon with a mathematical commentary. Given below is a specimen, which states that the area of a circle, when multiplied by 14 and divided by 11, is equal to the square of its diameter (a) and that the area divided by a quarter of the diameter equals the circumference (c).
ilamānaṃbu caturdaśeśvarulace hēccimci bhāgiṃci yā
phalamuṃ mūlamu śēya vyāsam agu tatpādāṃśace
dhāruṇī
phala-rāśiṃ bhajiyiṃpa sthūlavalayaṃbau vṛttabhū
muktinū -
talapāṭi-sthalakhela dīnajanabandho veṇugopālakā.

since $a = \pi d^2/4$, $d = \sqrt{ax14} \div 11$

since $c = \pi d$, $a \div d/4 = \pi d^2/4 \times 4/d = \pi d = c$.

22. In Germany, the solution is provided by the mnemonic line "Gott schlug den mann in Amalek, der Isreal bezwang," where the numerical values of the successive vowels ($a = 1$, $e = 2$, $i = 3$, $o = 4$, $u = 5$) indicate alternately the numbers of the good men and bad fellows to be arranged in the circle.
23. After this paper was completed, I came to know that this problem is discussed in the *Peddabālaśikṣa*. Perhaps it is the source of dissemination.

K.V.VENKATESWARA RAO

SIGNIFICANCE OF THE TERM
'SAṆKAROJJHITAḤ' IN THE DHVANYĀLOKA

Ānandavardhana in his *Dhvanyāloka* defines suggestion as: "The poetry, wherein the word and meaning both becoming secondary, suggest the implied meaning is named by scholars as suggestion or *dhvani*." This is an apt and comprehensive definition in a nutshell. He also ably refutes the theories of those who do not believe in suggestion and who named it otherwise. He does not agree that *dhvani* is included under figures of speech and proves every thing in support of his theory. He, by explaining the *dhvani*, refers to the significance of it in appropriate contexts either through *kārikās* or mnemonic verses. This is in one way to substantiate his theory.

One of such explanatory *kārikās* is '*tatparāṇ eva*'¹ etc. In this, he wanted to substantiate what has already been said in the definition of suggestion. It means: "Where-

in one finds both the word and meaning solely directed towards the suggested meaning, should be taken for granted as real cases of suggested poetry.” Here, in this emplanatory *kārikā*, the significance of the word *saṅkarojjhita* is discussed. One of the commentators on this work writes : “Wherein both the word and meaning are directed towards the suggestion and where there is no scope for the figure *saṅkara* or combination of figures there it becomes a case for suggestion.”¹

Quite contrary to this is the explanation in the *Locana* : *saṅkareṇālaṅkāranupraveśasambhāvanayā ujjhita ity arthaḥ. saṅkarālaṅkāreṇeti tv asat; anyālaṅkāropalakṣaṇatve hi kliṣṭam syāt.* Here, there is no scope for the combination of the figures because it is already said that figures are based purely on the relation of the expressed and the expression. This being the fact, there is no point in prohibiting the association of *saṅkara*. On the other hand it is sad that the very name *saṅkara* itself prevents the possibility of idea that it is suggestion.

Even if one takes this as a simple combination of a figure of speech in general with the suggestion and not the combination of two figures, that is also not tenable. The very term *alaṅkāra* denotes that it is unimportant because it always stands to beautify others. When the suggestion is considered to be *aṅgī* 'important', the figure of speech is always inferior in comparison with suggestion. No fool would say that ornaments are superior to the human being. While that is the case, what is the use of the employment of the word *saṅkarojjhita* in the

explanatory verse? When both the word and meaning are solely directed towards the implied meaning where is the chance for a figure to dominate the suggestion? Even if there is a figure of speech in between, it would only beautify that suggestion towards which the word and meaning are solely directed. In case of equal importance of both the expressed figure and the suggestion, it will be one of the varieties of the *guṇībhūtavyaṅgya*. Some may say that the significance of the term *saṃkarojjhitah* may be best said in such cases where a kind of perplex condition persists. According to them that is a kind of perplexity as what is important either the figure of speech or the suggestion. To avoid such confusion Ānandavardhana might have used this word. For instance the examples of the *guṇībhūtavyaṅgya* may be taken. In this variety the artistic excellence of the expressed sense becomes greater than that of the suggested, while both happen to be side by side. Even in such cases, the minds of literary critics perceive what is beautiful, what is important, what is intended by the poet and so on and according to its position they will take it. There would not be any perplexity here. Still the aim of the good poets must be to see that no perplexity is experienced anywhere. This is a message given by Ānandavardhana to those who are beginners and also to those who are exceedingly fond of figures of speech. That is why *dhvanikāvya* is named *uttamakāvya* and *guṇībhūta* is named *madhyamakāvya*, the former is always preferred to the latter.

Ānandavardhana could as well do away with this term *saṃkarojjhita* because what he said about the

importance of suggestion is quite sufficient. The significance of this term, however, lies in giving emphasis on the making and appreciation of the *uttamakāvya* as the supreme, though the *guṇībhūtavyaṅgya* is also said as a type of poetry.

B.S.L. HANUMANTHA RAO

THE KĀLĀMUKHAS IN ĀNDHRADEŚA

Sectarianism is a natural development in any religion, and that is the result of certain historical forces. As one religion comes into contact with others and as religious and philosophical thought advances there arise differences in the methods attaining salvation. Gradually the differences crystallise into different sects. The number of sects in a religion may indicate its intellectual vitality.

Śaivism is an ancient religion in Andhra and sectarianism developed in it from about the eighth century A.D. The Malkāpuram inscription dated in A.D. 1261 mentions four important schools: Pāsūpata, Kālānana, Śivaśāsana and Śaiva.¹ The Tripurāntakam record dated in A.D. 1290 notes a number of sects among the Āndhra Śaivites: Vīravrata, Māheśvara, Śaiva, Pāsūpata, Mahāvratā, Kālāmukha, Yāmiḷa and Bhairava.² Besides, we come across in literature and Siddhas and Kāpālikas.³

However, the Kālāmukhas were the most popular and widespread in Andhra between the 9th and 12th centuries. The Kālāmukhas are an offshoot of the Pāsūpata school which is taken to have been the earliest of the Śaivite

sects.⁴ Lakulīśa or Nakulīśabhattāraka is held as its founder. His teachings formed into the Lakulīśvarāgama and it is the Bible of the Pāśupatas.

There is no unanimity on the date of Lakulīśvara. Several scholars prefer to place him in the first half of the 2nd c. A.D.⁵ But attempts are being made to claim greater antiquity for the school.⁶ At the time of Alexander's invasion (326 B.C.), according to the classical writers, there was a tribe called Sibeoi in Punjab who dressed themselves in animal skins and were equipped with clubs, the two striking features of the Pāśupatas. *Lakula* means club and in the iconographic representation, Lakulīśvara is shown holding a club. On the coins of the Kushan king, Vema Kadphisis (1st c. A.D.), a deity is represented with a club and some scholars are inclined to identify him with Lakulīśa. But he is more convincingly identified with Viṣṇu, Gadādhara.⁷ The VII R.E. of Aśoka Maurya mentions *babbanesu ajīvikeṣu* which means Brāhmanical Ājīvikas.⁸ There were certain common practices between the Ājīvikas and Pāśupatas. Both smeared their bodies with ashes, sat painfully on heels, hung from trees like bats and reclined on thorns. Because of such close resemblance in the practices of the sects, Aśoka should have called the Pāśupatas as Brāhmanical Ājīvikas.⁹ In the light of the above pieces of evidence, it is reasonable to conclude that Lakulīśvara who lives during 2nd c. A.D. collected the practices prevailing among the Śaivites, organised them into the intelligible system of Pāśupatas and gave them a Sacred Text. The relationship between Lakulīśa and the Pāśupata system is similar to the one between Mahāvīra and Jainism. The Pāśupata system was influenced not only by Ājīvikism but also by Jainism as we see later.

Lakulīśa had four disciples. One of them was Karuṣa or Kālānana and he was the originator of the Kālāmukha sect. The rise of the sect may approximately be placed in the later half of the 3rd c.A.D. Both the Pāśupatas and Kālāmukhas entered Āndhradeśa about the same time. The Ellora Plates of Cālukya Viṣṇuvardhana (A.D. 718-752) mentions to Śivācāryas; Vāmaśiva and Puruṣaśiva, the disciples of Brahmaśivācārya of Terambi, which was the principal seat of the Pāśupatas.¹⁰ Evidently the two Śivācāryas were Pāśupatas and they decended into Andhra from Terambi.

The Tāḍikonḍa inscription of Ammarāja II (A.D.945-970) records the grant of three villages to god Umāmaheśvara in the temple of Samastabhuvanāśraya built by Vijayāditya II (A.D. 799-847).¹¹ The gift was placed in charge of Prabhūtarāśi, the pontiff of the Kālāmukha Śilāmaṭha at Vijayawada. According to the record Prabhūtarāśi was the tenth in lineage of Lakāśipu Pāśupati, the founder of the above Śilāmaṭha. Even on a moderate calculation, Lakāśipu should have founded the Maṭha at Vijayawada about A.D. 750. The record says that the Kālāmukhas had already established their Simhapariṣads at ancient (*purātana*) temples (*devāyatana*) like that of Amaravateśvara, identified with the present-day Amarāvati. By about the same time these two Śaivite sects appear in Karnataka is attested by the Paṭṭaḍakal inscription dated in A.D. 755,¹² and the Nandi Hill inscriptions of the years A.D.806 and 810.¹³ Though in Karnataka, the Kālāmukhas are known as Pāśupatas, the Malkāpuram and Tripurāntakam records mention them separately.¹⁴

The information about the doctrines and rituals of the Kālāmukhas is so meagre that it is not easy to get a clear picture of the system. The inscriptions say that

the *Lakulīśvara-Āgama* is the text of the Kālāmukhas as well. The Kālāmukha *ācāryas* at times take the suffix Paśupati.¹⁵ Rāmesvarapaṇḍita, the head of the Śilāmāṭha at Srisailam is described as 'the master of the nector that is the essence of *Lakulīśvara-Āgama*.¹⁶ Apparently therefore there was no difference between the Pāsúpata and Kālāmukha systems.

On the other hand, Rāmānujācārya, the founder of the Viśiṣṭādvaita system of Vaiṣṇavism attributed the following six practices to the Kālāmukhas¹⁷: (i) eating food in a skull, (ii) besmearing the body with ashes, (iii) eating ashes, (iv) holding a club, (v) keeping a pot of wine, and (vi) worshipping the God as seated therein. In fact these practices are among those of the Kāpālikas but not of Kālāmukhas. R.G. Bhandarkar accepts the view of Rāmānuja probably because statements like *kālāmukha-mahāvratī* occur in inscription and Kāpālikas are known as *mahāvratīs*. The Kāpālika *mahāvratā* consists of the *pañca-makāras*: (1) *madya*, (2) *māṃsa*, (3) *matsya*, (4) *mudra* and (5) *maithuna*. They even indulged in human sacrifice with the aim of attaining the *aṣṭa-siddhis* and finally the supreme bliss in the embrace of a woman as beautiful as goddess Pārvatī.¹⁹ Because of such gruesome and the abhorant practices, the Kāpālikas were detested by people and hence they could never become a force in social life. They always preferred inaccessible mountain and forest retreats. It may further be recalled that the Pāsúpatas condemned even 'bloody' Vedic rituals and detested people who practised Tantras. They are votaries of *ahiṃsā*. K.A.N. Sastri rightly doubts whether the Kālāmukhas who were associated with famous temples and conducted worship in them ever indulged in such anti-social practices.²⁰ According to the *Yogasūtra* of Patañjali, a *Mahāvrtī* was one who strictly adhered to *ahiṃsā*,

satya, asteya, brahmacarya, aparigraha which constitute *yama*.²¹ It is rather interesting to note that the five principles that constitute *yama* of the Kālāmukhas are the same as the *pañca-yamas* of Jains.

It may be added that even the Pāsūpata system was not altogether free from unsocial activities. The system is two - fold: (i) disciplinary and (ii) ritualistic. The former consists of *yama* and *niyama*. *Yama* consists of *ahimsā, śtṛya, bahmacarya, asaṃvṛyavahāra* and *asteya*²² whereas *niyama* is made up of *akrodha, guruśūśrūṣā, śauca, āhārālāghava* and *apramāda*. But their ritual which is made up of *upāhāra* and *dvāra* consists of several unsocial and meaningless practices verging on insanity. They are *krāṭhana* (snoring as if in sleep), *spandana* (shaking), *śṛṅgāraṇa* (making amorous gestures to ladies), *avitarkaraṇa* (thoughtless behaviour) and *avitābhāṣaṇa* (foolish speech). By such mad behaviour, the Pāsūpata tries to make himself disagreeable or even detestable, with a view to develop total detachment with the world so that the journey to the goal, *Śivasāyujya* would be cut short. Again this aspect of Pāsūpata ritual seems to have been influenced by Jainism. The *Ācārāṅgasūtra* says that "a mendicant living thus, is self-controlled towards the eternal. The matchless sage, who collects his alms is insulted with words by the people - despised by such-like people the wise man with undisturbed mind sustains their words and blows as a rock is not shaken by the wind."²³ It is therefore reasonable to assume that the Kālāmukhas avoided the unsocial ritualistic aspects of the *Lakulīśvara-Āgama* and scrupulously adhered to the discipline of *yama* and *niyama* recommended by it, as attested by inscriptions. K.K. Handiqui is therefore right in saying that "These Kālāmukha Pāsūpatas were not certainly identical with the Kālāmukhas mentioned by Yāmuna Muni and Rāmānuja in their enumeration of Śiva sects."²⁴ D.N. Lorenzen is more

outspoken when he remarks that "At the time of Yāmuna and Rāmānuja the Kālāmukhas were rapidly gaining popular or even royal support in South India. The two Vaiṣṇava priests may have purposely confused the two Śaivite sects in order to discredit their more important rivals".²⁵

The Kālāmukhas played a significant role in the socio-religious life in Andhra between the 9th and 12th centuries. They are found widespread from Vemulavāḍa in Karimnagar Dt.²⁶ to Mahādevimaṅgaḷam in Chittoor Dt.²⁷ and Hemavati in Anantapur Dt.²⁸ By their scholarship and piety which involved strict adherence to *mahāvṛata*, the Kālāmukha teachers could win the hearts of people. They became priests in temples. They chose the most ancient and frequented *kṣetras* such as Vemulavāḍa, Dākṣārāma, Amarāvati, Bejvāḍa, Cebrolu, Nadeṇḍla, Alampūr and Śrīśailam so that they could attract people and teach them their system. Śrīśailam appears to have become their principal centre where they received the patronage of Western Cālukayas - Someśwara I, Someśwara II and Someśwara III²⁹ and their feudotaries the Kākatīyas³⁰. The Kālāmukhas of both Andhra and Karnataka claimed to have belonged to the lineage of Apparpavatāvali.³¹

At most of their centres, the Kālāmukhas set up their *simhapariṣads* and *śaktipariṣads*. The former was popular in Andhra whereas the latter was predominant in Karnataka. The Vemulavāḍa inscriptions as well as an inscription from Maṭṭekote in Shimoga Dt., Karnataka³² speak of a line of teachers known as Bhujaṅgāvali. They appear to have descended from Bhujaṅgadevācārya of the *śaktipariṣad*, mentioned in a Bijapur inscription³³. The Vemulavāḍarecord makes it clear that in Andhra there were both *simha* and *śakti pariṣads*. These *pariṣads* might

have corresponded to the *anubhavamāṇḍapa* of the Vīraśaivites and the *vidyāmaṇḍapa* of the Goḷakīs.

The Kālāmukhas rendered signal social service by establishing *maṭhas* and maintaining *sattras* where the poor and the needy found ready help. In recognition of their scholarship and service, the rulers raised the Kālāmuka *ācāryas* to the exalted position of *rājaguru*. Rameśvara-panḍita of Mallikārjuna-śilāmaṭha was the *rājaguru* of a succession of Kākatīya kings - Betarāja, Duggarāja and Prolarāja.³⁴ Jagaddeva of Paramāra (?) family was a disciple of Brahmeśvara-panḍita of the *simhapaṇḍita* at Vemulavāḍa.³⁵ The Kālāmukha system appears to have galvanised even social mobility. The Kākatīyas who were originally Jains entered the fold of Brahmanism through Kālāmukha Śaivism and gradually rose in social status approaching that of Kṣatriyas.³⁶ The Kriyāśaktis, the *kulagurus* of the Saṅgamas of Vijayanagara were also Kālāmukhas.

More important is the service of the Kālāmukhas to the cause of learning and education. The Śaivites started the practice of giving *dīkṣā* to their followers. The Pāsupata *dīkṣā* is mentioned in the *Atharvaśiropaniṣat*.³⁷ The earliest epigraphical reference to *dīkṣā* comes from the Āmidelapāḍu record of Vikramāditya I (c. A.D. 650)³⁸, son and successor of Pulakesin II. The record says that Vikramāditya received *śivamaṇḍala-dīkṣā* from Sudarśanācārya and made a gift of a village to him. The Telugu poet Nannecoḍa of the 11th century refers to *dīkṣā*.³⁹ It seems *dīkṣā* among Śaivites corresponds to *upanayana* among the Brahmins, initiation into the practice of religious ritual as well as its doctrine. The *simhapaṇḍits* of the Kālāmukhas might have been the centres of religious discourses through which the initiated might

have been introduced to the texts, thus opening the flood-gates of religious knowledge before them.

Every Kālāmukha centre appears to have been a big seat of learning. Several inscriptions of the period record gifts for education (*vidyādāna*)⁴⁰, and for feeding students and their teachers. Inscriptional evidence speaks of a Brahmapuri at Alampūr⁴¹. Generally *brahmapuris* develop as appendices to *agrahāras* or *brahmadeyas*⁴² and it is defined as a group of Brahmin families, each specialising in a particular branch of learning - Tarka, Vyākaraṇa, Jyotiṣa, Mīmāṃsā, etc. Another inscription of Alampūr refers to a *ghaṭasāsi* (*ghaṭasāsi*)⁴³ which means the head of a *ghaṭikā*. It is therefore clear that the Brahmapuri of Alampūr was actually a *ghaṭikā*. At many other places like Chilkur⁴⁴, Kollipaka⁴⁵, Sanigaram⁴⁶ and Vemulavada⁴⁷ also the Kālāmukhas maintained schools. Of all the Kālāmukha seats of learning, Perūr appears to have been the biggest⁴⁸, run on the lines of Kōḍiya Maṭha in Karnataka.⁴⁹ In the Perūr Ghaṭikā, headed by a *ghaṭasāsi* there were 19 *upādhyāyas*, 7 *ṣaḍaṅgavids*, 2 *paṇḍits* and 1 astrologer. Perūr appears to have been managed by the *kriyāśakti-ācāryas*. The inscription further says that in the year A.D.1119, all the people of Perūr gathered and agreed to contribute one *hanna* (*herjunka*) for every child in the village to Kuppanabhaṭṭopādhyāya who was probably in charge of the management of the *ghaṭikā*. The inscription is a proof of the interest in education shown by the people of all sections in society. Inscriptions from Telangana mention several other *brahmapuris*.

In the ghaṭikās instruction was generally given in all the fourteen *vidyās* (*caturdaśa*), which included Vedas, Vedāṅgas, Mīmāṃsā, Nyāya, Dharmasāstra and Purāṇa. At times these *vidyās* included secular subjects like

Āyurveda, Dhanurveda, Arthaśāstra and Gāndharva. It appears that the schools of the Kālāmukhas admitted students of all castes and gave instruction in the subjects they chose. From about the 10th c. A.D., members of the fourth caste are found occupying high positions not only in the army but also at the court. Most of the officers at the court of the Durjayas of Velanāḍu were of the Sūdra caste including the Boyas.⁵² Even the Kākatiya court was dominated by the Velamas and Reḍḍis. The number of Brahmins that occupied high positions at Warangal throughout the period is very insignificant. On the other hand, the members of the fourth caste proved the mainstay of the administrative machinery and military system of the Kākatiya kingdom. It is but reasonable to assume that the Sūdras should have received training in state craft and military science in the educational institutions that sprang up all over Andhra.

Even creative scholarship was not limited to the upper castes. Someśvara III⁵³ and Rudradeva⁵⁴ were writers of great distinction. Baddena⁵⁵ a feudatory of the Kākatiyas was the author on polity and ethics. Jāyapa, the *gajasāhinī* of Gaṇapatideva, composed *Nṛttaratnāvalī* in Sanskrit. Poets appeared in the vernaculars and their number steadily increased. Nannecoḍa was the author of the *Kumārasambhavam* in Telugu and Buddhāreḍḍi composed *Raṅganātha-Rāmāyaṇamu* in *deśi* metre - *dvipada* - to mention a few. One interesting point about these two works is that they were almost independent works, not being translations of Sanskrit originals. A certain Bhīmaya Paṇḍaya claims to have composed in both *mārga* and *deśi* metres with great felicity. General literacy thus made progress because of the cosmopolitan spirit of the Kālāmukhas displayed through the network of *ghaṭikās*, *brahmapuris* and *simhapariśads*.

After the fall of the Later Calukyas, the Kālāmukhas gradually lost their influence. About the same time, the Kākatīyas rose to sovereign authority and showed preference to pro-Brahmanical systems. In Karnataka most of the Kālāmukha Maṭhas were taken over by the Vīraśaivas and under the liberal patronage of Gaṇapatideva, the Goḷakī Maṭha had spread its branches all over Andhra.⁵⁸

K.A.N. Sastri and N. Venkataramanayya⁵⁹ are of the view that the Kālāmukhas and Vīraśaivas were very powerful in the Deccan at the time of Turkish invasions from Delhi. They argue that the religious fervour the above religions could infuse, the people of Deccan could beat back the Muslims and regain freedom. But the views of the learned professors are not borne out by the actual situation in the land. None of the leaders of the 'freedom movement' was either a Vīraśaiva or a Kālāmukha. The *kriyāśaktis* were no doubt became the *kulagurus* of the Saṅgamas but the role of the former in founding Vijayanagara is not known. Most of the leaders of the times favoured less militant and more compromising pro-Brahmanical systems of *Smārta* or *Ārādhya* or *Goḷakī*.⁶⁰

These changes seem to represent different stages in their political career.

MATTER AS A FORM OF CONSCIOUSNESS

Matter is generally regarded as diametrically opposed to consciousness. In India also this idea is found to exist in a few systems of thought. In some schools of Indian philosophy, on the other hand, matter is regarded as an evolute of energy, and in some others, as an evolute of consciousness. For the convenience of our discussion, let us have a bird's eye view of the Indian theories of matter, which may broadly be brought under seven classes as follows:

1. According to the Cārvākas, matter alone is the ultimate reality forming the foundation of all the objects of the world. The world is composed of four kinds of gross material elements, namely, earth, water, fire and air.¹ All the non-living or material objects and the living organisms like plants and animal bodies are nothing but different collocations of these four kinds of elements. Even consciousness found in the living beings is regarded by these thinkers as a by-product of matter and as a quality of the body.²

2. (a) According to the Jainas, matter or *pudgala* is an unconscious but ever-active reality. All the non-living

things and the animal bodies are formed of *aṇus*, the smallest and indivisible particles of *pudgala* which are quite distinct from the *jīva*, the conscious principle.³ There are some thinkers among the Jainas, who hold that every particle of the so-called matter is conscious.⁴ This does not, however, mean that matter is essentially of the nature of consciousness; it only means that material particles are endowed with consciousness. The difference between matter and consciousness is, therefore, not denied by these thinkers also.

(b) According to the Nyāya-Vaiśeṣikas, matter is completely devoid of consciousness and is quite distinct from the conscious principles God and the individual selves. Four kinds of *paramāṇus*, the minutest particles of matter, namely, earth, water, fire and air are said to form the vast material world by their mutual conjunction. In dissolution, they are separated from one another and exist in eternal space and time.⁵ These particles, being the ultimate realities of the material world, do not merge into any higher reality. It is, however, held that these material elements cannot work by themselves; they work only because God activates and regulates them in accordance with the *adr̥ṣṭas* of the *jīvas*.⁶ The Mīmāṃsakas also hold that the material world is composed of *paramāṇus* or the minutest particles of earth, water, fire and air, which are non-conscious in nature and are distinct from the conscious self.⁷

3. The Sāṃkhya-Yoga system derives all the reals except *puruṣa* or the self from *prakṛti* - an eternal, all-pervading, non-conscious and eternally active principle. In this view, *paramāṇus* or atoms are not the ultimate realities of the gross world, since they are produced from *prakṛti* only at a later stage of evolution.⁸ *Prakṛti*,

the ultimate stuff of the material world, being non-conscious, is quite distinct from the *puruṣa* which is conscious.⁹ But yet *prakṛti* is related to the *puruṣas* in such a way that each step of its evolution is in exact harmony with the acts of the *puruṣas*.¹⁰ Vijñāna Bhikṣu, however, holds that the harmony between the *puruṣa* and *prakṛti* is maintained by Īśvara. The Mādhva Vaiṣṇavas and the Pāśupata Śaivas also derive the material world from *prakṛti* accepted as a non-conscious reality quite distinct from both the knowing self and Brahman which are of the nature of consciousness. *Prakṛti* accepted in these systems, however, acts under the full control of Īśvara,¹¹ as held in the philosophy of Bhikṣu.

4. The Vaibhāṣikas and the Sautrāntikas have erected a materialistic system of their own, in which atoms have been regarded as the ultimate elements of the material world.¹² The atoms accepted here are, however, not eternal but subject to incessant change. That means, the world is here regarded as an aggregate of innumerable non-eternal or everchanging atoms. Further, according to these thinkers, reality is nothing over and above the bare fact of 'efficiency' which is but another name of energy. Efficiency or energy is the reality; the thing that is revealed to us is a construction of our thought. What we call fire is simply caloric energy; its shape, extension, etc. are our imaginations.¹³

5. Among the Vaiṣṇava Vedāntins, the Nimbārkiśts hold that matter is an evolute of *prakṛti* which, on its part, is an attribute or potency of Brahman and is, for that reason, non-different from Brahman. Accordingly, matter is also non-different from Brahman,¹⁴ the former being simply a lower form or manifestation of the power of the latter. The Rāmānujists regard matter as the *prakāra* or attribute,

aṁśā or part, and *śarīra* or body of Brahman. Matter in their view is inseparably related to Brahman both in the causal state and the effect state i.e. both in dissolution and in creation.¹⁵ According to the Caitanyites, the material world is created out of the real and eternal power of Brahman called *bahiraṅga-śakti* or *māyā-śakti* which is insentient in nature.¹⁶ This power resides in the being of Brahman and is neither different from nor identical with it. To the Vallabhites, it is Brahman of the nature of *sac-cid-ānanda* or existence-knowledge-bliss that takes the form of matter. In matter, however, only the aspect of *sat* or existence is manifested, while the aspects of *cit* or knowledge and *ānanda* or bliss are concealed. Matter being thus a manifestation of *sat*, an essential aspect of Brahman. Brahman is said to be existing in its fullness in all the objects of the world.¹⁷ Accordingly, what we call matter is, in reality, not matter; it is nothing but Brahman with some of its aspects concealed. A proper analysis of Vallabha's theory, however, shows that the world is a modification not of Brahman as it is, but of its non-conscious power. For it is said that from the *sat*-aspect of Brahman arises *prakṛti* which is subsequently transformed into the world. According to Bhāskara also, the world is a modification of Brahman or, strictly speaking, of the 'enjoyable' or non-conscious power of Brahman: it is the non-conscious power of Brahman that transforms itself into the material world by assuming some conditions or limitations.¹⁸ Thus, according to these views, matter is a form of the non-conscious power of Brahman.

6. Among the Śaivites, the Śaiva-Siddhāntins hold that matter is a modification of Śiva's unconscious power called *māyā*.¹⁹ Śrīkaṇṭha, the Pratyabhijñā-Śaivites and the Vīra-Śaivites hold that it is Brahman or Śiva that has assumed the form of the material world with the help of

his non-conscious power *māyā*. In the view of all these thinkers, however, *māyā* is simply a lower phase of the conscious power of Brahman or Śiva, which, on its part, is identical with Brahman or Śiva. In the ultimate analysis, therefore, matter has its origin in Brahman of the nature of consciousness and, hence, is identical with Brahman and is of the nature of consciousness.²⁰ According to Śāktism also, matter is merely a modification of *prakṛti*, which on its part is a modification of Śakti or the Divine Mother of the nature of existence, knowledge and bliss.²¹ Accordingly, what we call matter is, in reality, of the nature of consciousness.

7. The Advaita-Vedāntins hold that the material world has no ultimate reality; it is merely an appearance consisting only of names and forms created by *ajñāna* or nescience and super-imposed on Brahman, the Absolute. To one who has acquired the knowledge of Brahman, the world does not exist, since at that plane, only the non-dual Brahman is found to shine forth everywhere.²² This means that though the world we perceive is false, in essence it is identical with Brahman of the nature of consciousness. Among the Buddhists, the Yogācāras totally deny the reality of the material world. In their view, *viññāna* or consciousness is the only reality, which manifests itself as matter because of the ignorance of the perceiver.²³ Some of these thinkers say that this world is a creation of our individual *viññānas*, while others hold that it is an objective manifestation of the Absolute *viññāna*, the individual *viññānas* being the subjective manifestations of the same.²⁴ The Mādhyamikas also totally deny the reality of the material world and hold that what we call matter is only an imagination caused by ignorance. Nāgārjuna denies the transcendental reality of the world and establishes the existence of Nīrvāṇa everywhere. He says

that the world we perceive is a creation of ignorance, while, in reality, there is not the least difference between the world and Nirvāṇa.²⁵

Now, the view of the Cārvākas that non-conscious matter is the only reality and that consciousness is a byproduct of matter is totally untenable. Granting that consciousness comes out of matter, we may ask: how could consciousness come out of matter if the former were not there in some form or other in the latter? Nothing can come from the vacuum. The contention that at a certain stage of evolution consciousness is produced from matter presupposes that consciousness exists in the causal stuff or matter in an unmanifested form. It is argued that just as the red colour - a completely new element - is produced when betel-nut, betel-leaf, lime, etc. are chewed together, so consciousness is produced from the admixture of material element. But the red colour cannot be regarded as a completely new element; it must be said to be existing in the said elements in some form or other. If not, why does not a blue colour come out of those elements? In a like manner, if consciousness is said to be coming out of matter, it must be accepted that the former exists in the latter in an unmanifested form. Further, if consciousness be an evolved stage of matter, can we not regard matter as an involved stage of consciousness? That a seed evolves into a tree means that the tree is involved in the seed. Likewise, if matter evolves into consciousness, the latter must be said to be involved into the former. In the words of Sri Aurobindo, "For there seems to be no reason why life should evolve out of material elements or Mind out of living form, unless we accept the Vedāntic solution that life is already involved in matter and mind in life because in essence Matter is a form of veiled life, life a form of veiled consciousness".²⁶

The view of the Jainas that the material world works by itself without the guidance of any conscious principle is untenable, as it is not possible for the non-conscious matter to maintain the strict order and harmony of nature, without the guidance of some conscious principle. The view of the Naiyāyikas that matter is controlled and regulated by Īśvara, a quite distinct principle, is also unacceptable. For there is no reason why matter, a distinct reality, should act in concert with the will of Īśvara. If matter is to act in accordance with the will of Īśvara, it will have to be accepted that matter and Īśvara are synthesised at a higher plane of existence.

Though in Sāṃkhya-Yoga *prakṛti* is said to be material or non-conscious in nature, it is not matter in the sense of the materialists and the Naiyāyikas. Atoms or the ultimate particles forming the five kinds of great material elements or *mahābhūtas* are produced, according to Sāṃkhya-Yoga, from *prakṛti* at a much later stage of its evolution. This means that *prakṛti* is much finer than gross matter and the material atoms. And a proper analysis of the concept of *prakṛti* will reveal that it is nothing but energy, its three *guṇas* of *sattva*, *rajas* and *tamas* being but three ways of the functioning energy: *sattva* is the power of illumination; *rajas* is the power of activation; and *tamas* is the power of rendering things passive. Though *prakṛti* is, thus, in essence energy, it is called *jada* only in the sense that it is non-conscious.

Now, though non-conscious, *prakṛti* is said to be working in full concert with the acts and needs of the *puruṣas* or the conscious selves, as a result of which the selves get the proper fruits of their own actions in the form of enjoyment and liberation. But the problem is: if *prakṛti* and the *puruṣas* are quite distinct from each other,

why should the former be so loyal to the latter and work to serve their interests? Again, how can the non-conscious *prakṛti* adjust itself to the needs of the *puruṣas*? If *prakṛti* and the *puruṣas* be completely distinct from each other, both will try to maintain their identity, and there will be no possibility of one's being subservient to the other. If, therefore, we are to account for the harmony between *prakṛti* and the *puruṣas*, we shall have to maintain that these two are synthesised at a higher plane of reality.

The view of Vijñāna Bhikṣu that both the *puruṣa* and *prakṛti* are controlled and harmonised by God does not improve the position at all. For here also the same problem arises; if the non-conscious *prakṛti* be quite distinct in nature from God, the Consciousness, why should the former act according to the will of the latter? Hence, if we are to account for the servitude of *prakṛti* to the will of God, we must hold that at a higher plane of existence, *prakṛti* is not different from the being of God.

The view of the Vaibhāṣikas and Sautrāntikas that material objects are but collocations of ever-changing atoms and that they are nothing but forms of energy comes very close to the theory of Sāṃkhya-Yoga and suffers from the defects of the latter. That is to say, in the absence of some guiding conscious principle, these atoms or units of energy cannot work by themselves and bring forth the harmonious multiple world of our experience. The view of the Vaiṣṇava-Vedāntins that *prakṛti*, the source of the material world, is a quality or potency of Īśvara and that it is in a relation of difference-cum-non-difference with him cannot satisfy us. If a quality or potency is to work in concert with the will of Īśvara, the Consciousness, it must be non-different from his at a higher

plane of reality. In our view, a quality or potency is an outer manifestation of the substance, while at bottom these two are identical.²⁷ And if the non-conscious quality is to be identical with Brahman of the nature of consciousness, then it will have to transcend its non-sentiency. That means, the non-conscious energy or *prakṛti* must first reveal itself as conscious energy and then it will have to dissolve itself into the bosom of the Consciousness.

Here comes the Śaiva-Sāṅkya philosophy which clearly says that the non-conscious power of *prakṛti* or *māyā* is but a phase of Sakti or conscious energy which on its part is identical with the Consciousness - Śiva or Brahman. This is the culmination of the Indian thought on the origin of matter. All the other theories mentioned above are but different stages in the series of evolution propagated in the Śaiva-Sāṅkya philosophy.

We may thus summarise that what we call matter is an evolute or *prakṛti* or non-conscious energy; what we call non-conscious energy is but a phase of the conscious energy; what we call conscious energy is but a quality or potency of Brahman, the Consciousness; and what we call the quality or potency of Brahman is identical with Brahman. This means that matter is at bottom identical with Brahman or the Consciousness. What we mean to say is that in the process of evolution, the ultimate or universal consciousness reveals itself as the conscious energy; the conscious energy reappears as the non-conscious energy; the non-conscious energy transforms itself into the material atoms at a lower stage of evolution; and the material atoms in their turn evolve into the material bodies at a still lower stage of evolution. Accordingly the non-conscious energy and matter are nothing but lower levels of consciousness: they are also

conscious, though consciousness in them is not manifest.

In this connection, a question may be raised: why should matter be regarded as devoid of consciousness? It is seen that material bodies and atoms work in a particular and well-regulated way; fire always burns, a hard body resists, a heavy thing falls down, an elastic thing is subject to contraction and expansion, and so on. The regularity of the action or behaviour of atoms is well known to modern science. Here our problem is: why do the material bodies and atoms behave in such a regular way? The materialists try to solve the problem by holding that these material things are endowed with certain definite qualities and capabilities. But the point is: if matter were totally blind or non-conscious, how could it follow a particular course of life and react when some opposite force stands in the way of its functioning? Some are of the opinion that the world has a teleology or purpose behind it, i.e., all its acts are directed towards some end. But this position will not solve the problem in question, since teleology or purpose presupposes the working of some consciousness from behind, though the consciousness might not be clearly manifested. The body of a person falling senseless may move, act and react, but the person is not aware of these actions, as it is proved by the fact that he does not remember them when he comes to the senses. But it must be accepted that the senseless body acts, because it is informed by the consciousness, though that consciousness is not fully manifest. In the same way, it may be said that the so called material bodies act in a well-calculated way, as they are informed by the consciousness, though the consciousness in them is not manifest.

By 'consciousness', however, we mean not the 'thinking process' which is a developed stage of the consciousness, but 'the tendency to work in a regular way'. Consciousness has different levels, of which that manifested in the so-called material objects is the lowest one. In these material bodies, the consciousness simply 'exists' and acts mechanically; it is devoid of the process of thinking. From matter arises life through the process of evolution. At a higher level of life, mind develops, and in a still higher level of life the capability of thinking arises. In the human stage, this thinking process develops to such an extent that it tries to transcend the limitations imposed by the mind-body. Accordingly, a conflict arises between the physical elements and the thinking being: the physical elements try to work mechanically, while the thinking being tries to control them according to its sweet will. And ultimately man succeeds to transcend the limitations of the mind-body and rises to the level of realisation where the self functions by itself.

M.C. CHOUDHURY

MANUSCRIPTS AND MANUSCRIPTOLOGY IN RELATION TO INDIAN HISTORY

Manuscripts are, unquestionably, invaluable sources for the reconstruction of the history and culture of any land. Etymologically, the word *manuscript* is derived from the Latin word *manus*, meaning 'hand' and *scriptum*, meaning 'thing written'.¹ According to the *Oxford Dictionary*, Old English has a verb *manuscribe* to denote 'writing with one's (own) hand as opposed to printing'.²

Manuscriptology is evidently the science of manuscripts, the suffix *-logy* being derived from the Greek *logos*, meaning 'science', 'doctrine' or 'theory'.³ But manuscriptology is not only a science, it is also an art as will be presently explained. In fact, it is a comprehensive term and includes everything related to a systematic scientific study of manuscripts, e.g., their collection, collation, critical and comparative editing by going through the variant readings (*pāṭhāntara/pāṭhabheda*), subjectwise classification, conservation and chemical treatment, purging off of the interpolations, rectification of errors (grammatical, metrical, etc.), tracing the missing portions or changes caused intentionally or inadvertently,

deciphering the alphabets properly, understanding and explaining the abbreviations and symbols used therein, ascertaining the purpose of writing (whether for presentation to, or patronage of, kings and the like; or for the continuance of knowledge), establishing the chronology or date of composition of the original work and of the copyist (by means of evolution of alphabets, linguistic developments, literary style and quotations from the earlier or contemporary authors cited in the text concerned), and many other minor accessory works for a judicious utilisation of the same. The task is stupendous and exceedingly painstaking, but immensely useful for unravelling the multifarious aspects of any culture or civilisation, as literature is axiomatically known as the mirror of society.

Now, the various sources for the reconstruction of India's past are broadly divided into two conventional categories, viz. literary and archaeological. Manuscripts, strangely enough, form a sort of link between the two, being semi-literary and semi-archaeological in nature. Of course, under literary sources are considered those indigenous and foreign texts (related to India) that are preserved in the form of the vast *Veda-Brāhmaṇa* literature, the Epics and the *Purāṇas*; the *Smṛtis* and the *Arthasāstra*; the secular and religious texts like Bhāsa's or Kālidāsa's dramas or the *Tantras*; the Greek accounts of Herodotos, Megasthenes and others; the Chinese and Tibetan accounts of Fahien, Hiuen Tsang, I-Tsing, Dharmasvāmin, Tārānatha, etc.; the technical literature like Bharata's *Nāṭyaśāstra*, the *Sūśruta-saṃhitā*, *Aśvāyurveda* or the *Bṛhat-saṃhitā*; the purely historical literature such as *Harṣacarita* and the *Rājataranṅinī*, as well as the Pali and Prakṛita texts like the Cylonese *Dīpavaṃśā* and the

Mahāvamśa or the Buddhist *Nikāyas* and the *Avadāna* literature; as also the Arabic and Persian chronicles like Sulaiman's *Silsilāt-ut-Tawārikh*, Al-Masudi's *Muruj-ul-Zahab*, Al-Bilāduri's *Futuh-ul-Buldān*, Al-Bīrūnī's *Tārikh-ul-Hind*, and hundreds of other similar texts pertaining to political, religio-philosophical and technical literature. It should be borne in mind that all these works had been extant in the form of MSS in India and have gradually seen the light of day only after the assiduous labour of scholars to discover them and print their critical editions in order to understand our glorious achievements in the past as well as our failures and shortcomings in a correct perspective, as 'history' has many lessons to teach us, and is "an unending dialogue between the present and the past".⁴ And it is here that manuscriptology assumes its supreme importance.

But manuscriptology, technically speaking, is really a branch of palaeography which comes under archaeological sources, and is a science concerned with all sorts of ancient writings - deciphered or as yet undecipherable. Palaeography, in its widest sense, may be described as a study and analysis of ancient writing "with the primary objects of deciphering and reading the writings themselves and of distinguishing and describing the various styles, their relation to one another and the general principles of development. Closely connected with these is its secondary object of providing criteria of the date and authenticity of manuscripts, whether literary works (in the ancient world always and in the mediaeval world often these were undated) or documents such as edicts, bulls, characters, letters, etc."⁵

Thus palaeography has within its purview writings on materials of all conceivable kinds. But in its restricted

sense, it "denotes only the study of writing or such destructible materials as papyrus, wax, parchment and vellum, and paper."⁶ A related science, epigraphy, is confined to the study of inscriptions, ostraca (i.e., potsherds or clay tiles or tablets) or metal - in other words, on what could normally be considered as imperishable materials.

The art of penmanship and calligraphy in ancient and mediaeval times reached a very high standard and gave rise to special classes of people like *lekhakas*, *kāyasthas*, *pāthakas*, etc., who copied thousands of MSS. These have been classified by scholars as *majuscule* (those written in large letters) or *minuscule* (those in small letters), written by hand with quill pens, stylus (*śalāka*), or the like, the ink used being "soot, lampblack, burnt ivory, pulverized charcoal, etc."⁷ The earliest known dates of such writings go back to the 4th millennium B.C. in Sumeria and Mesopotamia.

Thus MSS are documents containing matter transcribed by hand with a brush, pen, etc., on some perishable material such as leather, waxed tablets, wooden planks, birch-bark or palm-leaves, cotton or silken cloth, etc. Some have come down to us in the form of a "roll (*volumen*) or in a book form (*codex*). They may be either autograph, in the handwriting of the author, or apograph, as transcript by a scribe."⁸

There is also another very important class of MSS. called illuminated MSS. wherein, as David M. Robb says, "a text is embellished or decorated with designs executed in colours, gold and occasionally silver that may take the form of elaborated initials, illustrations pertinent to the subject-matter of the text, or may even be simply an opulent writing in gold or silver on tinted pages of parchment". He further explains that illumination "causes the volume

so treated to be resplendent, suggesting its value as a means of recording and communicating ideas". When the spiritual texts were "believed implicitly as divinely inspired, no means could be spared to indicate their supernatural character"⁹ An illuminated MS. is indeed the largest single body of early mediaeval and mediaeval painting in India.

Although the oldest of such MSS. could be traced as far back as the second millennium B.C. (the illustrated *Book of the Dead* in the dynastic Egypt)¹⁰ the earliest specimens in India are found from the Eastern zone, ranging approximately from the beginning of the eleventh century to the end of the twelfth - in other words, the Pala-culture period- whereafter the tradition seems to have travelled over to W. India where we come across illuminated palm-leaf MSS. from A.D. 1100 to 1350, which were subsequently replaced by paper-books. Under the patronage of the Pala kings of Bengal and Bihar like Mahāpāla, Rāmapāla, Nayapāla, Govindapāla, etc., or under the Varman kings like Harivarman, we find dozens of illustrated MSS. of Mahāyāna Buddhist texts like the *Aṣṭasāhasrikā* - *Prajñāpāramitā*, *Pañcarakṣā*, *Kāraṇḍavyūha*, etc., all duly dated in the regnal years of the reigning kings (*viṣaya* - *rājya* - *saṃvatsara*) or even after their reigns (*atīta-rājya* or *vigata-rājya*)¹¹

The MSS paintings, iconographically, are related to the Vajrayāna - Tantrayāna pantheon and various gods and goddesses, such as Tārā, Lokanātha, Mahākāla, Amitābha, Akṣobhya, Maitreya, Vajrapāṇi, etc., are represented in accordance with their *dhyānas* in the *sādhana-mālā* texts, sometimes depicting the full *maṇḍala* of the main divinities, in more than half a dozen bright colours like "orpiment, yellow, white, indigo-blue, Indian ink-black, cinnabar red and green."¹² N.R. Ray has shown

that "these miniatures do not represent a separate style of book-illustration; they are in fact mural paintings in reduced dimension."¹³

Again, the Islamic MSS of the *Qur'ān* and other texts in Arabic and Persian, available in India from the fourteenth century onwards, are known for their exquisite beauty both from the pictorial and calligraphic points of view, but with the vital difference that although they were richly embellished, they were never illustrated by figures of men or animals, as the idea goes against the fundamental tenets of Islam. Historically speaking, all such illuminated MSS., also known as miniature paintings, are very important for the study of any contemporary art-traditions and iconography showing mainly the prevalent religious beliefs and practices, as the dictum 'art for art's sake' was (with the exception of terracottas and the like) never followed in India. Moreover, while the ordinary MSS have mostly been soiled, damaged or destroyed by the damp, warm tropical climate and various parasitic infections (not to talk of Islamic vandalism), the illuminated ones are the best preserved, because of the great care bestowed on them, their minimum exposure to light, and relatively limited use.¹⁴

In order to make a really meaningful appreciation of the merit and authenticity of a manuscript, proficiency in many other branches of learning is essential, such as the knowledge of the relevant alphabets (*Tamīla-lipi*, *Grantha-lipi*, *Śāradā-lipi*, *Kuṭila-lipi*, etc.); and an adequate knowledge of the concerned language and its linguistics because of the lack of punctuation in the ancient and mediaeval MSS and their continuous pattern of writing with a uniform gap in between each alphabet (from which the correct formation of the word intended is

frequently very difficult, hence often tentative). One should also have a mastery over the subject-matter to be handled (which may be anything from *Kāvya-Vyākaraṇa* to *Āyurveda-Jyotiṣa*, or *Dharmaśāstra-Arthaśāstra* to *Gandharvaveda-Mānasāra-Rūpamaṇḍana*, or *Kṣatравид्या* to *Brahmavidyā*), besides a thorough grasp of research methodology, historiography and textual criticism.

The search for MSS. again could be at personal, institutional or national levels. In the first category could be placed those that were collected by Rajendralal Mitra, Haraprasad Sastri, Colonel Tod, Rahul Sankrityayana, Raghu Vira, Bendall, Aurel Stein, Grierson, R.G. Bhandarkar, T. Ganapati Sastri, Barthwal, Elliot and Dowson, and a host of other brilliant and dedicated scholars. In the second category are those preserved, for example, in the K.P. Jayaswal Research Institute, Patna; V.V.R.I., Hoshiarpur; Kasi Nagari Pracharini Sabha; Sarasvati Bhavana Library, Varanasi; B.O.R.I., Poona; the Vangiya Sahitya Parishad, Calcutta; the Adyar Library, Madras; Raza Library, Rampur; Khuda Bakhsh Library, Patna; Raghuvir Singh Library, Sitamau; the different university libraries; the libraries of Rajasthan and Gujarat like those at Undaipur, Jaipur, Ajmer, Alwar, Tonk, etc.; the Asiatic Society Library at Calcutta; besides the various state, provincial or university museums, e.g., the Indian Museum, Calcutta; the Bharata Kala Bhavana, B.H.U.; the Prince of Wales Museum, Bombay; the Salar Jang Museum, Hyderabad; the museums at Lucknow and Chandigarh and many others of their kind. The last, but not the least, are our national attempts in this direction by the establishment of the National Museum, Delhi and our National Archives. As Bordin and Warner have said, "One of the most important types of manuscript repository is the official archive which preserves the records of federal,

state or local government bodies." These paper MSS undoubtedly will have increasing importance in the course of time.

So far as editing the MSS is concerned, laudable attempts have been made by ingenious talents like Edgerton at the reconstruction of the *Pāñcatantra*, by Sukthankar to prepare a critical edition of the *Mahābhārata*, by Ludwig Sternbach in regard to Kauṭilya's *Arthaśāstra*, etc. But many times more than what little has been achieved in this direction still await the attention of scholars for escaping oblivion. Descriptive catalogues or critical bibliographical survey of extant MSS for the reconstruction of the ancient, mediaeval and Mughal periods are remarkable attempts in themselves, but are not being followed up, to the desired extent. Even the *New Catalogus Catalogorum* (in imitation of Theodore Aufrecht's original work), under the able editorship of V. Raghavan and K. Kunjunni Raja seems to be slackening. In order to give a fillip to such important branches of study, therefore, it requires a dedicated team of researchers so that they could gear up their energies for exploring our past in the most satisfactory manner. There is no doubt that great care was always taken by the scribe while copying manuscripts, putting in days or even months of hard labour on it. This is clear from many such appeals found in them as:

*bhagna-prṣṭha-kaṭi-grīvaḥ stabdha-dṛṣṭir adhomukhaḥ /
kaṣṭena likhitaṃ granthaṃ yatnena paripālayet /*

with a request to protect them from oil, water or the undeserving (*mūrkhahaste na dātavyam*, etc.).¹⁵

MSS. are supremely important for historians as with linguists and litterateurs. Thousands of MSS. await the attention of scholars in Indian and foreign libraries

and museums. They form the basic source-material for the study of different periods of Indian history. An amalgam of epigraphy and literature, as the MSS are, they undoubtedly present a great difficulty to scholars trying to handle them, but the labour is more than amply rewarded. Scholars working in diverse fields of Indian history are, more often than not, faced with the frightening task of going through the MSS. pertaining to their individual topic. As said above, to make a real use of them, a knowledge of the alphabet as well as an understanding of the language is a pre-requisite condition. As for ancient India, MSS. are mostly written in Sanskrit, or else in Prakrit and Pali languages. Similarly, for the Sultanate and the Mughal periods, a grasp of the Semitic alphabets (the Arabic, Persian and Urdu characters) and a knowledge of the relevant language are indispensable for original work at grass-roots level. In fact, this period seems to present the toughest obstacles to scholars. It is unfortunate that mediaevalists, particularly Hindu scholars who outnumber all others, still largely depend on Elliot and Dowson's work entitled *The History of India as Told by its Own Historians* in several volumes. It is a pioneering work and undoubtedly monumental, but hopelessly incomplete and inadequate. Apart from the difficulty in learning a Semitic script, the Hindus of late, have developed a sort of aversion to the study of these languages as they were spoken and written by outlandish people.

The first serious attempt to recover the Islamic MSS started with the founding of Royal Asiatic Society of Bengal by William Jones, and thereafter certain other autonomous bodies and individual publishers in Lucknow, Azamgarh, Rampur, Deoband, Delhi, etc., but till now only

a few MSS have been edited and printed, with or without English translations, like Minhājuddīn's *Tabaqāt-i-Nāṣirī* (Raverty), Ziyāuddīn Baranī's *Tārīkh-i-Firūz Shāhī* (Rizvi), *Bābar-Nāmah* (Beveridge), Gulbadan Begam's *Humāyūn-Nāmah* (Beveridge), 'Abul Fazal 'Allāmī's *'Ain-i-Akbarī* (Blochmann and Jarret) and *Akbar-Nāmah* (Beveridge); Nizāmuddīn Ahmad's *Tabaqāt-i-Akbarī* (B.De & Baini Prasad), 'Abdul Qadir Badāūnī's *Muntākhah-ut Tawārīkh* (Ranking, Lowe and Haig), Muhammad Qāsim Firishta's *Tārīkh-i-Firishta* (Briggs), *Tuzuk-i-Jahāngīrī* (Rogers), Abdul Hamid Lāhaurī's *Pādshāh-Nāmah* (Bibl. Ind.) Muhammad Sālih Kambū's *Amal-i-Sālih* (Yazdani), Mirzā Nāthan's *Bahāristān-i-Ghaibi* (Borah), Md. Hashim Khāfi Khān's *Muntakhab-ul-Lubab* (Sayeed), *Ma'āsir-i-'Ālamgīrī* (Sarkar), Mirza Md. Kazim's *'Ālamgīr-Nāmah* (Hai), Shāh Nawāz Khān's *Ma'āsir-al-Umarā* (Beveridge and Baini Prashad), Ghulām Husain Salīm's *Riyāz-us-Salātīn* (A. Salam), etc., etc.

But these are a few bucketfuls of water from the oceanic mass of MSS. available in India and abroad, e.g., in the Cambridge University Library (Browne, Bendall); Munich Library, W. Germany; Berlin Library; Bibliotheque Nationale, Paris; India Office Library, London; British Museum Library, London; Bodleian Library (Sachau and Éthé), Oxford; Bibliothek zu St. Petersburg, Russia; Eton College Library, Oxford; Lewis Collection, Philadelphia; John Rylands Library, Manchester; Oriental Academy, Vienna; Leyden Library (*Catalogus Codicum Orientalium Bibliothecae*, etc., 6 vols., Leyden, 1851-77); Library of Ministry of Education, Tehran; Bibliothèque du Madjless, Tehran; Lahore Public Library, Lahore; MSS in the collection of the school of Oriental and African Studies, London; Arabic and Persian Collection in the R.A.S. of Gr. Britain and Ireland (Morley); Islamiyah College Library,

Peshawar, the Princeton University Library and many others. Besides, we have a stupendous load of *Akhhbārāt*, i.e., News Letters or Court Bulletins. For the period of Aurangzeb alone, "we possess the *Akhhbārāt* for the regnal years 20, 24, 25, 28, 31, 32, 33, 36, 40 and 43 to 51, some 5772 pages in Sir Jadu Nath Sarkar's transcripts" (S.R. Sharma, *A Bibliography of Mughal India*, p.11). Added to these is the bulk of MSS. in Peshwa's Daftars (both Persian and Marāṭhī) and the Jaipur, Jodhpur and Kota Records. The Jaipur Record Office for instance, has already catalogued and indexed more than "307 letters from the emperors and princes, 9298 letters to the Mahārājas, more than 10,000 miscellaneous letters, and memoranda and 340 drafts of letters" (Sharma, p.23), all dated between 1606 and 1717, thus covering more than a century. This is indeed awe-inspiring and persistent efforts by teams of scholars for decades can only do something. An idea of the staggering number of MSS. must be more than a million can be had from the various catalogues of the collections, only some of which are mentioned above. C.A. Storey's monumental work on *Persian Literature - a Bibliographical Survey*, D.N. Marshall's *Mughals in India (A Bibliographical Survey of the MSS. of the Mughal Period)*, S.R. Sharma's *Bibliography of Mughal India; the Index Islamicus and the Encyclopaedia of Islam* - to name only a few - will show the immensity of the buried treasure that lies unutilised for historical research even today.

In fine, it cannot be gainsaid that all these manuscripts, briefly referred to above, are worth their weight in gold and are invaluable national assets which, if properly ransacked, would yield a panoramic picture of the political and cultural history of India and her developments through the ages.

కోరాడ రామకృష్ణయ్య

వ్యక్తి - విశ్వరూపము - ఆత్మ పరిజ్ఞానము

ప్రముఖ భాషాశాస్త్ర వేత్త విద్వద్విమర్శకులు, సహృదయులు కీ. శే. రామకృష్ణయ్యగారు 1950 నుండి 1956 వరకు ఈ ప్రాచ్యపరిశోధన సంస్థలో పనిచేశారు. ఆ సమయంలో ఈ పరిశోధన సంస్థలో అముద్రిత గ్రంథపరిష్కరణ, పరిశోధక వ్యాసరచనల ద్వారా, ప్రాచ్యకళాశాలలో బోధన ద్వారాను వారు కావించిన భాషాసారస్వత సేవ మార్గదర్శకమైనది, అమూల్యమైనది. శ్రీ రామకృష్ణయ్యగారి శతజయంత్యుత్సవాలను పురస్కరించుకొని వారి అముద్రిత రచనలలో ఒకటైన ఈ వ్యాసాన్ని శతజయంతిస్మారికగా ఇందులో ప్రచురిస్తున్నాము.

-సంపాదకుడు

నేను, నాది, అహం, ఆత్మీయం అనే భావాలు మానవజన్మమెత్తిన ప్రతివ్యక్తికి సహజముగనే కలుగుతూ ఉంటాయి. ఈ లోకంలో వ్యక్తిత్వమనేదికూడా ఈ 'నేను' అనే భావము మూలముగానే ఏర్పడుచున్నది. ఈ వ్యక్తి 'నేను' అయినపుడు నాకంటే భిన్నమైనదిగా కనబడుచున్న ఈ లోకము, అందలి వస్తువులు నాకొరకే ఏర్పడినవని, నావి అవి తలంచుటలో ఆశ్చర్యమేమున్నది? అయితే ఈ 'వ్యక్తి' కూడా ఆ విశ్వములోనివాడే. అయినను తాను విశ్వము కంటే భిన్నుడనని, విశ్వమంతా ఆత్మీయమని తలంచుట మానవున కొక్కనికే సహజమైయున్నది. కారణము మానవుడను పేరు ఎవరు పెట్టినారో ఆ పేరు ఆమానవ శబ్దములోనే ఇమిడియున్నది.

మానవుడు మనసశీలుడు, వివేకవంతుడు, విచారణపరుడు, కావుననే 'నేనెవరు? ఈ బాహ్యవస్తువు-ఈ లోకము-ఈ విశ్వమంతా ఏమిటి? ఇది నాకొకటే ఏర్పడినదా? దీని స్వరూపమేమిటి? నాకును దీనికిని గల సంబంధమేమి? ఇది ఎంతకాలమిట్లు జరుగుట?' ఈ మొదలగు ప్రశ్నలను వేసికొని సమాధానమునకు సమస్వయమునకు యత్నిస్తాడు మానవుడు. జీవకోటిలో మానవునకు తప్ప ఇతరముల కిట్టి విచారణ మెక్కడిది! తలంపెక్కడిది!

కావుననే వేదాంతపు పాటగాడిల్లన్నాడు:-

“మాధవుదలచే మానసమైతే
మానవజన్మం బెత్తవలెన్
మదమున చెడి తిరిగేటట్లయితే
మహిషంబై జన్మింపవలెన్”

దీనినిబట్టి మహిషాదుల జన్మముకంటె మానవుని జన్మలో గల విశేషము-మాధవుని తలంచు మానసము గలిగియుండుట. ఇచ్చట మాధవుడు సృష్టికర్తకు ఉపరిక్షణము. అనగా తానుమట్టితో కుండలు, చెంబులు చేసినట్లుగానే తన కవగాహనకాక దిగ్భ్రమ గొలుపుచున్న యీ విశ్వాన్ని అంతే నిర్మాణము చేసినడుపుచున్నవాడు-ఒక సృష్టి కర్త-ఉన్నాడని మానవుడు తన మానసికశక్తిచే ఒక నిర్ణయము చేసికొన్నాడు.

ఈ జీవితమున తనకుగలుగు ఇష్టానిష్టములు, సుఖదుఃఖములు మొదలగునవి ఆ సృష్టికర్త అనుగ్రహోపగ్రహములచే కలుగుచున్నవని యెంచి అతనిని తలంచి పూజించుట వలననో, అతనికి రూపకల్పనచేసి అర్పించి, కానుకల సర్పించి, అతని నామస్మరణ చేతనో, అతనికిప్రియమైన వారిపైనో లేదా ఏమతకర్తలపైననో, తన పాపకర్మముల భారమును బడవేయుట చేతనో, తనకు కలుగు లేదా ముందు కలుగనున్న కష్టములను తొలగించుకొన యత్నించుచున్నాడు. కాని ఈ మతకర్తల మార్గములు భిన్నములగుటచేతను, వారి అనుయాయులు వారిని సరిగ్గ అర్థము చేసికొని యనుసరించలేకపోవుట చేతనో - ఇవి జనులలో శాంతికి బదులు వైషమ్యమునకు, సుఖమునకు బదులు దుఃఖమునకే కారణములు కాజొచ్చినవి. కావుననే అత్యంత సుఖమును, శాంతిని అభిలషించిన మానవునకు, ఈ మతకర్తల

వలన ఒకేయొక దేవుని పూజించుట ద్వారా తృప్తి కలుగలేదు. ఈ లోకములోని హెచ్చుతగ్గులు, అనుభవించు దుఃఖములు - వీటికి తోడు అనుక్షణము తప్పనిసరియగు మృత్యుభయమొకటి వెంటాడుచున్నది. 'మానవుడెట్టి ప్రజ్ఞావంతుడై, ఎంత చేసినను తుదకు మృత్యువు వాత బడుటకేనా! ఎందుకిట్లుగుచున్నాడు? సృష్టికర్తకిదే పనియా? దానివలన నాతనికి గలుగు ప్రయోజనమేమి? ఇది ఎంతకాలము నుండి జరుగుచున్నది? దీనికి అంతము కలదా? ఇందలి పరమార్థము - పరమసత్యము ఏమి?' అను జిజ్ఞాస మానవునకు కొన్నివేల సంతృప్తముల క్రిందటనే కలిగినది. తత్త్వదర్శనమునకై హైందవుడు కొన్నివేల సంవత్సరముల క్రిందటనే యత్నించి నాడు. కాని తత్త్వమనేకుల కనేక విధముల పాడగట్టినది. తత్ఫలితముగ పెక్కు దర్శనములు బయలుదేరినవి.

'ఈ శరీరమే ఆత్మ. ప్రత్యక్షమే ప్రమాణము. ఈలోకములో సుఖ-మనుభవించుటయే పరమార్థము. శరీరపతనముతోడనే జీవిత సమాప్తి. అర్థకామములే మానవుని పురుషార్థములు' - అని చార్వాకదర్శనము గ్రహించినది. లోకమునగల దుఃఖమును నివారించు ఉపాయమునే బౌద్ధదర్శన మన్వేషించినది. మరికొన్ని దర్శనములు ప్రకృతితత్త్వమును పరిశీలించి, విశ్వరూపము యొక్క సహజ లక్షణమెట్టిదో, పురుషునకు, లేదా వ్యక్తికి ఈవిశ్వమునకు గల సంబంధమెట్టిదో విచారింపయత్నించినవి. అణు సంయోగము వలన ఈ విశ్వనిర్మాణము జరుగుచున్నది. బంధమోక్షములకు, సుఖదుఃఖములకు మనస్సే కారణమని, విశ్వరూపము యొక్క తత్త్వజ్ఞానముచే నిశ్చేయనము - అత్యంత సుఖము గలుగునని న్యాయవైశేషికములు కనుగొన్నవి.

ప్రపంచమునకు మూలము త్రిగుణాత్మకమగు ప్రకృతి. దీనికతీతుడు పురుషుడు. ప్రకృతి సాన్నిధ్యముచే కలిగిన అవివేకము వలన పురుషుడు దుఃఖములనుభవించుచున్నాడు. తానే నిత్యచైతన్యస్వరూపుడనని, దిక్కా-లాతీతుడనని యోగ వద్దతినవలంబించి స్వస్వరూపమును గ్రహించినచో ముక్తుడగుచున్నాడు - ఇది సాంఖ్యదర్శనము. వ్యక్తివిశ్వములకు గల సంబంధమును - తత్త్వమును, వేదాంత దర్శన మింతకంటెను బాగుగా దర్శించినది. విశ్వమంతయు ఏకైక పురుషుడగు పరమాత్ముని స్వరూపమే. ఆతని యవయవమేకాని, వేరుగాదని ఋగ్వేదమే పురుష సూక్తమున వ్యక్తముచేసినది. చరాచర విశ్వమంతయు చైతన్యస్వరూపుడగు పరమపురుషుని విరాట్స్వరూపము. 'నేను-నాది' అను అహంకారము గల వ్యక్తులన్నియు ఆ పరమ-

పురుషుని ప్రతిదిణ్ణములే. ఈ వేదము- అనగా జ్ఞానము యొక్క అంతమే-చరమ భాగమే వేదాంతము. సత్యమనునది బ్రహ్మ ఒక్కటే. సర్వము బ్రహ్మ స్వరూపము. అదే ఆత్మ. ఈ ఆత్మ సర్వవిశ్వములోను ఇమిడియుండి, దానికతీతుడును అగుచున్నాడు. ఆ సర్వములోనే చేరిన ఈ వ్యక్తి ఈ సర్వము అనేది తనకంటే భిన్నము కాదను భావమును అనుభవమునకు తెచ్చుకొనుటయే ఆత్మపరిజ్ఞానము. విశ్వరూపమును స్వస్వరూపముగా తెలిసికొన గలిగిన వ్యక్తి ఆత్మస్వరూపమును తెలిసికొనిన వాడగుచున్నాడు. అప్పుడు ‘వ్యక్తి వేరు, విశ్వము వేరు. ఆత్మ వేరు, పరమాత్మ వేరు’ అను భావమే లేకుండును.

ఉన్న సత్యము - సత్తు - ఒక్కటే. దీనినే (ఛాందోగ్యోపనిషత్ 6.2.1),

“సదేవ సోమ్యేదమగ్ర ఆసీత్ -

సర్వం ఖల్విదం బ్రహ్మ

నేహ నానాస్తి కించన”

(కఠోపనిషత్ 2.1.11)

ఇత్యాదుప్రసిద్ధావ్యక్తములు తెలుపుచున్నవి. ‘నేను’-అనుకొనుచుండు వ్యక్తి ఆ అహంభావము కలిగిన వ్యక్తి కూడా ఆ బ్రహ్మయే! కావుననే “తత్త్వమసి” (ఛాందోగ్య 6.8.7) అని ఉపనిషత్తు చెప్పినది. ఈ వ్యక్తి యొక్క వ్యక్తిత్వాన్ని పోగొట్టుట కొందరి కిష్టములేకపోయినది. ఆ సత్యాన్ని విశిష్ట సత్యము చేసినారు. అద్వైతము, విశిష్టాద్వైతమైనది. సత్యము - “ఏకమేవాద్వితీయం” కావలెగాని సత్యానికి ఇన్నివిధముల సత్యములుండునా?

ఈ విషయమునే “తత్త్వమసి” అని ఉపనిషత్తు వ్యక్తము చేసినది. అయితే ఈ భేదమెందుకు వచ్చినది? ఆ భేదమేల చెప్పవలెను?” అని ప్రశ్న. ఈ భేదము అవిద్యాకల్పితము. అజ్ఞానము చేనేర్పడినది. నామరూపమయమగు ఈ విశ్వమంతయు అజ్ఞాన కల్పితమే. వస్తుసంయోగము వలన ఏర్పడిన రూపముతో కూడినదే. సంయోగము వియోగమును తేకమానదు. రూపము మారవలసినదే. దృశ్య ప్రపంచ మంతయును అట్లేమారిపోయి మూలద్రవ్యము యొక్క రూపమును పొందవచ్చును. ఆ మూల ద్రవ్యరూపమెట్టిదగునో మానవుడీ కాలమున ప్రకృతికాస్త్ర పరిశోధనల వలన గూడ కనిపెట్టినాడు గదా! ఒకభాగము ప్రాణవాయువు, రెండు భాగములు

ఉదజని కలిసి నీటిబిందువగుచున్నది. ఈ బిందువు మూలరూపమును చెందవచ్చును. ఆ మూల రూపమనబడు వాయువుల కింకను మూలరూపము కలదు గదా! ఆ రెండు మూలపదార్థములలో భిన్నత్వమెట్లేర్పడుచున్నది? శక్తిస్వరూపములుగా గ్రహింపబడిన 'ఎలక్ట్రానుల' అమరిక, చలనములోగల భేదమే ఈ మూలపదార్థముల భిన్నత్వమునకు కారణమగుచున్నది. మనవారి శక్త్యారాధనము విశ్వచైతన్య స్వరూపా రాధనమే. దీనికి దేశకాలావధులు లేవు.

అనంతము, అపారమునగు ఈ విశ్వప్రపంచమున ఒక్క-మూల, భూభాగముపై అనుకూల పరిసరపరిస్థితులు కలిగిన చోట వింత మానవశరీర రూపమొకటి యేర్పడగా, సర్వాంతర్యామియై, సత్యస్వరూపమై యున్న పరమాత్మయే, అందునుజేరి, ఆ క్షేత్ర స్వభావమును బట్టి సుఖదుఃఖానుభవాలను బొందుచు, అజ్ఞానావృతుడు, తిరోభూతుడనై, ఈ శరీరమే తానను అహంభావమును పెంపొందించుకొనినవాడైనాడు. ఇట్లుజ్ఞానతిరోభూతుడై శరీరమే తానను నహంకారము వహించిన ఆపరమాత్మరూపమే మనకిప్పుడు విమర్శనీయుడైన 'వ్యక్తి'. పాంచభౌతికమగు ఈ శరీరమున జేరుటతోడనే ఈతనికొక వ్యక్తిత్వము - అనగా ఆపరమాత్మ నుండి ప్రత్యేకత - జీవాత్మరూపమగు ప్రత్యేకత - వచ్చినట్లయినది. తానీ శరీరముతో ఏకీభావమునొంది, ఈ శరీరమందమర్పబడిన ఇంద్రియముల ద్వారా తానంతఃకరణరూపమున నుండి - నామరూపలక్ష్మితమగు బాహ్యప్రపంచమును - ఈ విశ్వరూపమునుతనకంటె భిన్నమైన దానినిగా గ్రహించుచున్నాడు.

వర్ణైవర్తు అను ఆంగ్లకవి అమృతత్వమును గూర్చి వ్రాసిన కావ్యములో చెప్పినట్లుగా ఈ లోకమున జన్మించిన శిశువు అమృతత్వమహా సముద్రము నుండి ఒడ్డునకు కొట్టవేయబడినవానితో సమానము. ఆ ఒడ్డున ఉన్నంత వరకు ఆ లోకపు అమృతత్వమింకా ఆతనికి కనబడుతునే ఉంటుంది. ఈ లోకపు గొడవలు ఆతనికిమీ అంటవు. నిర్వికారుడు, చిదానందరూపుడుగా ఉంటాడు. క్రమముగా ఎదిగిన కొలది, ఆ ఒడ్డు నుండి ఈ లోకములోనికి ప్రవేశిస్తాడు. అప్పుడు అతనికి అమృతత్వ సముద్రము క్రమముగా దూరమై ఈలోకములోని గందరగోళములో తాపత్రయములో పడిపోతాడు. కావున శిశుత్వములో ఆతనికి సత్యస్వరూపము భాసెందని చెప్పవచ్చు. క్రమముగా ఇంద్రియములు పనిచేసిన కొలది అవిద్యాకృతమగు విశ్వరూపేంద్ర

జాలములో తగులుకుంటాడు. ఎంతో సత్యమనే నమ్మి దానివలన కలుగు సుఖదుఃఖములను అనుభవిస్తాడు. కాని ఒక చిత్రము - అంతఃకరణము పనిచేయనప్పుడు, పరాకుగానున్నప్పుడు కళ్లు చూస్తున్నా ఎదుటనున్న వస్తువు ఈతనికి కనబడదు. తాత్కాలికంగానైనా శూన్యమనస్కునకు విశ్వమంతా లేనట్లే అవుతుంది. అనగా విశ్వము చూచేవాడుండి చూస్తే వున్నదన్న మాట. లేకపోతే లేదు.

వ్యక్తికి ఈ విశ్వము లేకపోవుట కేవలము ఆతడు పరాకు చిత్తగించినప్పుడే కాదు, గాఢ సుమప్తిలో కూడలేదు. శరీరముతో కలిసి అహమనెడి భావనతో ఇంద్రియములను పనిచేయించుచున్న వ్యక్తికి విశ్వమంతా ఉన్నది. దాని నుండి తొలగి సాక్షాత్తుడైన వానికి - అనగా ఆత్మకు విశ్వములేదన్నమాట. ఇదే ఆత్మస్వరూప లక్షణము. శిశువునకు, సుమప్తిలోనున్న వానికిని ఈ విశ్వము లేకపోవుట తాత్కాలికమే. లోకజ్ఞానము కలిగిన పిదప శిశువునకు నిద్రమేల్కొన్న వ్యక్తికి విశ్వము మరల సాక్షాత్కరిస్తున్నది. ఎందుచేత? ఈ శరీరమునకు సంబంధించిన వాసనారూప కర్మ వలన. ఈ శారీరక బంధమును త్రెంపి వేసి, అవిద్య నుండి తొలగించి, అహంత్యమునువదలి తన సర్వాంతర్యామిత్వమును గుర్తించినప్పుడు ఆత్మపరిజ్ఞానము, స్వస్వరూప ప్రత్యబిజ్ఞ కలుగుతుంది. సచ్చిదానంద స్వరూపుడగు పరమాత్మ ఎందుకీ బాధ అంతా పడవలే? - అని ఒక ప్రశ్న. పరమాత్మకీ బాధ ఎప్పుడును లేనేలేదు. ఆతడు చైతన్యస్వరూపి. సర్వశక్తిమంతుడు. సర్వాంతర్యామియగు సర్వాతీతుడు. అనిర్వచనీయమగు ఆతని సహజ చైతన్యశక్తి మూలముగా ఈవిశ్వము భాసించుచున్నది. ఆతని శక్తిలో ఆతడు లేడనుట సంభావ్యముకాదుగదా. కావుననే ఆతని మూలముగా భాసించిన యీ విశ్వములో ఆతడును సర్వాంతర్యామియై యున్నాడనుట.

ఆతడొక మాంత్రికుడు. ఆతని మాయాశక్తిచే విశ్వము భాసించుచున్నది. నిత్యసత్యస్వరూపుడగు నాతనికి ఆద్యంతములు లేనట్లే. ఆతని శక్తివలన కల్పితమయిన ఈవిశ్వమునకును ఆద్యంతములు లేవు. ఐంద్రజాలికుని కల్పితవస్తు ప్రపంచమును వాస్తవమనుకొని, చూచి మనము ఆనందించుచున్నట్లే, ఈ మాయా విశ్వములో శరీరబద్ధమై ఈవిశ్వములోనే యుండి దానియొక్క తత్త్వమును గ్రహించుటకును ఈవిశ్వావకాశముయొక్క హద్దును, కాలపరిమితిని తెలిసికొనుటకై పరిశోధనలను సల్పిసల్పి కాలావకాశముల కంతములేదు, అవి అనాదులు అను సిద్ధాంతమునకు

ఇప్పుడిప్పుడే వచ్చుచున్నది. మనకు అనగా భూగోళమునకు సమీపస్థులగు నక్షత్రము యొక్క దూరము ఆరుకాంతి సంవత్సరములనియు, ఇప్పటికీ తెలియవచ్చిన అతిదూరస్థులగు నక్షత్రము యొక్క దూరము - కొన్ని కోట్ల లక్షల కాంతి సంవత్సరములనియు ఈకాలపు ప్రయోగ పద్ధతిని తెలిసికొన గలిగిన సిద్ధాంత విషయము. ఇంకను తమకాంతి భూమిమీద పడుట కవకాశము లేనంతటి దూరములో కొన్ని నక్షత్రగోళములున్నవని ఊహించుచున్నారు. ఇక ఇట్టి పరిమితిగల విశ్వమునకు కారణభూతమైనవని తలంపబడిన పరమాణువులను భేదింపగా ఇంకను సూక్ష్మతరములైన సంతతచలనశీలములైన శక్తిరూపములగు 'ఎలక్ట్రానులు' పాడకట్టుచున్నవి. వీనికలయికలోగల భేదమే మూలధాతు భేదమునకును, విశ్వనిర్మాణమునకును కారణము! బాహ్యప్రయోగ పద్ధతిని ఇటీవలే కనుగొనబడిన ఈ విషయము ఇంతకు పూర్వమే అంతరంగికమగు యోగపద్ధతిని ప్రాచీనమహర్షులు కనుగొనియున్నారు. అణోరణీయాన్ మహతో మహీయాన్, ఆత్మాన్య జంతోర్నిహితో గుహాయాం (కఠోపనిషత్, 1.2.20) అని చెప్పి, 'దిక్కాలాద్యనవచ్చిన్నానంత చిన్నాత్రమూర్తి' (భర్తృహరిసుభాషితం, 1) ని గూర్చి ఆతని ఇంద్రజాలమును గూర్చి చెప్పుట సాధ్యముకాదు గావున స్వానుభూతిచే గ్రహంపవలసినదేయని ఆతనికొకనమస్కారము చేసినారు.

ఇట్లు విశ్వములో నుండి విశ్వరూపతత్త్వమును తెలిసికొనుటకై శరీరబద్ధుడగు ఈవ్యక్తియవలంబించిన ప్రయోగపద్ధతివలన కలిగిన ఫలము, ఆకాలమునందలి యోగపద్ధతి సాధించిన విషయమొక్కటిగానే కనబడుచున్నది. విశ్వతత్త్వమును గూర్చి సాధించిన జ్ఞానములో సామ్యమున్నను, దాని వినియోగములో మాత్రము ఆసామ్యమగపడుటలేదు. ప్రాచీనయోగ పద్ధతి "యద్వ్యశ్యం తన్న్యశ్యం" అని ఇది ఐంద్రజాలికుని మాయవంటిదని గ్రహించి, అవిద్యను తొలగించుకొని శరీరసంబంధము వలన కలిగిన అహంభావమును వదలినచో, మృత్యువునుదాటి ఆత్మపరిజ్ఞానము నెఱిగి, అమృతత్వమును పొంది, మహాంబుధిని మరల తేలగలవని సూచించుచుండగా - ఈ ప్రయోగపద్ధతి ప్రకృతినింకను సాధించి ఆత్మభరిత్యమున కుపయోగించుకొను ఉత్సాహమును ప్రేరింపించుచున్నది వలె నున్నది. కావున ప్రతివ్యక్తిన్నీ తనశరీరమువలెనే విశ్వరూపముకూడా అనవరతము మార్పులను పొందుతూ ఎప్పటికైనా నశించేదే

అనిన్నీ, ఐంద్రజాలికుడు కల్పించిన పస్త్రపుకంటె భిన్నముకాదనీ తెలిసికొని, దానిని వశము చేసికొని తాత్కాలికానంద మనుభవింపవలెననియేగాక, ప్రకృతిని వశము చేసికొని నవ్వునవ్వరావమును తెలిసికొని శాశ్వతమగు ఆత్మానందానుభూతిని బొందవలయునని యత్నించుట శ్రేయస్కరము.

గుత్తము గ్రక్కిఁజేయుటంట; *గూబన రవియున్(?);
హత్తెననఁ దగిలెనంటయుఁ;
దత్తురమనఁ దక్కిడనుట దనరారు భువిన్.

* 'గుహయన భవియున్' - అని యుండవచ్చు.

తే.గీ. రోజునా మూల్గు; కల్ల కాటుటయనంగ;
ముంగిలికి మండువాయు; బెడంగు బింక;
మొప్పజేయుట కావించుచొప్పుచుండు;
గట్టువిలుదాల్చి! మువ్వీళ్లు గొట్టు వేల్చి!

తే.గీ. కను అనాఁ బూప; పసుపు చిక్కసమనంగ;
నెయనంగను హత్తిమార్తురకుఁ బేరు;
పరగు వేగంటిసింగాణి కొరడునాఁగ;
వటలు వెలివేల్చి! ముమ్మొనవాలుదాల్చి!

8

తే.గీ. రహియనా మాదిరియు; రంతు, రవళియనఁగ
నమరు సయ్యాట; సరసంబునగు నలరసఁగ;
గోళ్లరంతున కొప్పుఁ బోకిళ్లు, మెట్లు;
గట్టువిలుదాల్చి! మువ్వీళ్లు గొట్టువేల్చి!

9

తే.గీ. తొడిమనా వీడ గెలి; సంచు, వడి, నిమిత్త
మమరు; నట్టువ హల్లీసకంబనంగ;
హరువునాఁగ నుపాయంబు కరయఁగాను
నామమౌ; దంట! జోగిబార్హమువంట!

10

ఇటీయుటనఁ గదియుటనఁదగు;
 నటయనగా సందియమున కగు నొగిజేరున్;
 పోఁటఁడనం గుఱుమట్టము;
 కఱదలనం బుద్ధులొప్పుఁ గబ్బంబులలో.

11

తే.గీ. ఈలనా సైగ కమరుఁ; దక్కలునాఁగ
 వఱలు జాయకమగును; మైమఱువనంగఁ
 గంకటంబగు; బామెలు పాంకముగను
 బూటకము కొప్పు వెలివేల్పు! నీటితాల్పు!

12

క. మఱియొకటి పెరయనంగా;
 * వలియనగా సీతుపేరు వఱలును పుడమిన్;
 మొఱకనఁగ వెలితియంటయు;
 నరయుఁడు కఱివేల్పుపిట్టనందగుఁ దెనుఁగున్.
 * ఈరెండవ పాదమున ప్రాసమై త్రి తప్పినది.

13

క. కరువనఁగ మూస కొప్పును;
 కరువలికూసనఁగ హనుమ; గబ్బన గామున్;
 సురఁటియగు సీవిరనఁగను;
 కురుఱాలునాఁ గొత్తళములకును దెనుఁగులలో.

14

- క. కొలుపె(?) యనంగను పెద్దయుఁ
గలనాఁ గల్గుటయు; హెంతకార్యనంగా
వలఁతయనందగుఁ; జిమ్మనఁ
జిలుకుల బలువాడి కొప్పుఁ; జిలుకనఁ దూపున్.

15

- క. తరమనఁగ వల్లయంటయు;
హెరదియనా మిన్నయంట; హెన్ను పసిడియున్;
బరఁగును నారటమనఁగా
నిరవొం దారటమునకు నింపు తెనుఁగునన్.

16

- క. క్రోవీయనఁగా నరాలగు;
రావొడియన నాకుఱాత రాచిన పాడియున్;
కోవనఁగ, నేపు, లావనఁ
గా వర్తిలుఁ జేవయంట కబ్బంబులలో.

17

- క. కడియనఁగాఁ దావియుఁ; బ్రే
ముడియొఁ బోరామినాఁగ; ముద్దుగనా నే
నడరును; రారాపన రా
పుడు; మారాముడులనంగ భువి నగవాట్లె.

18

తే.గీ. కోచనా బందయోః ద్రస్తరింపనాద
రంబు; నొడికము చొడోలనంబరంగుః
బావడలునాగఁ బేరు తాబందులకును;
గట్టువిలుదాల్చు! మువ్వీళ్లు గొట్టు వేల్చు!

19

క. ఒడ్డిగలన గరిఁపెలు; ము
జ్జిడ్డనగా బేసి యనుట చెలువొందు భువిన్;
గిడ్డియనా వెలియాపును;
నొడ్డిలనఁ బాపురాల కొప్పుఁ దెనుగునన్.

20

తే.గీ. ఉక్కిశంబనఁ గావలి కోలిఁ బేరు;
బండి గాడియు; మొగసాల గరిడియనగఁ
జను; జగాయన్న గొనబు; నిష్పలము వీటిఁ
బుచ్చెనా; వెల్లవేల్చు! కేల్ పుచ్చెదాల్చు!

21

క. బంటియనా లోతనదగుఁ;
దుంటయనగ నించు పేరు దొడరుఁ దెనుగునన్;
నొంటరగు జెట్టి; మల్లన
దంఱై గెల్పుటకుఁ బేరు దగు వెలివేల్చా!

22

తే.గీ. పక్కెరనఁ బేరు వారువం; బుక్కెరనఁగఁ
బిండివంటయు; బెగడునా బీతుపేరు;
పబువునకు నొప్పు సామ్రాణి; కుబుసమనఁగఁ
గురుజా; వెలివేల్చి! మువ్వీళ్లు గొట్టు వేల్చి!

23

క. మురియలనఁ దుండెముల కగు;
బిరబిరయనఁగాను వీడఁ బెంద్యరలకగున్;
పరుజాలనఁ గత్తి పిడులగు;
మఱి దెప్పరమనఁగఁ దెంపుమాటడరు భువిన్.

24

క. పొలిమనఁ బోడిమన రూ
పొలిని బేరలరుచుండు నుజ్జ్వలముగనున్;
కూళయనఁ జెనఁచికగు; హే
రాళం బోలంబులేక రాగిల్లుటగున్.

25

తే.గీ. అరవడి యనంగ నెత్తంబు కగును పేరు;
సువ్వెనాఁగఁ జామీనాఁగఁ జావెయంట
గొఱలు; గందువలనఁ జమత్ప్రితుల కొప్పు;
దోలుదాటువ! ముమ్మొన వాలుదాల్చి!

26

- క. చిన్నారి, యనా యన్నను
 సుడికిన్;
 మున్నరకము, మొక్కలపా
 టన్నను జవ్వనపుఁ జెయువు లచ్చతెనుఁగునన్.

27

- తే.గీ. జియ్యనా హేడ్డు; తలఁపు రాజీయనంగఁ(?);
 జెందపాడి మ్రుగ్గు; టోలాయు బృందమనఁగ;
 గగనమన నొప్పు *జతనంబు(?); కాసెయనఁగ
 దట్టి; తెలివేల్పు! మువ్వీళ్లు గొట్టు వేల్పు!
 *‘జమనంబు’ - కావచ్చు.

28

- తే.గీ. చీడ టిరులన్న; సాన తేగా యనంగ;
 సురియనాఁ జివ్వ; ఊననా సుద్ది కమరుఁ;
 దండువన గంటె; వట్టె ముద్దండమనఁగఁ;
 జెట్ట తొలివేల్పు మువ్వీళ్లు గొట్టు వేల్పు!

29

- తే.గీ. లాగులిడెనాఁగ నొప్పు మేల్ నాగవాస
 పు లతకూనలు బట్టు మొగ్గల కెసంగు;
 డుస్సెనాఁ గాడెనంబయు; డులిచెనాఁగ
 నెడపెనంబకుఁ దెలిదాలు దొడుకుసాని!

30

క. కమ్మని గందమ్మగుఁ గల
పమ్మన; గొజ్జంగులనఁగఁ బన్నీరులకున్;
ముమ్మరమన నెంతేనియుఁ;
దెమ్మనమనఁ బాసె మచ్చతెనుఁగునఁ దనయన్.

31

తే.గీ. సద్దనఁగ గల్చి; చక్కెట్లు దిద్దుటనఁగ
వన్నెగల తాయమై లాఠివారి గొనము
లెంచుటకుఁ; గేరునా నిరసించుటయును
గట్టువిలుదాల్చి! ముప్పీళ్లు గొట్టు వేల్చి!

32

తే.గీ. కొణిగెలన బకదార్ల బాకుల కెసంగుఁ;
గొడువునా గోటికాడను నుడువు కమరుఁ;
గడుపు తీటన గుమ్మెటం బడరుచుండుఁ;
బబలు నెలతాల్చి! జేజేల పాలి వేల్చి!

33

క. గొరలేమలు గొనయమ్ముల
వఱలఁగ వాయించు వస్తువగు రవణమనా;
నెఱిఁ దప్పెటగును తమటము;
మఱి కిన్నెరకట్టె కమరు మంచాళువనన్.

34

తే.గీ. ఈసనగఁ గిన్న; హాసునా నింపుకమరు;
గణితమన నెంచు; బెడిదంబుననగఁ జేటుపు;
కుదురుగా నిల్పుటకుఁ బాదుకొల్పెనాగ
పటలుఁ; దెలివేల్పు! ముమ్మొనవారుదాల్పు!

35

క. ననజీలన విరిదేనెకుఁ
దనరు; హళాహళి కెలుంగు; వలపనఁ గడికిం
జను; నెలగోలనఁ గాడికి
నొన; రువ్విళ్ళూరు లొట్టయొప్పుఁ దెనుఁగునన్.

36

తే.గీ. డంబు తలవాకి తెన్ను వచంబులకును;
గిళ్లనాగఁ బోనాడుట, క్రేణినాగ;
మొగియనన్ మాటు; జవ్వాది కగుఁ బునుంగు;
కట్టు మువ్వన్నె! మువ్వన్నె బట్ట మన్నె!

37

క. చొననాగ మీరి చిటుతలు;
మనుగుడు పల్లెంబు; దొడ్డమానిసి మగవాఁ
డన నొప్పు; మల్లలను పే
ళ్లను బొందును చుట్టుగుల్ల లచ్చతెనుఁగునన్.

38

తే.గీ. చుంగనఁ జెఱంగు; పరుసంబనంగ నుదిరి
నీలరికీ(?), గట్టు కొగి నొప్పు; దీటు మాద్రి;
కొరగెనా రాలుబయుఁ; గోర్కొ కొఱలు, తవివి;
వఱలు తెలివేల్ప! ముమ్మొనవలుదాల్ప!

39

క. వీడనగా వాడయు; జ
వ్వాడెన నసియాడుటకును; వావిరి నలికిన్;
కాడలనఁ గల్ప తామర
తూడులగును; దొంతులనఁగ దొంతరలకగున్.

40

తే.గీ. గునియుటన విట్టవీగెనాఁగను జెఱంగుఁ;
గమ్మసింగాణి దొరహుమా గణియనంగ;
విక్కెనా హాళి; నత్తునా ముక్కెఱకును
నామమౌ; దంట! జోగిబార్హముపంట!

41

క. రువ్వెననా రుప్పుట కగుఁ;
జివ్వెననాఁ గోసనంట; జీలనగా నున్
జవ్వని చనుఁగొనలను సాన;
మవ్వము పరువంబు తెనుఁగుమాటల నోజన్.

42

తే.గీ. నాలినాఁ జెల్లు సయ్యాట; కోలగమునఁ
బ్రబ్బుకొనెనాఁగ నంతటఁ బ్రాకెనంట
కమరు; నంకించెనాఁ బట్టుటమరు భువినిఁ
గడుబెడంగుల వెలలేని తొడుకుసాని!

43

తే.గీ. కాటియలనంగ వెళలు;
..... జడికారు, వేసవికారు, వడఁకుఁ
గారునకు నొప్పు; నామునాఁ గావరంబు;
గట్టువిలుదాల్చి! మువ్వీళ్లు గొట్టు వేల్చి!

44

క. కట్టల్క కరంబల్లుట;
చిట్టైమువిడుటనఁగఁ బనులు

మిక్కిలి సూటాణి కగును వ్రటునన్.

45

క. దోగెనన జోగెనంటయు;
లాగులునాఁ జల్లిదాలు; లాడీలనగా
బాగుగ గుంజరికుం దగు;
లాగయనా నెఱియ యనుట లా ...

46

తే.గీ. బ నాగ
లామునా(?); చాధునా తాను; రాపుడనగ
గుఱుతు మీఱంగ రాయిడి కొరలుచుండుఁ
బబలు నెలతాల్ప! జేజేలపాలి వేల్ప!

47

ఆ.వె.
..... ట్ట నాగ రవణి; తొట్టనాగ
జోతి కంబమునకు; జోక చొకారంబు;
వెల్లవేల్ప! గట్టువిల్లదాల్ప!

48

క. తెలిపిట్ట బోదెలన నం
చల కొండికలకుఁ జెలంగుఁ జాగనగా(?) రె
తులకోరి ములికి వాడికి;
లలి, నెఱి, యెమ్మైనగ గొనబులకుఁ దెనుగులలోన్.

49

తే.గీ. కోపులన వింటితుదలు; తారీపులనగ
గొనబులతకూనయొక్క జగ్గుల కెనంగు;
నామునాఁ గఱ; నడకకు నడయనంగ
నామనౌ; దంబ! జోగిబార్షముపంబ!

50

తే.గీ. రచ్చకొట్టలునా హజారంబు; నలఁడు
నాఁగఁ బూతయు; మేల్పూతనాఁగ అవికె
కమరుఁ; బూరెమ్మలన రెబ్బలలరుచుండు;
గట్టువిలుదాల్చి! మువ్వీళ్లు గొట్టు వేల్చి!

51

క. గాణయనఁ బాటకుఁడు; సిం
గాణియు సింగిణి కెనంగుఁ; గంగగు మఱి పై
తాణియుఁ బైతణి తగ;
* నాణెము మేల్పంతి; నీటిగకు(?) మబ్బుననన్.
* ఈ పాదమున యతిమైత్రి తప్పినది.

52

తే.గీ. జొచ్చిలెననంగ నాను; జాలెత్తుటనఁగ
జాల్గొనుట కోజ రాగిల్లు; జాదుననఁగఁ
గ్రచ్చుకగు; మాలిమియనంగ మచ్చికయును
నామమా; దంట! జోగిబార్హముపంట!

53

తే.గీ. కైతనా సారులతకూనగాఁ దలంపుఁ;
డీరెనాఁ గీసునా; రయంబెనఁగు లెనఁగు;
లత్తుకన లక్కి; బహుమతులకుఁ జెలంగుఁ
గోవులన వెల్లి వెలలేని కోడెసాని!

54

తే.గీ. మెఱములకు నోలి డింకీలు; మేలు, మెచ్చు
లన మహత్; బాళినా హాళి కొనరుచుండుఁ;
'బాడియే?' నాగ నను సుడి కూడదనుట;
వఱలు వెలివేల్చి! ముమ్మొనవారుదాల్చి!

55

ఆ.వె. కార్యంబనంగఁ గార్యంబు రాగిల్లుఁ;
గ్రాలెనాగ నలరుచోలిఁ బుడమి;
నుల్లఁ ద్రోయుటనగ నొగిఁ గూల్చుటకు నొప్పు;
వెల్లవేల్చి! గట్టువిల్లుదాల్చి!

56

క. కఱకనగ గట్టి; కఱనాఁ
గఱియనుట కెసంగు; మంకు కఱటియనంగాఁ;
గొఱనాగఁ బనియుఁ; బెండెము
బిరుదగు; దొరకొంట మొదలుపెట్టుట కలరున్.

57

తే.గీ. డాలునకు నొప్పుఁ బలక, కేడంబనంగఁ;
గొఱలుటన నిండు; పోకిళ్లు కఱదలనగఁ;
నొరపునా రంగు; బిగ్గర యురవడియును;
గట్టువిలుదాల్చి! మువ్వీళ్లు గొట్టు వేల్చి!

గద్య

ఇది శ్రీ మదుమామహేశ్వర వరలబ్ధ కవితృవైభవ, యమరనామాత్య పుత్ర
పైడిపాటి లక్ష్మణ కవిప్రణీతంబయిన యాంధ్రభాషా రత్నాకరంబను నైఘంటుక
శాస్త్రంబునందు సర్వంబును షష్ఠాశ్వాసము.

అకారాది పదసూచిక

ఈ 'అకారాది పదసూచిక' క్రిందటి సంచికలో (XXVII-1984) ప్రచురింపబడిన ఆంధ్రభాషారత్నాకరము తొలిమూడాశ్వాసములకు, అందులకు 'అనుబంధము'గా ప్రకృత సంచికలో ప్రచురింపబడిన 'షష్ఠాశ్వాసము'నకు - అనగా ఈ నిఘంటువున కంతటికీ - సమకూర్చబడియున్నది.

ఇందలి ప్రతిపదము ఏభాషా భాగమునకు చెందినదో కుండలీకరణములలో నిర్దేశింపబడినది. పదమునకు ఎదురుగా నున్న అంకెలలో మొదటిది ఆశ్వాసమును, రెండవది పద్యసంఖ్యను సూచించునది.

3. JAYANTABHAṬṬA'S NYĀYAMAÑJARĪ (*caturtha-pañcamāhnikā*) with Gujarati translation. Ed. and tr. by Nagin J. Shah. L.D. Institute of Indology, Ahmedabad, 1989, L.D. Series 108. Pages 16+313. Price Rs. 120=00.
4. TRAVERSES ON LESS TRODDEN PATH OF INDIAN PHILOSOPHY AND RELIGION by Yajñeshwar S. Shastri. L.D. Institute of Indology, Ahmedabad, 1991. Pages. VIII + 292. Price Rs. 120=00.
5. ŚRĪMAD APPAYYADĪKṢITA'S SIDDHĀNTA-LESASAṆGRAHA. Text with Gujarati translation. Tr. by Esther A. Solomon. L.D. Institute of Indology, Ahmedabad, 1990. Pages 30 + 591. Price Rs.95=00.

The two works on Jaina philosophy, one work each on Nyāya, Advaita and general Philosophy brought out under the general editorship of R.S. Betai and Yajñeshwar S. Shastri mark a distinction of the dedicated work brought out by the L.D. Institute during the years 1989-1991. At one time, in an attempt to preserve the Vedic texts in tact against the corruption of pronunciation and disuse, as upheld by the Mīmāṃsakas, the Vedic ritual is ordained to be performed only with the Vedic texts. Similarly in the medieval period, again to preserve the Sanskrit texts

of the philosophers, the scholars like Appayya Dīkṣita advocated that the philosophies are to be understood only in the language in which they were written but never through the translations in the regional vernaculars (*Siddhāntaleśasaṅgraha*, p. 21, L.D. Series 114 cited above). But the language cannot be static. Eventhough the roots of culture remain unaltered the needs of the people, including the medium of communication, change demanding the rationale of thinking. Today when the national integration is the urgent need of the day in India, the translation of Indian philosophical literature into all regional languages is a desideratum for diffusing knowledge and dispelling misconceptions. The L.D. Institute of Indology deserves compliments for undertaking the translation of the Sāstra texts into Gujarati.

1. The *Munisuvratasvāmīcaritra* is a poem in 10995 Prakrit Gāthā verses narrating the story of Munisuvratasvāmi by Śrīcandrasūri (1137 A.D.). It gives a detailed account of the nine births taken by Muni Suvrata, the twentieth Tīrthaṅkara of the Jains. The Jain philosophical and ethical doctrines are embeded in poetry, which is in fact the best medium for easy and effective communication. One of the manuscripts used in this critical edition is a copy made five years (18-9-1141 A.D.) after completion of the work directly under the supervision of the author. The book was edited with a Hindi introduction by Pandit Rupendrakumar Pagariya.

2. The *Prasamaratiprakaraṇa* of Ācārya Umāsvāti Vācaka (c.5th century A.D.) is an authentic work on Jaina philosophy and religion. Against the usual practice of writing in Prakrit, this work is written in lucid Sanskrit verse of Āryā metre. The work is divided into 22 sections (*adhikāras*) dealing with passions (*kaṣāyas*), attachment (*rāga*), actions (*karma*), cause of birth and death (*karaṇārtha*), pride (*mada*), conduct (*ācāra*), religious virtues (*dharma*),

religious stories (*kathā*), soul (*jīva*), consciousness (*upayoga*), states of soul (*bhāva*), and so on. Umāsvāti declares "whichever be the way by which the concept of detachment takes firm root, on that particular way repeated practice should be adhered to physically, mentally and vocally" (*Prasamaratiprakaraṇa*, I.16). When read this with Jayantabhaṭṭa's view that the philosophies of the Bauddhas, Jainas, Śaivas, etc., are also equally authoritative (*sarvāgamapramāṇatve nanvevam upapādite/aham apy adya yaṃ kañcid āgamaṃ racayāmi cet/tasyāpi hi pramāṇatvaṃ dinaiḥ katipayair bhavet/tasminn api pūrvoktanyāyo bhavati durvacaḥ* // *Nyāyamañjarī*, p. 86, L.D. series 108 cited above), convinces the universal brotherhood and the common foundation on which the different systems have developed diversely in search of realisation of release from the bondage of birth and death, and cessation of pain. The book was critically edited on the basis of 10 Mss. In the introduction (pp. 1-55) the translator Yajñeshwar S. Shastri has surveyed the contents of the *Prasamaratiprakaraṇa* and its place in the Jain literature.

3. The *Nyāyamañjarī* of Jayantabhaṭṭa (c. 10th cent. A.D.) enjoys a distinction in the Nyāya works for the catholic viewing of different systems of philosophy on the one hand and ornamental style of language on the other. The volume 108 under review contains the 4th and 5th *Āhnikas* of *Nyāyamañjarī* with a Gujarati translation by Nagin J. Shaw. Jayantabhaṭṭa discusses the stand of the Naiyāyikas contrasting from the Mīmāṃsakas and Buddhists on the nature and validity of the Vedas, epics, *purāṇas* and the *āgama* works of the Śaivas, Pāñcarātrikas, etc. in the fourth *Āhnika* and the matters of linguistic interest like the classification of words and meaning, and their mutual relationship, difference between *jāti* and *vyakti*, *apohavāda* of the Bauddhas, meaning of sentence, etc., in the fifth *Āhnika*.

4. *The Traverses on Less Trodden Path of Indian Philosophy and Religion* is a collection of twenty-two research papers in English (18) and partly in Sanskrit (4) on Jainism, Buddhism, Hinduism and literary criticism written by Yajneshwar S. Shastri. There are as many as 12 articles (S.Nos. 1-8, 18-20 and 22) on Jainism, in which the author has compared several concepts of Jainism with Buddhism and Advaita philosophy. For example in the fourth paper the doctrine of Truth of Jainism is discussed in comparison with Buddhism and Advaita Vedānta. There are also five articles on Buddhism (9-13), two articles on Śākta-tantra (14,15). The socio-religious problems, suicide (16) and conduct of monks and householders (17) are discussed in two articles. The single article of literary criticism on the *Naiṣadhīyacarita* stands testimony to the command of the author in Sanskrit and clarity in analysis.

5. The *Siddhāntaleśasaṅgraha* of Śrīmad Appayya-dīkṣita needs no introduction for its place in the studies of Advaita Vedānta. It is certainly commendable that the eminent Sanskrit philosopher Ms. Esther A. Solomon has translated into Gujarathi and the L.D. Institute published it in a good get up. These endeavours may inspire other Indological institutes to undertake translation of śāstra works in vernaculars.

1. THE JOURNAL OF ORIENTAL RESEARCH, MADRAS. Vols. XLII-XLVI, 1972-1977. Ed by S.S.Janaki, *et al.* 1987. Pages viii + 300. Price 60=00.

2. THE JOURNAL OF ORIENTAL RESEARCH, MADRAS [=] DR. S.S. JANAKI FELICITATION VOLUME. Vols. LVI-LXII, 1986-92. Ed. by K.K. Raja, *et al.* 1992. Pages XXXVII + XVII + 440. Price Rs. 175=00.

A tasteful and choosy collection of articles on Indology covering all the fields of study - language and comparative literatures, aesthetics, art and architecture, history and archaeology, philosophy and religion, textual criticism and research methodology, etc. - presented in the two bumper volumes stand testimony to the high quality of on going research on the Indian Culture both in India and abroad. To mention at random, the articles of K.R. Srinivasa Iyengar, S.S. Janaki, K. Krishna Moorthy, V. Varadachari, Wendell Charles Beane, George Abraham, in the number covering vols. XLII-XLVI, throw open new areas of research. There are 20 articles and 45 book reviews.

The bumper number covering the volumes LVI-LXII, contains 40 articles of which three are in Sanskrit and the rest in English. As this is a felicitation volume of Dr. S.S. Janaki, 'the scholars who have contributed to this volume are mostly her friends, colleagues and wellwishers and those who have been guided by her.' 'Ditransitive constructions in Patañjali's Mahābhāṣya' by Madhav. M. Deshpande, 'Mantric Practices and the Nature of Mantric utterance' by Andre Padoux, 'The Practice of Renunciation in Śrīvaiṣṇavism' by Robert C. Lester, 'Linguistic Competence and Performance at different levels' by K. Kunjunni Raja and 'Five Dictionaries in the Telugu Manuscript Collection of the Bibliotheque Nationale Paris' by Gerard Colas and Usha Colas-Chauhan are some examples for citation at random.

Foreword by R.N. Dandekar, *Prastāvanā* by Mandana Mishra and the Report on the Dr. S.S. Janaki Shashtyabhapurti celebrations held on 6-6-1990 show the admiration for Janaki of the litterateur and the Biodata of Dr. Janaki her commitment and contribution to Sanskrit. The Editorial Committee and the management of the KSR Institute deserve to be thanked to dedicate this volume to her, who has been spending all her life

for high level and purposive research in Indology. She richly deserves the honour.

MUSIC AND MYTHOLOGY - A COLLECTION OF ESSAYS.
Ed. by R.C. Mehta. Indian Musicological Society, Jambu
Bet, Dandia Bazar, Baroda-390 001. Pages-Book I : 10,
51; Book II : 104, 2. Price Rs.150=00.

The *Music and Mythology* is a collection of research papers by eminent scholars like R. Satyanarayana, Lewis Rowell, and Sunil Kothari presented in two books combined in one volume. The word *mythology* derived from Greek *mythologic* (< *mythos* 'myth' + *legein* 'speak') meaning 'description of the legendary deeds of gods and men.' These legends (*myths* < *mythos*) embody the social convictions and material progress. The social scientists have offered subtle definitions to explain the nature and fix the boundaries of mythology.

Book I contains three essays of R. Satyanarayana in which he describes historically the relation between myth and music and different types of musical instruments like *mṛdaṅga* and *vīṇā*, gleaned from the legends in the Sanskrit literature. Book II contains thirteen essays contributed by eminent scholars, each one attempting to describe the development of Musicology on the basis of the Indian literature ranging from the *Vedas* upto the texts of music. For example while G.U. Thite presented a paper on 'the Gandharvas and Apsaras in the Veda' and G.H. Tarlekar on 'Some Puranic legends relating to Music', Prem Latha Sharma presented a paper on 'Myths in Saṅgītasāstra' and Usha R. Bhise on 'Vīṇā in Mythology'. There are also some papers of general interest like Jaideva Singh's 'The Nature and significance of Myth', S.A. Dange's 'Protophilosophy in Myths' and Vinayaka Purohit's 'Mythology, Science, Fiction, Music and Marxist Aesthetics'. The volume shall be of immense interest to

those who are interested in the development of Dance, Music and Musical instruments.

SUNDARĪMEGHASAMDEŚA or **DĀKṢIṆĀTYA-MEGHASAMDEŚA** with commentary *Sundarītoṣiṇī* by Veluri Subba Rao. Author, Plot No. 48, Sector XI, M.V.P. Colony, Visakhapatnam-530 017, 1991. Pages 10+107. Price Rs. 60=00.

The *Sundarīmeghasamdeśa* or *Dākṣiṇātyameghasamdeśa* is a long *samdeśakāvya* depicting *vipralambhaśṛṅgāra* 'love in separation' from the pen of the erudite scholar-poet Veluri Subba Rao, who worked formerly as Reader in Sanskrit in S.V. University, Tirupati and retired as Professor of Sanskrit in Andhra University, Visakhapatnam. This poem, composed on the model of the *Meghasamdeśa*, is called *Sundarīmeghasamdeśa*, because the cloud messenger was to go to the newly espoused wife of the poet, Smt. Sitāsundarī, who was separated from her husband, because of the latter's occupation at a distant place. It was also called *Dākṣiṇātyameghasamdeśa* because the route of the cloud is in the southern India from Mangalore on the West coast to Bhimavaram on the East coast via meandering mountains of Sahyadri, rivers Tunga, Bhadra, Krishna and Godavari, holy places like Udipi, Sringeri, Srisailam, Bhadrachalam and magnificent towns like Mysore, Hyderabad and Madras, in Karnataka, Andhra, Tamilnadu and Maharashtra states. The vivid and rapturous descriptions and typify the poetic fancy and simplicity at the heart of the poet.

Even though the poem was started with an aesthetic sense of humour to depict intermitent separation of the poet with his wife, it took a new turn on the mysterious play of destiny when his spouse departed leaving him behind in permanent separation. But she reappeared to the poet in the form of *śraddhā* in the *śāstras* and thus the philosophical thoughts and śāstraic terminology were

couched in romantic lyricism. Not seldom the poet has shown his flare for the idiomatic usage of Pāṇinian Grammar and erudition in Philosophy, particularly in Nyāya, Mīmāṃsā, Vedānta and Buddhism. The author himself appended indexes of ideomatic usages, figures of speech, semantic subtleties, sources of philosophical ideas, and grammatical peculiarities, lest he would be misunderstood. Further he added a short commentary elucidating the appropriate sense intended by him, particularly when double entendre was resorted to. The commentary is indeed *Suhṛttoṣiṇī*, even though it is called *Sundarītoṣiṇī* with a view to perpetuate the name of the dear one of the poet. Her memories remained ever green even after several decades of her demise and hence the poem was never completed with verse after verse being added resulting in a long poem in six cantos with 310 verses in the *mandākrānta* metre. This poem of *vipralambhaśṛṅgāra*, indeed, pleases at once the connoisseur as well as the philosopher alike and leaves an indelible impression of *citra-sāstra-saṁdeśa-kāvya*.
